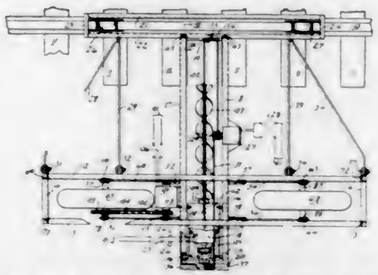
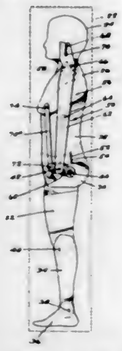
1. A door knob structure for a door having the usual door latch, said door knob structure comprising a knob-supporting member, means stationarily securing said member to the outside of the door, an outer knob mounted on said knob-supporting member, a key-actuated locking means for normally locking the outer knob to the knob-supporting member, a latch-actuating spindle adapted to extend through the door and to be operatively coupled to the door latch, means separate from said key-actuated locking means for normally connecting the spindle to the outer door knob, whereby turning movement of the knob when unlocked will turn the spindle, an inner door knob mounted on and connected to the spindle on the inside of the door and by which the spindle may be turned, and means operative from the inside of the door to disconnect said spindle from the outer knob thereby releasing said spindle for turning movement by the turning movement of the inner knob and simultaneously rendering the outer knob, when unlocked, ineffective to turn the spindle.

2,449,712
HEATING ELEMENT SUPPORT
Harry A. Mulvany, Berkeley, Calif.
Application April 26, 1946, Serial No. 665,076
6 Claims. (Cl. 201—74)



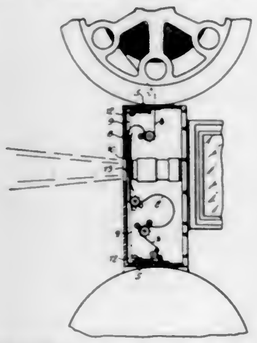
1. An electric heating element support comprising a rectangular shaped base member, a vertically disposed rib formed on one face of the base member and extending substantially from end to end thereof, a finger formed at each end of the rib and spaced from the base member to form a recess at each end of the rib, a head member at each end of the base and spaced away from the adjacent finger, and a lug on each head member extending partially into the recess at the adjacent end of the rib.

2,449,713
COOLING SYSTEM FOR PORTABLE MOTION-PICTURE PROJECTORS
Otto R. Nemeth, Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc., a corporation of Illinois
Application June 14, 1945, Serial No. 599,491
6 Claims. (Cl. 88—24)



1. In combination in a motion picture projector of the character described, means providing a casing enclosure, a lamp housing disposed in substantially the central portion of the housing and having an air inlet opening at the top thereof disposed within the upper portion of the housing, a pair of drive motors located on respectively opposite sides of the lamp housing, air inlet openings in the casing adjacent to one of said motors, means for effecting suction circulation of air into said lamp housing through said top inlet to draw air from within the casing and force an inflow of cooling air through said casing inlet openings, for cooling said one motor, the remaining motor being disposed in a position substantially below the top of the lamp housing and having an impeller fan, and said casing having an exhaust opening adjacent to said impeller fan for the discharge of air from within the housing past said remaining motor and to supplement the cooling action of air circulating within the housing by forcing circulation of air in the lower part of the housing in addition to the circulation in the upper part of the housing induced by suction of air into the lamp housing.

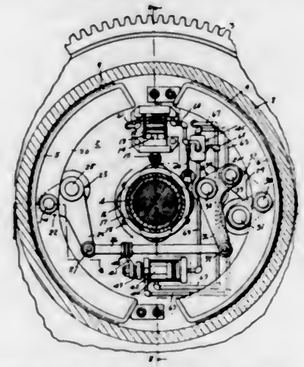
2,449,714
BALLAST STRIPPER
Dennis M. Praytor and Knox Kershaw, Birmingham, Ala.
Application March 29, 1946, Serial No. 658,123
7 Claims. (Cl. 37—104)



1. In apparatus for stripping ballast from between the cross ties in a railroad track, a main frame extending alongside the track, supporting wheels for the main frame at least one of which is motor driven, transverse frame members joined to the main frame and overhanging the ends of the cross ties, and a reciprocable motor driven augur carried by the transverse frame and adapted to enter between the cross ties.

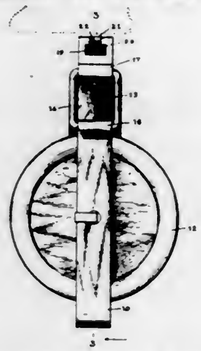
2,449,715
POSTURE DEMONSTRATING DEVICE
Albert Bruce Puddicombe, North Hollywood, Calif., assignor to Bernard H. Stauffer, Los Angeles, Calif.
Application August 19, 1946, Serial No. 691,536
2 Claims. (Cl. 35—29)

1. In a device of the character described, two articulated parts formed in simulation of corresponding parts of the human body, and means to move said parts to and from a normalcy compatible with accepted standards of correct human posture when in standing position, said means comprising two metal straps, one of said straps being hingedly joined to a head part and a trunk part of said device, the other of said straps being hingedly joined to the chest part of said device, both of said straps also being hingedly connected with the hip part of said device, and a lost motion means operating between said hip part and said trunk part, whereby upon clockwise rotation of said hip part said trunk part is extended, a principal fulcrum means extending through the hip part of said device and a standard to support said fulcrum, and with it said device in operative position.



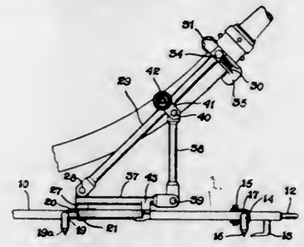
2,449,716
AUTOMATIC FIREGUARD FOR MOTION-PICTURE PROJECTORS
Jules Francis Reney, Victoria, British Columbia, Canada
Application September 27, 1946, Serial No. 699,854
1 Claim. (Cl. 88—17)

The combination with the housing of a film feeding mechanism of a motion picture projecting machine, of guide frames mounted on the top and bottom walls of the housing in covering



relation to the openings through which the film passes, said frames having transverse slots in register with said openings for passage of the film and inturned longitudinal edges forming guide flanges, shutters slidably mounted in the guide flanges of said frames having a cutting edge for severing the film when moved across the slots of the frames, brackets attached to said frames and said shutters in longitudinal alinement, rods fixedly attached to the brackets of said shutters and slidably mounted in the brackets of said frames, compression springs mounted on said rods between said brackets adapted to move said shutters to sever the film and close the openings, a flexible wire having its ends connected to the brackets of said shutters adapted to hold said springs under compression and said shutters retracted, means for guiding said wire parallel to the film and adjacent thereto, and a fusible link interposed in said wire adjacent the film at the point of exposure.

2,449,717
HYDRAULIC CLUTCH
Charles A. Robertson, San Francisco, Calif.
Application March 10, 1945, Serial No. 581,999
4 Claims. (Cl. 192—85)



1. A clutch of the character described comprising a fluid pressure pump in a fluid pressure circuit for pumping fluid under pressure through said circuit upon actuation of said pump, a cylinder having a piston reciprocable therein, a pair of fluid pressure conduits, one end of each of said conduits communicating with one end of said cylinder, a control valve in said circuit with which the opposite ends of said conduits communicate arranged and adapted to admit fluid under pressure from said circuit into one or the other ends of said cylinder for causing movement of said piston in one direction or the other as desired, a rotary drive member carrying a friction element movable in opposite directions, means connecting said element with said piston for causing movement of said element in one direction or the other according to the direction of movement of said piston, means securing said pump, cylinder, conduits, circuit and valve to said drive member for rotation therewith, a driven member coaxial with said drive member positioned for frictional engagement with said element upon said movement of the latter in one direction, and means connected with said valve for actuating the same from a point remote from said drive and driven members, and means carried by said driven member for actuating said pump upon relative rotation between said driven and said driving members.

2,449,718
SNATCH BLOCK
Charles H. Bue, Fargo, N. Dak.
Application October 29, 1945, Serial No. 625,222
2 Claims. (Cl. 254—194)

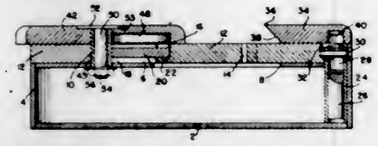
1. A snatch block for stringing wires comprising a frame, a wire supporting sheave rotatably mounted in said frame, a bail of substantially inverted U-shape having vertical side limbs connected by a transverse limb, one of the vertical limbs being longer than the other vertical limb, means pivotally connecting the longer limb to the frame, the shorter vertical limb being spaced from the frame to provide an open side to permit a wire to engage said sheave, and a link pivoted on the short vertical limb of the bail below the transverse limb and engageable with said frame to close the open side of the bail, said bail having a substantially T-shaped slot, said slot being formed with a wide section in the short vertical limb and a narrow section in the transverse limb for detachably connecting an insulator hanger button to the snatch block to support the same, the parts being constructed and arranged so that the snatch block can be detachably connected to the hanger button without interfering with the connection of the link with the bail.

2,449,719
NOZZLE HOLDER
Edward C. Rumsey, deceased, late of Detroit, Mich., by Lillian Gray Rumsey, executrix, Detroit, Mich., assignor to Lillian Gray Rumsey
Application October 17, 1946, Serial No. 703,902
5 Claims. (Cl. 248—80)

1. Nozzle holder construction including a longitudinal center bar, a spike on the rear end of said center bar, a pair of arms hinged to said center bar adjacent its front end for folding alongside the bar and extending at right angles thereto, a hose supporting leg pivotally connected at its rear end to an intermediate portion of said center bar for swinging upward therefrom,

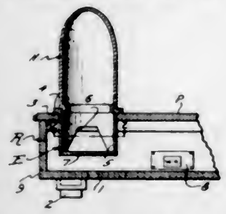
jaw means on the front end of said leg for holding a hose, means detachably connecting said jaw means to the front end of said center bar, and means mounted on said center bar for holding said leg in upwardly adjusted position.

2,449,720
SAND PUMP
James J. Santiago, Los Angeles, Calif., assignor, by mesne assignments, to Grant Oil Tool Company, Los Angeles, Calif., a corporation of California
Application June 15, 1945, Serial No. 599,549
1 Claim. (Cl. 166—19)



A well sand pump comprising a barrel adapted to be thrust down into the sand, a plunger in the barrel and including a sand-receiving chamber vertically reciprocable into and out of the sand, means for retaining accumulated sand in said chamber, said plunger having an upper portion extending out of the barrel, a coil spring about said upper portion of the plunger, and means normally confining the upper end of said spring to cause the spring to resist downward movement of the plunger relative to the barrel, the last mentioned means being releasable to relieve said resistance of the spring.

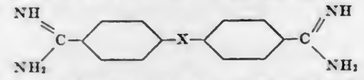
2,449,721
BAILER UNLOADING RACK
James J. Santiago, Los Angeles, Calif., assignor to Grant Oil Tool Company, Los Angeles, Calif., a corporation of California
Application September 4, 1945, Serial No. 614,155
3 Claims. (Cl. 166—19)



1. Apparatus for use in dumping a fluid charge from a well bailer having parts relatively rotatable to dump the charge, a floor-supported standard, a vertically inclined continuously open side cradle carried by said standard and adapted to receive and support the bailer in inclined position, and means forming within the cradle an open end recess adapted to receive and hold one of said bailer parts against movement relative to the other part, said means also presenting upwardly facing shoulders upon which the bailer is rested.

2,449,722
BANK OR JEWELRY BOX
Clinton W. Saathoff, San Antonio, Tex.
Application November 15, 1946, Serial No. 710,052
2 Claims. (Cl. 232—4)

1. A bank having a top formed with a large opening, a lid for the opening having a circular counterbore forming an arcuate shoulder and a longitudinal slot communicating with the bore, said lid having a slot by which coins and the like can be dropped into the bank and means in the longitudinal slot pivotally securing the lid to the bank, a circular weight in the bore, a cover for the lid formed with a lower eccentric circular cavity and pivotally mounted on said latter means, said eccentric cavity being angularly disposed from the bore when the cover and lid are longitudinally aligned with one another, whereby rotation of the cover from its normally aligned position along the lid will align the cavity with the weight and inversion of the bank will cause the weight to fall into the cavity and retrograde movement of the cover will retain the weight in the cavity when the bank is returned to upright position, and means in the bank engageable with the lid for preventing sliding movement of the lid when the bank is inverted and until the bank is returned to upright position.

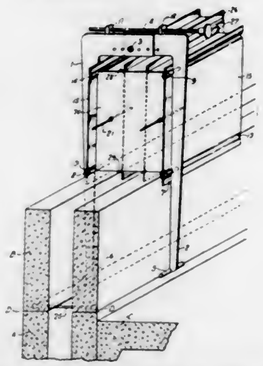


2,449,723
BOTTLE WARMING DEVICE
Louis Schworm, Jr., Washington, D. C.
Application August 30, 1945, Serial No. 613,598
3 Claims. (Cl. 219—38)

1. A bottle warming device of the character stated comprising a receptacle, means for heating liquid therein, a cover for said receptacle, said cover having an opening therein, a cup-like container insertable through said opening to extend into the receptacle, said container having a wall opening to admit liquid and steam from the receptacle into the container, the container having an encircling top flange, said flange and container being formed for the establishment of a relatively tight engagement between their opposing surfaces, the container being designed to receive a bottle, and a relatively long cover adapted to enclose said bottle and having tight detachable connection with the container.

2,449,724
MANUFACTURE OF AMIDINES
Wallace Frank Short and Maurice William Partridge, Nottingham, England
No Drawing. Application March 8, 1948, Serial No. 13,744. In Great Britain July 11, 1945
3 Claims. (Cl. 260—564)

1. A process for the preparation of a thiocyanate salt of an amidine of the formula



which comprises heating a dinitrile of the formula

with ammonium thiocyanate to a temperature of the order of 180–240° C., X being a member of the group consisting of —O— and —O(CH₂)₃O—.

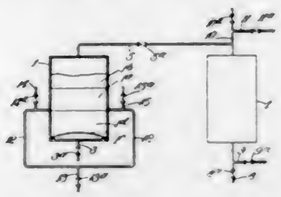
2,449,725
FORM FOR MOLDING CONCRETE WALLS
Frazeur S. Slater, Chicago, Ill.
Application April 26, 1945, Serial No. 590,336
7 Claims. (Cl. 25—131)

5. A mold adapted for use in the construction of a plastic wall comprising a plurality of sections in the form of a tier with the junctions between adjacent sections at the outer face of the tier being substantially parallel straight grooves, said mold comprising a pair of plates each having a rib on its inner face extending parallel and adjacent to the lower edge of the plate to provide an overlap portion between the rib and the said edge of the plate, each plate also having a rib on its inner face extending parallel to the aforementioned rib and spaced above the aforementioned rib a distance equal to the distance between the grooves in said tier, said ribs serving to form the said junction groove between adjacent sections, a clamp in the form of an inverted U straddling the outer sides of said plates for retaining said plates in parallel spaced relation to receive a plastic therebetween and to define the section being formed, the legs of said U clamp extending beyond the lower overlap edge of each of said plates, and upper, lower and intermediate registering means carried by each of said legs and spaced vertically from each other a distance substantially equal to the distance between said junction grooves in said tier, said upper and intermediate registering means interengaging the plates in said ribs and said lower registering means being adapted to engage the two previously formed sections in their junction grooves whereby each mold plate may be accurately positioned with respect to the second previously formed section regardless of the extent the last formed section has settled whereby upon pouring the plastic between said plates the overlapping portion and rib of each of each of said plates is adapted to cooperate with the plastic to complete and perfect the last previously formed section in case of shrinkage.

2,449,726
DIRECT COATING OF SILVER ON IRON OR STEEL
Alfred Daniel Slatkin, Toronto, Ontario, Canada, assignor to Arthur F. Cutten
No Drawing. Application July 12, 1945, Serial No. 604,725
2 Claims. (Cl. 204—46)

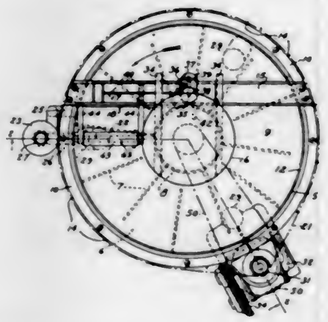
1. The process of applying directly to a ferrous metal cathode a coating of silver comprising; placing said ferrous metal cathode in an aqueous bath having sodium cyanide 8 to 15 ounces, silver cyanide ¼ to 2 ounces, sodium chloride ¼ to 2 ounces, potassium carbonate ⅛ to 1 ounce, to a gallon of water; placing an iron anode in said bath and passing an electrical current of a value between 30 to 200 amperes per square foot of surface area of the cathode, between said anode and cathode.

2,449,727
CASING FOR REMOVABLY ENCLOSING IDENTIFYING TAGS
Doris K. Sloane, New Bedford, Mass.
Application November 25, 1943, Serial No. 511,724
4 Claims. (Cl. 40—10)



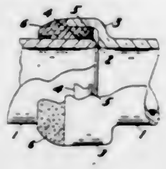
1. A device for removably enclosing thin rigid identifying tags having a hole centrally of and adjacent one end thereof comprising a casing having complementary front and rear walls of thin soft flexible material of suitable contour closely to surround the tag, means permanently uniting the marginal edge portions of the sides and lower ends of said complementary walls but leaving at the upper end an open mouth to permit the introduction and removal of the tag, alined apertures in the complementary walls centrally of and adjacent the mouth thereof, an endless flexible suspension member of sufficient length to encircle the neck of the wearer extending through said alined apertures and the hole in the tag therebetween operable when thus assembled and the casing and tag supported by the flexible suspension member to close and retain said mouth closed but to permit opening of the mouth and withdrawal of the tag therethrough by slackening the suspension member without detaching the suspension member from the casing or from the tag.

2,449,728
ARTIFICIAL HAND AND ARM
Hans J. Snethun, Vancouver, British Columbia, Canada
Application January 24, 1946, Serial No. 643,021
4 Claims. (Cl. 3—12)



1. An artificial hand and arm comprising upper and lower arm portions having side bars pivoted to each other to form by an elbow joint the side bars of the upper arm portion being formed with slots eccentric to the pivots of the elbow joints, a hand at the front end of the lower arm portion having fingers movable to opened and closed positions, and actuating rods slidable longitudinally of the side bars of the lower arm portion and having front ends connected with the fingers and their rear ends engaged in the slots formed in the side bars of the upper arm portion whereby the actuating rods will be shifted longitudinally along the lower arm portion and cause movement of the fingers to a closed position when the lower arm portion is swung about the elbow joint to a raised position.

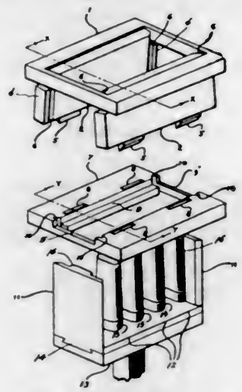
2,449,729
PROCESS FOR THE PRODUCTION OF INDUSTRIAL OR POWER GASES
Michael Steinschlaeger, London, England
Application December 29, 1944, Serial No. 570,482
In Great Britain September 24, 1942
6 Claims. (Cl. 48—197)



6. A process for the production of industrial and power gases in which a bed of solid fuel or a mixture of solid fuel with oil is subjected to alternate blowing and gas making periods in a generator provided with a grate, which comprises subjecting the fuel in the generator to blowing, withdrawing blowing gases from the generator, mixing the said withdrawn gases with another fuel and with an oxidizing gas, passing the mixture thus obtained through a regenerator to heat the same, thereafter passing steam through said regenerator to produce superheated steam, mixing said superheated steam with oil, the said superheated steam being at a sufficiently high temperature and possessing sufficient sensible heat to crack the oil, passing steam through the generator in a downward direction to make gas, withdrawing the made gas from the generator between the lower boundary of the reaction zone and the grate, and mixing said made gas with oil to carburet the same, the carburetting of the made gas being effected solely by the sensible heat of the made gas and the undecomposed steam.

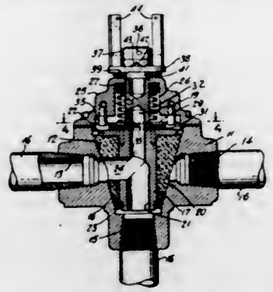
2,449,730
SLUSH ICE MAKING MACHINE
William H. Taylor, Waukesha County, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 20, 1944, Serial No. 564,241
17 Claims. (Cl. 62—106)

1. In combination, a casing having a flat annular freezing surface, means for constantly maintaining said surface at freezing temperature, means for constantly feeding liquid upon and throughout the area of said surface, and a constantly revolving scraper for planing the congealed liquid from the surface and for conveying the removed product toward the center of the annulus.



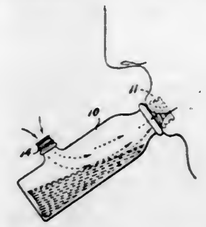
2,449,731
GROWTH POISONING SEWER JOINT
Robert F. Therrien, Toledo, Ohio
Application March 29, 1946, Serial No. 658,365
2 Claims. (Cl. 285—115)

1. A duct drain section bell end providing an opening, a complementary drain section having an end thereof in the bell, an endless copper ring having a cylindrical sleeve portion extending from a radial flange, said ring in its endless extent having snug bearing with one of the sections at the sleeve portion and snug bearing contact with the other section at said flange thereby to form a tight seal between the sections, and a sealing cement of greater radial thickness than the ring flange, said cement extending into the bell covering the ring and providing ring-concealing reinforcement.



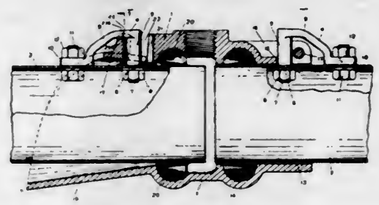
2,449,732
MOLD FOR FORMING CEMENTITIOUS BLOCKS
Clayton B. Voege, Indianapolis, Ind.
Application January 11, 1946, Serial No. 640,529
3 Claims. (Cl. 25—121)

1. A mold comprising a top table, a carrying head, a bed plate carried by the head, opposed walls for the mold cavity carried by the head, opposed walls for the mold cavity carried by the



table, and means for maintaining the walls of the mold in assembled relation.

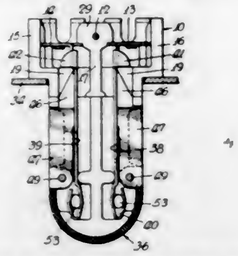
2,449,733
VALVE ACTUATING MECHANISM
Herbert C. Wilkening, Dayton, Ohio, assignor to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio
Application April 22, 1944, Serial No. 532,223
2 Claims. (Cl. 251—97)



1. In a fluid distributing mechanism having a body and a valve in said body movable in rotary and axial directions, said valve having an operating shaft extending from said body and through which shaft motion is imparted to said valve; actuating mechanism for said shaft including an angular head fixed to said shaft outside body; an actuator ring surrounding said shaft adjacent said head; spring means urging said actuator ring and said head into contacting relation; projecting lugs on said actuator ring arranged alongside said head and operative during rotary movement of said actuator ring to engage and turn said head and said shaft, said lugs occupying initially a position spaced from said head whereby a lost motion period intervenes between the start of rotary motion of said actuator ring and the time of engagement of said lugs with said head; and complementary cam means carried by said actuator ring and said head for effecting axial motion of said head and said valve operating shaft during said lost motion period, said means including rolling members carried by said ring, and grooves in said head receiving said rolling members.

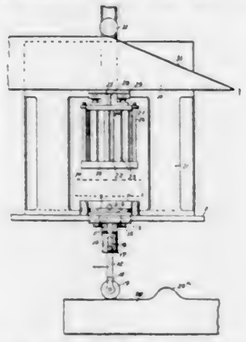
2,449,734
MEDICINAL ATOMIZER
Oscar Otto Wunsch, Gulfport, Miss.
Application June 9, 1947, Serial No. 753,485
1 Claim. (Cl. 128—173)

A liquid medicament container and inhalator consisting of a bottle having a reduced neck at the top thereof adapted to be inserted into the mouth of a patient, said neck having an opening leading to the interior of the bottle, a removable closure closing and sealing said opening, a nipple located in the side of the bottle near the bottom thereof and having an opening leading to the interior of the bottle, and a removable closure adapted to close and seal the nipple opening; both of said openings being of substantial dimensions and being clear of all obstructions so that there may be a free flow of air therethrough; the interior of said bottle being entirely free of all obstructions including tubes so that the bottle will contain nothing except the liquid medicament and air; the inhalator being adapted to be partly filled with liquid medicament and tilted and held with the upper end open and inserted in the mouth of the patient and the nipple opening exposed to the atmosphere, so that the patient by mouth suction may draw air in through the nipple opening and over the considerable surface of liquid caused by tilting of the bottle, whereby vapor will be picked up from said liquid medicament before the air flows into the patient's oral and nasal cavities.



2,449,735
IRRIGATION PIPE COUPLING
Chris Wyss, Tillamook, Oreg.
Application April 16, 1946, Serial No. 662,443
4 Claims. (Cl. 285—175)

1. A pipe coupling comprising in combination, a coupling member, a pipe end to be coupled therewith and having an outstanding pin secured adjacent its end, said coupling member being formed to receive a pipe end and having a slot for receiving the outstanding pin on the pipe end and including a locking member extending across said slot for retaining the pipe pin in said slot, said pipe pin including a brace portion extending angularly therefrom and being secured to said pipe in spaced relation from the pin proper to brace the pin relative to the pipe wall



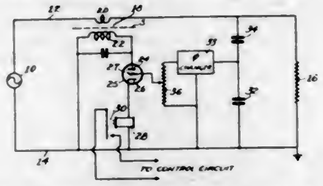
and prevent deformation of said pipe wall, said brace portion being positioned to overlie said locking member to secure said pin in said slot against accidental displacement therefrom.

2,449,736
ELECTRICAL CONNECTION OF SEPARABLE CHARACTER
Samuel Bogen, New York, N. Y.
Application August 23, 1946, Serial No. 692,455
2 Claims. (Cl. 173—328)

1. In a separable electrical connection, a prong member provided with parallel projecting contact prongs, a socket member provided with openings adapted to receive said prongs and with interior contacts engageable by said prongs, each of said prongs comprising a metallic strip whose forward end is provided at its opposite edges with parallel latching wings arranged at substantially right angles to the plane of said strip, means for mounting said prongs so that they will deflect as spring latches, said openings in the socket member being provided with oblique walls for camming said prongs into deflected positions as they are inserted, latch-engaging shoulders at the inner ends of said oblique walls and adapted to be engaged by the rear edges of said latching wings when the prong member is inserted to its full extent, and wedge-shaped projections on the prong member adapted to fit within said openings and bear against said oblique walls when the prong member is in its fully inserted position.

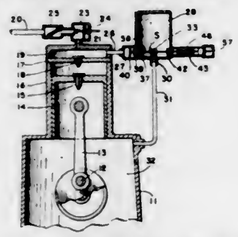
2,449,737
SLICING, CUTTING, AND CORE-REMOVING MACHINE
Edward W. Bridge, Philadelphia, Pa.
Application October 8, 1946, Serial No. 701,967
3 Claims. (Cl. 146—42)

1. In a fruit slicing and coring machine wherein is provided a turntable on which the operating units are mounted, the improvement which comprises a dump plate hinged to the turntable at its periphery and normally resting on the top of the table, a die plate mounted on said dump plate, a shield around the dump plate and open at the hinge side of the same for discharge of cuttings on said die plate, and cam operated means separate from the dump plate hinge but engaging the plate for raising said dump plate to dump the cuttings over the periphery of the turntable.



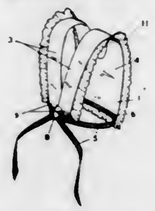
2,449,738
OIL EMULSION TREATER
George E. Dake, Parkersburg, W. Va., and Joe A. Lyne, Houston, Tex., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a corporation of West Virginia
Application April 14, 1944, Serial No. 531,106
18 Claims. (Cl. 210—52.5)

1. In an oil and water separator, a pair of substantially vertical casing units one within the other and spaced to form therebetween a vertically elongated fluid path, the inner casing unit having an open lower end communicating with the lower end of said fluid path for the flow of fluid therefrom into said inner casing unit, means for introducing a mixture of oil and water into said path at a point spaced a substantial distance above the lower end thereof, heating means within the lower portion of said inner casing unit, baffle means arranged in the inner casing unit above said heating means, an oil outlet communicating with the inner casing unit at a point spaced above the bottom thereof, and a water outlet communicating with said outer casing unit adjacent the bottom thereof.



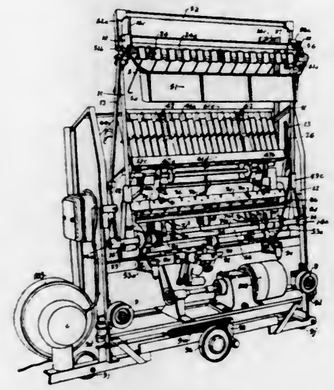
2,449,739
APPARATUS FOR DETECTING VARIATIONS IN LOAD IMPEDANCES
William S. Duttera, Lynbrook, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application May 19, 1945, Serial No. 594,761
3 Claims. (Cl. 177—311)

1. In a circuit including a source of high frequency energy and a load, means for deriving a potential proportional to the current drawn by said load, means for deriving a potential proportional to the voltage across said load, means for applying one of said potentials to the anode-cathode circuit of a thermionic discharge tube, means for applying the other of said potentials to a control electrode of said thermionic discharge tube, means for so adjusting the amplitude and phase of one of said potentials with respect to the other that under normal conditions a minimum current flows in the anode-cathode circuit of said



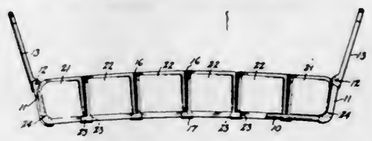
thermionic discharge tube, and means responsive to an increased flow of current in said anode-cathode circuit for controlling an alarm circuit.

2,449,740
PRESSURE UNLOADER FOR COMPRESSORS
Joseph Felser, Jr., Guam, Marianas Islands
Application August 14, 1947, Serial No. 768,695
7 Claims. (Cl. 230—21)



1. For use with a motor-driven gas condensing compressor having a suction side and a discharge side, a pressure unloading device characterized by a pressure receiving casing, a first conduit between the casing and the discharge side of the compressor, a second conduit between the casing and the suction side of the compressor, a valve controlling the first conduit, a valve controlling the second conduit, said valves being unitarily associated with a valve operating rod and so correlated than when one valve is open the other is closed, and spring means for moving the rod and its valves against pressure in the first conduit only when pressure in that conduit is less than the power of the spring means.

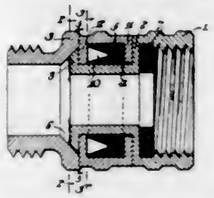
2,449,741
BABY HARNESS FOR CHAIRS
Genevieve M. Fitzpatrick, Portland, Oreg.
Application August 5, 1947, Serial No. 766,171
2 Claims. (Cl. 2—49)



1. A baby harness for securing a child in a chair or the like, comprising an elongated sheet that is bifurcated from one end through a major portion of its length to form a full width portion at one end with the bifurcations forming straps extending therefrom, the full-width portion being of a width to cover the chest of the child for service as a bib and the straps being of a length to extend over the shoulders and down the back of the child, a ring member uniting the free ends of the straps, a tie member secured to and across the bib-forming full width portion, and being of a length to extend around the body of the child, through said ring member and about the back of a chair.

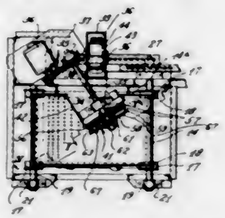
2,449,742
METHOD AND APPARATUS FOR DOFFING SPINNING FRAMES AND THE LIKE
George Alfred Rea Foster and James Gregory, Didsbury, Manchester, England, assignors to The British Cotton Industry Research Association, Didsbury, Manchester, England, a British association
Application November 27, 1945, Serial No. 631,114
In Great Britain November 30, 1944
15 Claims. (Cl. 57—53)

5. In a doffing apparatus for ring spinning, doubling and twisting frames, means for engaging and raising the full bobbin with the result that some of the yarn thereon unwinds over the lower end of the bobbin on to the spindle, means for catching or picking up the yarn below the bobbin as it so unwinds, and thereby limiting the amount of yarn which winds onto the spindle so that this yarn is readily pulled away with the full bobbin at the succeeding doffing, means for gripping and severing picked up portion of the yarn in such a way as to hold the end leading to the spindle and thence to the traveller and release the end leading to the bobbin.



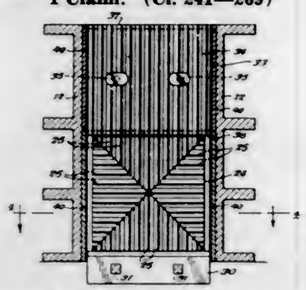
2,449,743
GRID FOR ICE TRAYS
Robert Lay Hallock, Larchmont, N. Y.
Application April 2, 1936, Serial No. 72,250
23 Claims. (Cl. 62—108.5)

6. A grid including a longitudinal member adapted to be bowed, a lever handle pivotally associated with said member and adapted first



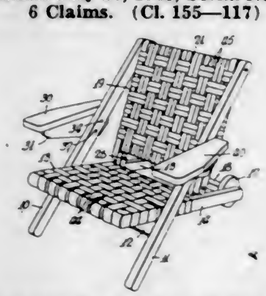
for releasing the grid from a tray and then for bowing said member, said lever handle being movable through a given arc, and a part attached to and movable in correspondence with the lever handle having a first abutment engageable with a tray at a given point in the lever arc for release of the grid from the tray and a second abutment engageable with another part of the grid at a further given point in the arc of travel of the lever handle to cause the grid to be bowed.

2,449,744
SWIVEL COUPLING
Pierre M. Hardwick, Los Angeles, Calif.
Application May 14, 1946, Serial No. 669,487
2 Claims. (Cl. 285—97.9)



1. In a swivel coupling, in combination, a tubular coupling element threaded at one end thereof and provided at its opposite end with a pair of longitudinally spaced inwardly projecting radial flanges forming an inwardly presenting gasket-receiving channel within said element, a second tubular coupling element telescoped within said first coupling element, said coupling members being adapted for relative rotation about the longitudinal axis of the coupling, means for securing said couplings against relative axial displacement including a pair of annular flanges and a longitudinally extending sleeve portion therebetween formed integrally on said second coupling element to provide an outwardly presenting channel within which said gasket-receiving channel is nested, and an expansible gasket disposed within the space formed between said nested channels.

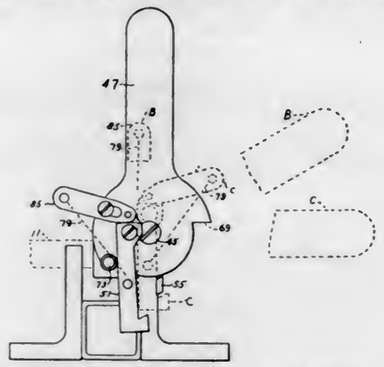
2,449,745
SHOT BLASTING MACHINE
Walter E. Jewell, Los Angeles, Calif.
Application April 1, 1947, Serial No. 738,516
4 Claims. (Cl. 51—13)



1. A shot blasting machine comprising a rotatable tumbling drum having a generally horizontal axis, a generally horizontal rotatable shaft projecting into the drum at one end thereof and at an acute angle to the drum axis, and a narrow shot-throwing wheel disposed on the shaft inside of the drum so that a shot pattern may be thrown diagonally across the drum to cover the entire axial length of the drum.

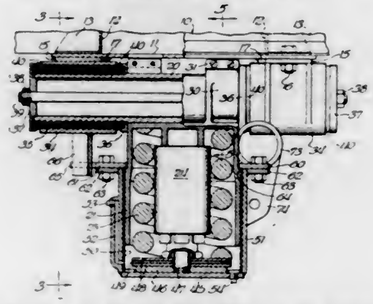
2,449,746
WEAR PLATE FOR JAW CRUSHERS
Revere P. Kinkel, South Porcupine, Ontario, Canada, assignor to Buffalo Ankerite Gold Mines, Ltd., South Porcupine, Ontario, Canada
Application May 6, 1944, Serial No. 534,401
1 Claim. (Cl. 241—269)

In a crusher having a stationary jaw and a movable jaw which is movable toward and from said stationary jaw, the combination of a wear plate of hard material for one of said jaws, said wear plate being of the width of said jaw and of a height equal to said width, said wear plate having its material engaging face divided by diagonals into four areas and having corrugations in each of said areas extending substantially perpendicular to the adjacent edge of said plate, to approximately said diagonals.



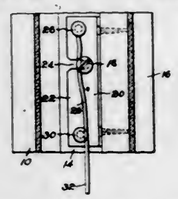
2,449,747
LOUNGE CHAIR
Ferdinand Kramer, Port Chester, N. Y.
Application July 27, 1945, Serial No. 607,284
6 Claims. (Cl. 155—117)

2. In a lounge chair of the character described, a bracing frame slanting rearwardly upwards and provided with a seat support, the lower end of said frame defining a front support for the chair, a seat frame slanting forwardly upwards and intersecting said bracing frame at the level of said seat support, the lower end of said seat frame defining a rear support for the chair, a back frame pivoted at its upper edge to the upper end of said bracing frame and at its lower edge to a midportion of the seat frame rearwardly of said intersection, and means for releasably securing the seat frame, at selected different regions thereof, to said seat support.



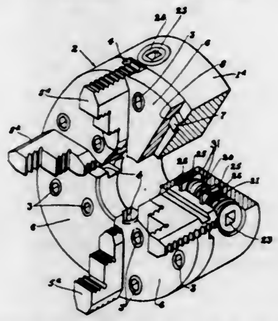
2,449,748
SNAP-ACTION LATCH FOR WORK HOLDING VISE
Homer G. Luft, Dearborn, Mich.
Application September 11, 1944, Serial No. 553,647
2 Claims. (Cl. 81—25)

1. Snap action holding means comprising, a stationary structure, a member movably secured to said structure, a latch control disc having a central aperture, a pivot passing into said member through said aperture in the control disc for pivotally securing said disc on a portion of said member which is movable toward or away from said structure, a second pivot secured in and extending from said disc in a relation axially spaced from and parallel to the first mentioned pivot, a latch having an apertured end pivotally mounted on said second pivot on said disc, the free end of said latch having a hook projection extending therefrom in the plane of rotation of the latch, a projection extending from said stationary structure to be engaged by said latch and its hook



projection when the member is adjacent the structure, a spring secured at one end to an intermediate portion of said latch, a lever, means pivotally securing one end of said lever to the pivoted end of the latch, means securing the other end of said spring to the free end of said lever, slidable connection means between said disc and said lever for turning the lever relatively to the latch to draw the spring to one side or the other and to snap the latch to one side or the other as the disc and the latch are relatively rotated, and a stop for engaging the latch on the side opposite from the side which engages said stationary projection for holding the latch and limiting its movement relative to the disc as the latter is rotated on its pivot.

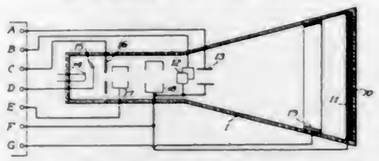
2,449,749
FIFTH WHEEL ASSEMBLY
Robert W. Pointer, Portland, Oreg.
Application November 28, 1945, Serial No. 631,290
20 Claims. (Cl. 280—110)



1. In a vehicle front axle fifth wheel construction, a longitudinal trunnion supporting a vehicle frame for tilting movements relative to said axle, and pivotal means for mounting said trunnion for relative rotation in said axle comprising a vertical cylinder in said axle, a barrel in said cylinder carrying said trunnion, and resilient means bearing in the bottom of said cylinder supporting said barrel for vertical and rotative movement relative to said cylinder.

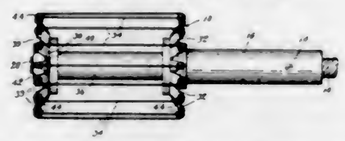
2,449,750
FASTENER FOR STORM WINDOWS AND THE LIKE
Rollen Redmond, Arlington, Mass.
Application September 28, 1946, Serial No. 700,089
2 Claims. (Cl. 292—303)

1. A fastener for storm sash or the like comprising a base having provision for securing it to the face of the sash and including a plate projecting therefrom to lie along the inner edge of the window casing, the plate having an open-sided notch to receive a pin projecting from the casing, a yieldable arm pivoted at one end of the plate to swing transversely to the casing and means on the plate for releasably engaging the arm adjacent its other end with its middle portion across the notch to engage such a pin received in the same.



2,449,751
LATHE CHUCK
George V. Rogers, Waterford, Conn.
Application February 5, 1946, Serial No. 645,617
2 Claims. (Cl. 279—112)

1. A lathe chuck comprising a body section having a plurality of radial recesses, a front plate section detachably secured to the body section and provided with radial jaw-receiving slots, one for each recess, which slots extend through the front plate section from the front face thereof to the back face, thereby dividing said front plate section into identical sectors, a chuck jaw slideably mounted in each slot, a jaw-actuating screw in each radial recess, the threads of each screw engaging teeth in the corresponding jaw, and each screw having a necked-out portion, and the recess for each screw having a peripheral groove regis-



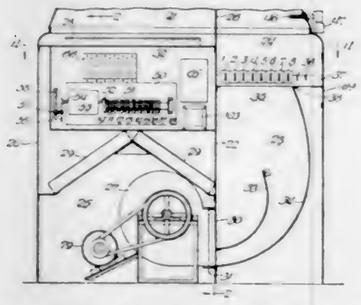
tering with said necked-out portion, a two-part thrust bearing encircling the necked-out portion of each screw, and comprising a front section and a back section, the peripheral portion of said thrust bearing being retained in said groove, the sectors of the front plate section bearing against the front section of each thrust bearing and clamping the two thrust bearing sections together and retaining them in said groove.

2,449,752
CATHODE-RAY TUBE
Thomas N. Ross, near Seattle, Wash.
Original application January 7, 1946, Serial No. 639,616. Divided and this application June 20, 1947, Serial No. 755,939
13 Claims. (Cl. 250—164)

1. A cathode ray tube having associated therewith a screen structure of a nature susceptible of permanent alteration in its sensitivity to electron bombardment by initial bombardment.

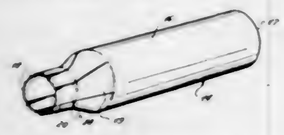
2,449,753
FISH SCALING DEVICE
John F. Sawyer, Millis, Mass.
Application February 24, 1944, Serial No. 523,698
6 Claims. (Cl. 17—5)

1. In a fish scaling device, a rotatable head comprising an axially extending element having means at one end for securing it to a power shaft to rotate therewith, a plurality of end members spaced apart on said axial element and having resilient portions extending radially outward from said axial element, means securing said end members in their spaced relation and against rotation on said axial element, a series of wires extending from one to another of said end members in general parallelism with the axis of rotation of the head and in spaced relation around said axis, and means removably securing end portions of the individual wires to said resilient portions of said end members.



2,449,754
FITTING FOR CONNECTING PIPES BY WELDING
Oskar Seitz, Baden, Switzerland
Application August 25, 1945, Serial No. 612,587
In Switzerland December 20, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 20, 1963
7 Claims. (Cl. 285—111)

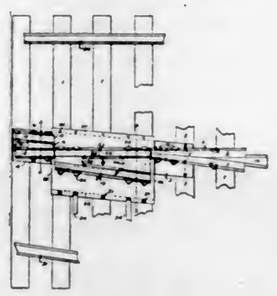
1. A universal pipe fitting for connection by welding between pipe ends of the same or different diameters including a unitary connecting member having at least one integral extension nipple of substantially tapering form comprising demarked integral severable sections each having a diameter at the point of demarcation corresponding to a standard pipe size whereby upon the severance of any selected one of which an end



surface will be provided on the remaining unsevered part of the nipple of a diameter appropriate for connection by welding to a pipe end of corresponding diameter.

2,449,755
ELECTRIC HEATING AND VENTILATING UNIT
Riley H. Taylor, Portland, Oreg.
Application November 20, 1945, Serial No. 629,852
20 Claims. (Cl. 219—39)

1. An electric furnace comprising a cabinet containing a plenum chamber and an air return chamber in side by side relation therewithin, a blower in said air return chamber for blowing air from said air return chamber through said plenum chamber, a bank of heating units disposed in closely spaced relation across the cross section of said plenum chamber, a single air outlet in said plenum chamber, a filter in said air return chamber, an air inlet for said return chamber having a single source of air supply, and a damper in said inlet to control the rate of air flow produced by said blower.

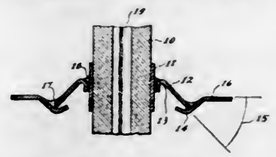


2,449,756
TAIL PIPE EXTENSION
Herbert L. Trautmann, Los Angeles, Calif., assignor to Cal-Pan Corporation, Alhambra, Calif., a corporation of California
Application February 18, 1947, Serial No. 729,371
1 Claim. (Cl. 285—183)

A tail pipe extension comprising a generally tubular body member that is open at one end, and a plurality of overlapping axially parallel strips

formed on the other end of the tubular member and reduced in diameter with respect to the tubular member to form an adjustable tail pipe connection.

2,449,757
TRANSVERSELY SLIDING RAILWAY FROG
Anthony L. Vissat, Pittsburgh, Pa.
Application November 27, 1944, Serial No. 565,253
1 Claim. (Cl. 246—392)

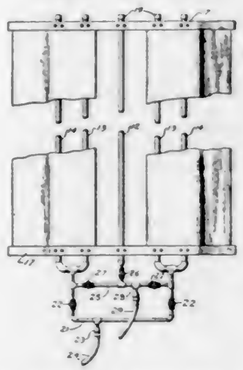


A railway frog construction of the class described comprising the combination of a fixed flat rolled steel base plate provided with lubricating channels on the top face thereof, a pair of flat rolled steel end plates fixed on respective end portions of said base plate, a flat rolled steel frog plate mounted on said base plate between said pair of end plates and being of a width considerably greater than the width of said base plate, the top surface of said frog plate being disposed on the plane of the top surfaces of said end plates, a lubricating element carried by said frog plate operable for supplying lubrication to said channels, a pair of converging pointed rolled steel rail members having a pointed end portion fixed on one of said pair of end plates, the terminal of said pointed end portion overlapping and seating on the adjacent end portion of said frog plate, a pair of converging spaced rolled steel rail members having the end portions thereof fixed on the other of said pair of end plates, the terminals of said spaced end portions overlapping and seating on the adjacent end portion of said frog plate, a pair of rolled steel rail sections fixedly assembled on said frog plate in spaced relation to each other and having the ends thereof spaced from respective ends of said frog plate, a pair of filler blocks disposed between and secured to respective end portions of said rail sections for reenforcing and maintaining the spaced relation of the latter, said frog plate being laterally adjustable in one direction on said base plate to position one of said pair of rail sections in alignment with the terminal of said pointed rail members and with the terminal of one of said pair of spaced rail members, said frog plate being laterally adjustable in the other direction on said base plate to position the other of said pair of rail sections in alignment with the terminal of said pointed rail members and with the terminal of the other of said pair of spaced rail members, and a stop bar fixed at each bottom side edge portion of said frog plate and extending throughout the length of the latter for engaging respective side edges of said base plate to limit the lateral adjustment movements of said frog plate on said base plate to distances providing the exact alignments of said rail sections with the terminal of said pointed rail members and with respective terminals of said pair of spaced rail members.

2,449,758
BED EQUIPMENT
Elsa Helena Clementine Wikmark, Stockholm, Sweden
Application August 14, 1944, Serial No. 549,436
In Sweden February 5, 1942
4 Claims. (Cl. 5—334)

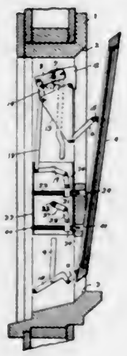
1. Bed equipment comprising a casing consisting of a top portion and a bottom portion, each having two opposite parallel edges, means detachably securing each of the two parallel edges of the top portion to a corresponding parallel edge of the bottom portion, a top quilt and a bottom quilt, each having opposite parallel edges arranged parallel to said parallel edges of the top and bottom portions of the casing, each quilt being attached to a corresponding portion of the casing along lines parallel to but located at a distance from said parallel edges, and top and bottom sheets each having opposite parallel edges arranged parallel to the parallel edges of the quilts, each of said sheets covering the inner surface of the corresponding quilt and each being of greater width between its parallel edges than the dimension between the parallel edges of the corresponding quilt, the edge portion of each sheet adjacent each of said parallel edges thereof being folded between the edge portion of the corresponding quilt adjacent said parallel edge thereof and the corresponding casing portion.

2,449,759
ELECTRICAL SEAL
Harry O. Barschdorf, Adams, Mass., assignor to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts
Application May 5, 1944, Serial No. 534,192
10 Claims. (Cl. 189—36.5)



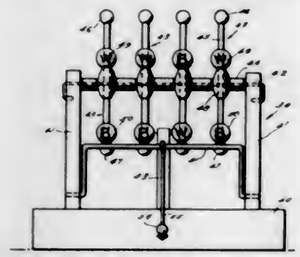
1. A ceramic cylinder having a metallic layer circumferentially bonded to the surface thereof, said metallic layer being bonded to and circumferentially enclosed by a strain-absorbing flange comprising a conical frustum, one end of which provides a circular band adjacent the cylinder and the opposite end of which is bonded to a metal surface.

2,449,760
APPARATUS FOR RELIEVING STRESS IN WELDED PLATES
Clay P. Bedford, Berkeley, Calif., assignor to The Kaiser Company, Oakland, Calif., a corporation of Nevada
Application September 14, 1944, Serial No. 554,131
1 Claim. (Cl. 266—2)



Apparatus for relieving residual stresses in metal plates joined by a weld comprising, a plurality of inverted channel-shaped frame members adapted to be supported on said plates, a pair of substantially parallel heat retaining

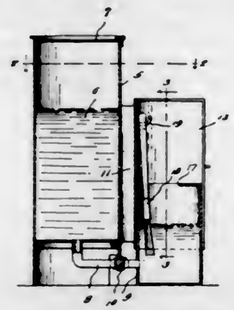
hoods secured to and spaced apart by said frame members so as to provide an open space therebetween, each of said hoods including a vertically disposed inner baffle portion and an angularly disposed outer baffle portion, fluid discharge means supported within said open space by said frame members extending along a substantial length of said weld in such a manner as to deliver a cooling fluid to said weld and to a tension zone immediately adjacent to said weld and lying on both sides thereof, a plurality of longitudinally aligned burners supported by said frame members within



each of said hoods and extending substantially the length of said weld, each of said burners having a plurality of fluid discharge jets, the jets in the burner close to the vertically disposed inner baffle being directed substantially vertically downwardly and the discharge jets in the burner disposed toward the outer baffle being directed outwardly at an angle so that the greatest heat under the hood is applied to the plates directly adjacent the lines of demarcation between the tension and compression zones, and the heat applied is gradually reduced as the distance from these lines increases.

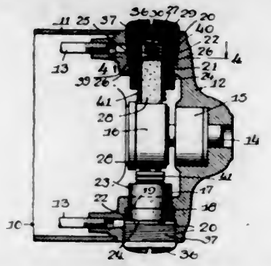
2,449,761
WINDOW SASH MOUNTING AND OPERATING MECHANISM
Robert E. Bemis, Houston, Tex.
Application July 25, 1945, Serial No. 606,985
8 Claims. (Cl. 268—108)

5. The combination with a window casing and a window sash therein; of a transverse shaft on the casing, cross heads fixed on the shaft, lift levers pivoted at one end to the casing and whose other ends are pivoted to the lower portion of the sash, links connecting said levers to corresponding ends of the cross heads, swinging plates pivoted at their upper ends relative to the casing, links connecting the lower ends of the plates to the sash, links connecting the other ends of the cross heads to said plates, said cross heads being effective to swing said levers and plates about their pivots as the shaft is rotated back and forth to move the sash away from, and in sealing relation with, the casing, means for rocking said shaft comprising an arm fixed thereto, a link connected to the arm and means for manually reciprocating the link longitudinally back and forth to rock the shaft.



2,449,762
CHANCE SPINNER DEVICE
John Henry Biehl, Westmont, N. J.
Application March 15, 1944, Serial No. 526,529
4 Claims. (Cl. 273—138)

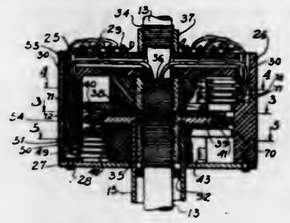
3. Spinner means adapted for use in designating plays employable in connection with a base-ball game apparatus of the class described comprising horizontal base means adapted to be mounted on or used in connection with a prescribed base-ball game apparatus of the type shown and described, a pair of vertical uprights connected to and rising from said base means, a horizontal shaft supported between said uprights, a spinner swingably mounted between its ends on said shaft, said spinner including a rod, shoulder-forming elements secured to the respective outer ends of said rod, indicator balls, said balls being freely slidable on the rod-ends between the shaft and shoulder-forming elements, said rod being freely swingable through a circle of 360°, impact means pivotally mounted between the lower portions of the uprights and swingable through an arc and swingable in the path of rotation of the outer ends of said rod, return means for said impact means for returning and retaining said means in a predetermined ready-to-use position, and manual operating means connected with said impact means.



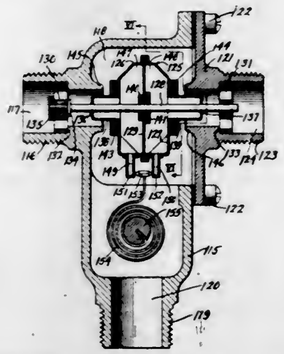
2,449,763
MUCILAGE CONTAINER
Frank G. Blackman, Bluefield, W. Va.
Application June 29, 1945, Serial No. 602,299
2 Claims. (Cl. 222—425)

1. A device of the class described comprising a reservoir adapted to contain liquid and having a substantially air-tight lid, a cylindrical receptacle, a feed pipe connecting the reservoir to the receptacle and having a valve therein to admit a limited volume of liquid to the receptacle, and a pair of hingedly connected semi-cylindrical cover sections closed at their tops and adapted for closing against the sides of the receptacle in tight fitting engagement therewith, and means within

the cover sections for suspending a brush in the liquid of the receptacle.



2,449,764
BRUSH HOLDER
Gary G. Bluemink, Racine, Wis., assignor to The Dumore Company, Racine, Wis., a corporation of Wisconsin
Application April 10, 1946, Serial No. 660,887
10 Claims. (Cl. 171—323)



1. A brush supporting construction comprising a motor housing having an aperture, an outwardly facing shoulder in said aperture, a brush holder disposed within said aperture, a flange on said brush holder engaging said shoulder to limit the inward motion of said brush holder with respect to said motor housing, means interlocking with the outer portion of said aperture and limiting the outward motion of said brush holder to maintain the same in a fixed position with respect to said motor housing, a brush slidably mounted in said brush holder, and a spring confined between said brush and said interlocking means to urge said brush inwardly, said brush holder including an insulating sleeve to insulate said brush from said motor housing.

2,449,765
MULTIPLE CIRCUIT STAND LAMP
Paul L. Brattain, Azusa, Calif.
Application January 2, 1945, Serial No. 571,084
1 Claim. (Cl. 200—8)

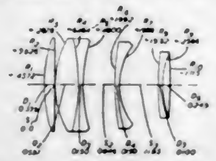
A rotary multiple circuit switch comprising a housing, a rotatable member extending axially thereof, a disc fixed upon the rotatable member within the housing, a pawl carried by said disc and projecting above the upper face thereof, a pawl carried by said disc and projecting from the lower face thereof, a pair of rotors, one disposed on each side of said disc and freely rotatable around the axis thereof, a continuous circular row of ratchet teeth projecting from the opposed faces of said rotors, one set of teeth to be engaged by the upwardly projecting pawl, and the other set of teeth to be engaged by the lower projecting pawl, the respective sets of teeth and pawls being faced in opposite directions, and providing for movement of the rotors a desired increment of rotation in opposite directions, a plurality of electric contact segments arranged circumferentially on each of said rotors, the contact segments on each of the rotors being separated from each other by intermediate dielectric surfaces, a set of contact fingers mounted within the switch housing and standing in the path of travel of the contact segments and dielectric surfaces of each of said rotors as the same is rotated, and a separate group of electric circuits including each set of contact fingers and adapted to be completed successively by the contact segments of the rotor directly associated therewith and interrupted by the intermediate dielectric segments of said rotor.

2,449,766
MEANS FOR PRODUCING UNIFORM FLUID MIXTURES
Clyde A. Brown, Chicago, Ill., assignor to Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application March 1, 1944, Serial No. 524,546
4 Claims. (Cl. 236—12)

1. A mixer valve comprising a housing, an inlet in said housing for each of two fluids under pressure, valve means associated with each of said inlets, an outlet in said housing for the mixed fluid, a mixing chamber in said housing, a fluid container within the housing, a flexible membrane separating the container into adjoining fluid chambers each of which communicates with an inlet, a drain for each fluid chamber, pilot valve means in each drain, said pilot valve means

being mounted to selectively open one drain and close the other, said membrane being secured substantially at its center thereby to enable the container to shift bodily as the membrane is deformed, said valve means being operable by movement of said container to alternately open one inlet and close the other in varying degree, thereby to control the admission of fluid to the mixing chamber.

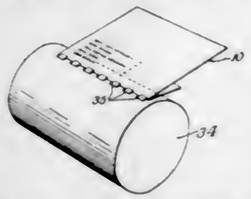
2,449,767
STRETCHER WITH SKELETAL TRACTION FACILITIES
Charles C. Carpenter, Grand Forks, N. Dak.
Application August 2, 1945, Serial No. 608,439
7 Claims. (Cl. 128—84)



1. A stretcher having skeletal traction facilities comprising a body supporting member, a plurality of handle members extending longitudinally and outwardly from the ends of said body supporting member and an anchoring element to which a traction tie may be secured connected with one of said handle members and extending inwardly and laterally therefrom in spaced relation to the adjacent end of said body supporting member and having a hooked extremity, spaced inwardly some distance from said handle member whereby substantially straight line strain may be applied to a limb of the human body.

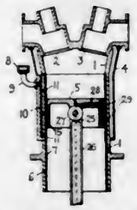
2,449,768
HEAT-TREATING MAGNESIUM-ALLOY DIE CASTINGS
Robert C. Cornell, Jackson, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application August 1, 1946, Serial No. 687,703
4 Claims. (Cl. 148—21.90)

2. A heat-treatment for pressure die-cast articles formed of a solution-heat-treatable magnesium-base alloy containing from 4 to 12 per cent by weight of aluminum as the major alloying element which consists in heating the as-cast article at an aging temperature in the range of 325° to 700° F. for a time sufficient to effect substantial precipitation, and then subjecting the article to solution-heat-treatment at a temperature of at least 715° F.



2,449,769
MODIFIED OPTICAL OBJECTIVE HAVING A SIMPLE DIVERGENT COMPONENT AIR SPACED BETWEEN TWO COMPOUND CONVERGENT COMPONENTS
Arthur Cox, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain
Application April 18, 1946, Serial No. 663,087
In Great Britain March 13, 1946
12 Claims. (Cl. 88—57)

1. An optical objective corrected for the spherical and chromatic aberrations, coma, astigmatism and field curvature, and comprising a simple divergent member, a front convergent member consisting of a simple convergent component disposed in front of and slightly separated from a compound convergent component, and a rear convergent member in the form of a doublet having a biconvex convergent element cemented to a meniscus divergent element made of a material having mean refractive index lower than and Abbé V number at least 10 higher than those of the material of the associated convergent element, the axial air separation between the di-

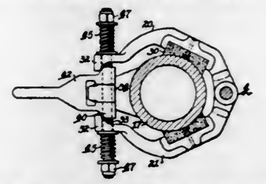


vergent middle member and the convergent front member lying between .07 and .12 times the equivalent focal length of the objective, whilst the axial air separation between the divergent middle member and the convergent rear member lies between 1.0 and 2.0 times that between the divergent middle member and the convergent front member.

2,449,770
METHOD OF RUNNING DIRECT PROCESS GUMMED UNITS
Harold L. Dempsey, Columbus, Ohio, assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application April 2, 1945, Serial No. 586,123
3 Claims. (Cl. 101—131)

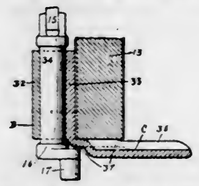
1. In the method of duplicating from reverse copy whereby to transfer like and unlike copy from a master to a plurality of moistened copy card unit strips of like width, the steps of placing general data constituting the like copy on one area of a master and uniformly spaced lines of specialized data constituting said unlike copy on another adjacent area of said master, preparing an assembly of unit strips in overlapped stepped relation detachably fastened together with the offset portion of each card of said strip of a width to receive a line of said specialized data, and with the general data receiving portions of aid overlapped cards covered by the cards overlapping the same, folding the master back on itelf between the area having the general data thereon and the area having the specialized data thereon with the general data carrying area underneath, pressing the moistened card assembly with its offset portions in alignment with the lines of specialized data on said specialized data carrying area into engagement with the exposed face of said master to thereby transfer a line of specialized data respectively to each of said card offsets, separating said cards from each other by detaching said cards from said assembly, reversing said master in such folded condition so as to have the area thereof with the general data thereon uppermost, and placing the individual moistened cards successively against the area of said master then exposed to thereby imprint said general data upon said cards.

2,449,771
LINER FOR ENGINE CYLINDERS
Charles H. Dolan, II, Old Greenwich, Conn.
Application September 28, 1945, Serial No. 619,161
9 Claims. (Cl. 309—3)



4. A cylinder for an engine or the like comprising a tubular insert in its bore, the insert being made of a metal capable of forming an amalgam with mercury; a layer of mercury on the inner surface of the insert, the insert having a plurality of openings in communication with a common channel in the wall of the cylinder; a tube extending from the common channel to the outside; and a compression cup at the end of the tube for forcing mercury into the cylinder through the channel and openings.

2,449,772
HERMETICALLY SEALED SUBMERSIBLE PUMPING STRUCTURE
Frederick C. Gilman, Pompton Lakes, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application March 1, 1945, Serial No. 580,469
7 Claims. (Cl. 103—87)

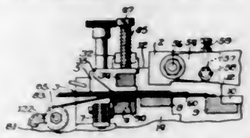


1. In a submersible pumping structure, a housing, a rotative drive crank in said housing, a rotative driven crank in said housing, a fluid-tight wall between said drive crank and said driven crank and having a deformable portion, said fluid tight wall being connected in fluid tight relationship to said housing, and a nutating operating connection between said drive crank and said driven crank for transmitting rotary motion from the drive crank to the driven crank, said operating connection extending through said deformable portion and being fixedly connected therewith to provide a fluid-tight joint between the deformable portion and said operating connection, said drive crank and driven crank being positioned to rotate about a common axis, said nutating operating connection comprising a shaft-like member arranged with its longitudinal axis at an angle to said common axis, said deformable portion being fixed to said shaft-like member in a plane at right angles to the longitudinal axis of the shaft-like member, said driven crank having a bell-like contour conforming to the contour of said deformable portion and being spaced slightly therefrom.

2,449,773
SPINDLE BRAKE
Robert Hargreaves and Albert O. Roy, Whitinsville, Mass., assignors to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application May 18, 1946, Serial No. 670,730
1 Claim. (Cl. 188—166)

A spindle brake comprising a pair of pivoted arms encircling the spindle and having braking pads to engage said spindle and having cam end surfaces, springs to apply braking pressure to said arms and pads, a rod extending loosely through the ends of said arms and on which said springs are loosely mounted, a hand lever loosely mounted on said rod and between the outer ends of said arms and provided with axially projecting cam lugs engageable with the cam surfaces at the outer ends of said arms to force said arms apart, and abutting means on the opposite ends of said rod to resist the outward thrust of said springs.

2,449,774
RETRACTABLE KEEPER FOR DOOR FASTENERS
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application June 18, 1947, Serial No. 755,417
5 Claims. (Cl. 292—241)



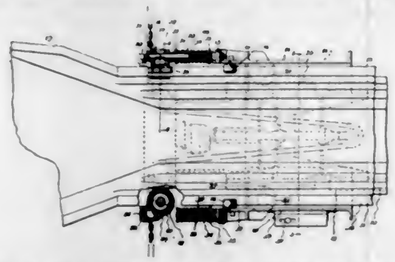
1. In a door fastener for a hinged door of a container, the combination with a rotary operating bar mounted on the door; of a pivoted keeper mounted on the container; a cam arm on said door engageable with the keeper to swing the same to operative position; and crank means on said bar engageable with the keeper.

2,449,775
CATALYTIC SYNTHESIS OF HYDROCARBONS
Wealtha Eloise Hendriksen, New York, N. Y., assignor to Hydrocarbon Research, Inc., New York, N. Y., a corporation of New Jersey
No Drawing. Application August 24, 1946, Serial No. 692,938
9 Claims. (Cl. 260—449.6)

2. The process for the catalytic synthesis of compounds of the class consisting of hydrocar-

bons and oxygenated hydrocarbons by the reduction of a carbon oxide with hydrogen, which comprises passing synthesis gas containing essentially carbon oxide and hydrogen, under reaction conditions, in contact with a catalyst mass containing a metal of the iron group having a minor proportion of tellurium alloyed therewith.

2,449,776
UNIT STRIP ASSEMBLY METHOD AND APPARATUS
Arthur L. Hess, Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application February 24, 1944, Serial No. 523,661
12 Claims. (Cl. 270—58)



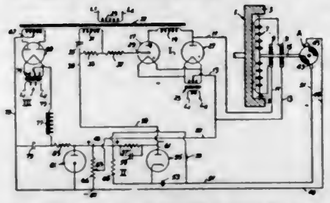
1. In a machine of the character described, the combination with a sheet feeding device of mechanism operable to position and hold envelopes, sheets, cards and the like delivered thereto by said device in overlapped relation with a portion of each envelope, sheet or card exposed at one side of the assembled group, and means operable by said mechanism to press an adhesive tape in contact with one side face of the assembled group while being held in overlapped relation by said mechanism.

5. In a machine of the character described having means to arrange units such as envelopes, sheets, cards and the like in overlapped relation with a like portion of each unit beneath the top one exposed to receive a legend, means to secure the units together as they are so arranged, comprising a pair of gummed tape spools, a framework supporting said spools, guide rollers on said framework guiding tape from said spools to the unit arranging means, and moistening means on said framework for engaging the gummed tape, said moistening means comprising a first moistener adjacent to each spool adapted to initially moisten the tape, and a second moistener for each tape spaced a substantial distance along the path of movement of the tape from the first moistener and adjacent to the arranging means.

2,449,777
FEEDING MECHANISM FOR SHAKER CONVEYERS
John H. Holstein, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application June 21, 1946, Serial No. 678,379
18 Claims. (Cl. 198—220)

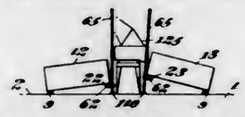
1. In a feeding device for shaker conveyors, a reciprocating trough, an extensible trough, and means for moving said extensible trough relative to said reciprocating trough including two friction grip blocks reciprocably moved by one of said troughs and disposed on each side of the other of said troughs for engagement therewith during alternate strokes of the conveyor, fluid operated means for moving said grip blocks to a gripping position to engage said other trough, valve means for supplying fluid under pressure to and releasing fluid from said fluid operated means during alternate strokes of the conveyor, and means for operating said valve means including a shoe, a control lever for moving said shoe into position to cause relative movement between said valve means and said shoe during reciproca-

tion of the conveyor, and an operative connection between said shoe and said valve means.



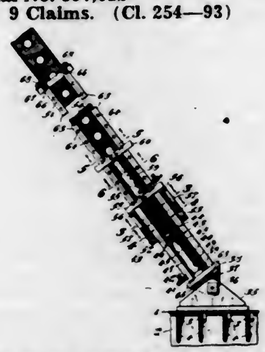
2,449,778
CLOTHES POLE AND CAP THEREFOR
Frank John Hyde, Sharon, Pa.
Application August 30, 1946, Serial No. 694,000
2 Claims. (Cl. 248—353)

2. In a cap for a clothes pole, including an inverted cup-shaped member including a closed end and a substantially cylindrical side wall terminating in a free edge, and means mounting said member on one end of a clothes pole with said side wall concentrically disposed about said pole; the improvement comprising a radially outwardly-directed flange formed on said free edge of said member, said flange being formed with at least one longitudinally-extending groove therethrough, at least one clothes line-engaging hook, said hook including a substantially straight shank portion, means mounting said portion on said cap, said shank portion including a lower end extending through said groove and downwardly along said pole in laterally-spaced relation thereto, said lower end terminating in a laterally-directed loop, said loop terminating in an upwardly-directed hook portion, said hook portion being laterally spaced from said shank portion and inwardly inclined thereto.



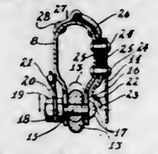
2,449,779
SPEED CONTROL FOR DYNAMOELECTRIC APPARATUS
Ralph L. Jaeschke, Kenosha, Wis., assignor to Martin P. Winther, Waukegan, Ill., as trustee
Application February 21, 1947, Serial No. 730,059
10 Claims. (Cl. 172—284)

1. An electronic speed control for dynamoelectric apparatus having a rotating shaft and an exciter coil adapted variably to control the speed of said shaft, comprising a grid-controlled rectifier means adapted variably to excite said coil, a frequency-modulator circuit for producing electrical impulses of substantially constant amplitude proportional in frequency to the speed of the shaft, a frequency-responsive conversion circuit fed by said modulator circuit and adapted to produce a variable D. C. potential dependent on the frequency of said impulses, and a source of substan-



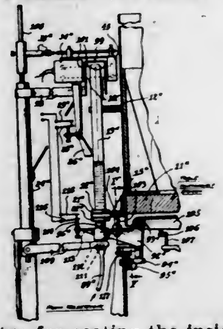
tially constant D. C. potential connected in opposition to said variable D. C. potential to produce a grid-controlling potential, said grid-controlling potential being applied to the grid-controlled rectifier means variably to energize said coil to maintain substantially constant the speed of said shaft.

2,449,780
WING RAISING DEVICE FOR FLOATING DRY DOCKS
William Howe Jameson and E. Leland Durkee, Bethlehem, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania
Application March 18, 1944, Serial No. 527,091
23 Claims. (Cl. 114—45)



22. A dry dock having a pontoon hull, a wall section thereon having hinged connection with said hull, a column supported on the hull and movably connected to said wall section, and power means coupled to act upon said column to move said wall section about said hinged connection to upright or horizontal position.

2,449,781
APPARATUS FOR LIFTING MASSIVE OBJECTS
William Howe Jameson and E. Leland Durkee, Bethlehem, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania
Original application March 18, 1944, Serial No. 527,091. Divided and this application June 5, 1945, Serial No. 597,612
9 Claims. (Cl. 254—93)



1. A jack strut comprising, a load support comprising withdrawable pins, a pivotally movable strut fulcrum support, a jacking column adapted to engage said pins selectively at a plurality of apertures spaced along its axis and comprising an abutment slab at its lower end, a hydraulic jack cylinder secured to said strut fulcrum support, and a hydraulic jack ram operable within said jack cylinder and comprising at its upper exterior end an abutment cap and an upwardly extending guide member, the said jacking column being adapted for telescopic engagement with said guide member and in abutting engagement with said abutment cap.

2,449,782
BICYCLE STOPLIGHT
Chester C. Knitter, Chicago, Ill.
Application November 19, 1946, Serial No. 710,766
1 Claim. (Cl. 200—52)

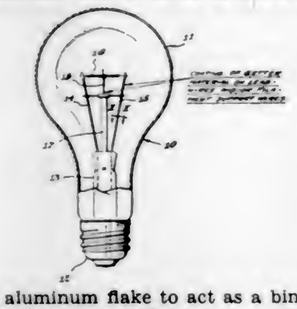
In a device of the character described including bicycle brake means provided with a brake lever, electrical contact means of hemispherical configuration secured to the said brake lever, a pair of guiding ears on the bicycle frame adjacent the free end of the said brake lever and provided with elongated slotted portions confining the said electrical contact means to limited movement, single resilient contact means of partially spherical configuration secured to the said bicycle frame and insulated therefrom, a protective cover plate secured over the said resilient contact means, and binding post means on the said electrical contact means and the said resilient contact means for effective connection to an electrical circuit, the actuation of the said brake lever effectuating a closed circuit, the said circuit remaining open normally and during the period when the said brake means is in inoperative position.

2,449,783
APPARATUS FOR COATING THE INSIDE SURFACES OF TUBULAR VITREOUS ENVELOPES
Alfred H. Laidig, Bloomfield, and Frederick T. May, Verona, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 30, 1943, Serial No. 504,372
9 Claims. (Cl. 91—18)

1. Apparatus for coating the inside surface of a light-pervious vitreous envelope comprising

means to hold the envelope vertically, means for automatically feeding coating fluid thereto through its lower end, means for directing a beam of light through its upper end portion, means for automatically terminating the flow of said fluid when it intercepts said light beam, and means for then automatically withdrawing said fluid.

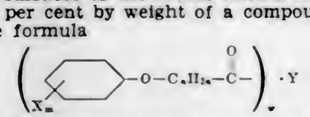
2,449,784
SAFETY DEVICE FOR MOTORISTS
Kerupe Hrant Liman, Rye, N. Y.
Application February 26, 1947, Serial No. 731,166
2 Claims. (Cl. 116—114)



1. A device of the class described comprising a pin pointed at its upper end, a supporting plate connected to the lower end of said pin, a neck band carried by the plate for holding the plate in position in front of the wearer's neck, and a knob having a bore flared toward one end removably carried by the pointed end of said pin, said pointed end projecting slightly outward from said knob when in one position and said knob being invertible to encase said pointed end when the device is not in use.

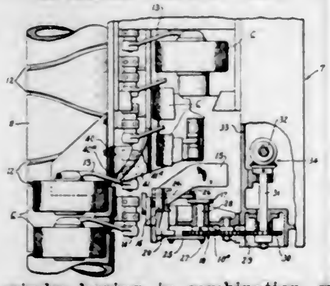
2,449,785
COMPOSITION AND PROCESS FOR CURING LUMBER AND PRODUCT
Alfred Lippman, Jr., and Rock L. Comstock, Weeks, and Edward B. Benjamin, New Orleans, La., assignors to Bay Chemical Company, Inc., New Orleans, La., a corporation of Louisiana
No Drawing. Application April 1, 1943, Serial No. 481,478
21 Claims. (Cl. 117—147)

17. As a product of manufacture, lumber having surface layers thereof impregnated with a composition consisting essentially of approximately 1 to 8% of alkaline alkali metal phosphate, approximately 3 to 8% of alkali metal sulfate and approximately 84 to 96% of alkali metal chloride.



2,449,786
GETTER
George H. Lockwood and Donald F. Way, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 5, 1943, Serial No. 478,116
8 Claims. (Cl. 316—25)

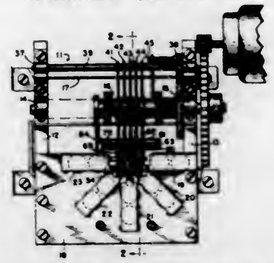
1. A getter for incandescent electric lamps consisting essentially of a major proportion of at least one free powdered metal selected from the group consisting of zirconium, thorium, and cerium, admixed with a minor proportion of degreased aluminum flake to act as a binding and auxiliary clean-up agent.



2,449,787
PRESERVATION OF CELLULOSIC MATERIALS
Frederick J. Meyer, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application October 9, 1944, Serial No. 557,931
7 Claims. (Cl. 117—138.5)

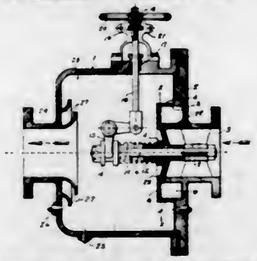
1. The process of protecting textile materials of cellulosic origin against attack by mildew and rot which includes the step of depositing on the fibrous surfaces of the textile material from 0.5 to 10.0 per cent by weight of a compound having the formula

wherein X represents a halogen selected from the group consisting of chlorine, bromine, and iodine, Y represents a member of the group consisting of hydrogen, ammonium and a salt-forming metal, *n* is an integer from 1 to 3, inclusive, *m* is an integer not greater than 5, and *w* represents an integer equal to the valency of Y.



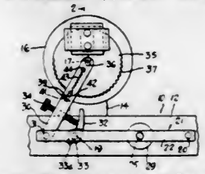
2,449,788
WINDER
Burt A. Peterson, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application February 7, 1945, Serial No. 576,546
13 Claims. (Cl. 242—35.5)

1. A winder having, in combination, a drum, a plurality of winding units each comprising a pivotal cheese support, and a traveling mechanism having means operative to swing the cheeses of successive units from thrown-out position into running position relative to said drum including a lifting device and an actuator therefor, said device being movable by said actuator directly into



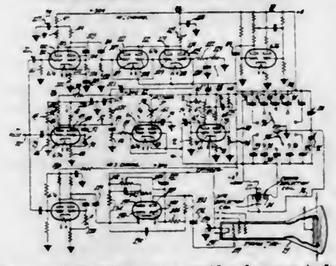
engagement with each of the cheeses in their thrown-out positions to lift the same upwardly and rearwardly toward their running position.

2,449,789
MECHANICAL DECIPHERING SYSTEM
Albert H. Reiber, deceased, late of Evanston, Ill., by Emily Y. Reiber, executrix, Evanston, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application July 29, 1943, Serial No. 496,552
10 Claims. (Cl. 178—22)



1. In combination, means for sensing the coded record of a tape perforated according to a predetermined plan, a device for deciphering telegraphic messages electrically connected to said means, said device comprising signal controlled means responsive to received telegraph signals, a plurality of cams rotated in timed relation with the receipt of signals by said signal controlled means, a corresponding plurality of cam followers, a plurality of pairs of levers, one pair associated with each cam follower, a series of magnets connected to said sensing means for determining the positionment of said levers, one of said magnets associated with each pair of levers, means controlled by said signal controlled means for also governing the positionment of said levers, and means actuated by said cam followers under the combined influence of said tape sensing means and said signal controlled means to control printer functions.

2,449,790
SEPARATOR
Joseph F. Sebald, Bloomfield, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application March 17, 1945, Serial No. 583,192
11 Claims. (Cl. 183—82)



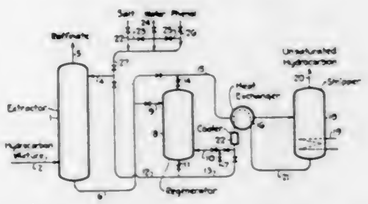
1. In a separator of the centrifugal type, a housing having an inlet for gas or vapor, a plurality of arcuate nozzles in said housing forming curved flow passages to impart centrifugal force to the vapor or gas flowing therethrough, said nozzles including vanes adjustably carried by said housing and subject to movement under variations in the quantity flow of vapor into the housing to vary the cross-sectional area of the curved flow passages to produce relatively constant velocity of vapor or gas through the passages through wide variations of flow rate of vapor or gas to the separator, and means for applying a compression load to said vanes to provide a predetermined differential pressure between the vapor or gas entering the housing and the separation space in the interior of the housing.

2,449,791
WORK HOLDER FOR LAPPING LATHES
Henry H. Silverman, Jamaica, N. Y.
Application December 10, 1946, Serial No. 715,272
1 Claim. (Cl. 51—238)

A device including a support having a plurality of holes therein, a horizontal carrier including a plurality of rods slidably mounted in said holes, a frame having a plurality of bars fixedly mounted on the rods, said bars being spaced from each other to provide a vertical opening therebetween, a screw connected to the support and passing through the bars in parallel relation to the rods, a nut on the screw fitted in said space for actuating the frame toward and away from the support, and arm fitted in said space, a pivot pin for the lower end of the arm passing through the bars, an adjusting screw for angularly setting the arm carried by the latter, the frame having a seating portion for the end of the screw, a disc mounted on the arm at the upper end thereof for angular movement in the plane of the disc, which plane is parallel to the frame, the disc having teeth along the lower edge thereof, means carried by the arm for selectively releasably engaging the teeth to set the disc, a work table mounted on the disc at the upper part thereof for angular movement about a pivot at right angles to the plane of the disc, the work table having a depending flange, a frame element connected to the disc and extending around the flange in spaced relation thereto, and set screws in the frame above and below the pivot of the work table and engaging the flange to cause angular setting movement of the work table.

2,449,792
CATHODE-RAY TUBE SCANNING CIRCUIT
Richard L. Snyder, Jr., Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1946, Serial No. 644,524
10 Claims. (Cl. 315—22)

1. The combination of a cathode ray tube having a cathode and a ray control grid and a pair



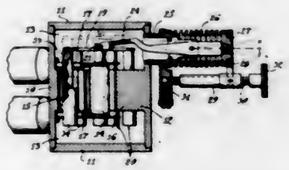
of ray deflecting coils, a pair of tuned circuits each including a different one of said coils, means responsive to an electrical pulse for producing oscillations in the first of said tuned circuits, means responsive to said electrical pulse producing in the second of said tuned circuits oscillations which are in quadrature with the oscillations of said first tuned circuit, and means responsive to said electrical pulse for biasing off the ray of said tube at the end of a predetermined number of said oscillations.

2,449,793

EXTRACTION OF UNSATURATED HYDROCARBONS AND SELECTIVE SOLVENT THEREFOR

Mott Souders, Jr., Piedmont, and Frederic A. French, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application September 22, 1947, Serial No. 775,494
19 Claims. (Cl. 260—677)



13. A process for the separation of unsaturated hydrocarbons from a hydrocarbon mixture containing the same which comprises contacting said hydrocarbon mixture with a solution of a silver salt of a sulfonated aromatic compound in phenol and a material chosen from the group consisting of water and ethylene glycol.

2,449,794

ELECTRON DISCHARGE DEVICE

Howard L. Steele, Jr., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 12, 1944, Serial No. 558,298
15 Claims. (Cl. 250—27.5)

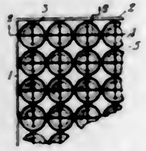
1. A cavity resonator with a side wall, tuning means therefor comprising a prong in said cavity resonator, means at an end of said cavity resonator supporting said prong, said means being rotatable for revolving said prong within the confines of said cavity resonator and varying the capacitative relation of the prong to said side wall, said prong having one side in direction of rotation of one material and the other side in direction of opposite rotation of another material, and means connected to said means for rotating said prong.

2,449,795

PIPE COUPLING

Crawford K. Stillwagon, Houston, Tex., assignor to Well Equipment Mfg. Corp., Houston, Tex., a corporation of Texas

Application February 14, 1944, Serial No. 522,331
1 Claim. (Cl. 285—194)



A pipe coupling formed of clamp members hinged together at one side, releasable means for securing said members together around adjacent pipe ends at the other side, inside teeth at the ends of each member for engaging the respective pipe ends, an annular seal ring adapted to surround the adjacent ends of the pipe sections within the coupling and sealing the joint between said adjacent ends, said seal ring being formed of resilient material and having an inside, annular cavity provided with an inside annular slit extending inwardly from the cavity through the wall of the gasket, an annular band formed of rigid material within, and extending entirely around, said cavity and provided with an annular inside radial flange which extends inwardly through the slit beyond the inside of the gasket to form a yieldable stop.

2,449,796

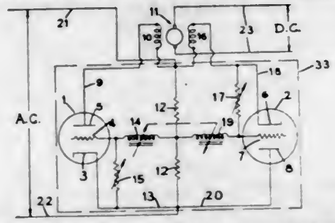
DOOR MAT

Joseph Suskind, Newport News, Va.

Application March 14, 1945, Serial No. 582,667
7 Claims. (Cl. 15—238)

1. A door mat comprising a multiplicity of cup shaped bottle cap members and means to secure said members in spaced substantially co-planar relationship; said means including wire members, said cup shaped bottle cap members having flanges that extend upwardly from a closed bottom portion, said wire members extending through apertures in said flanges, said apertures lying below the upper edges of said flanges and above each bottom portion.

2,449,797



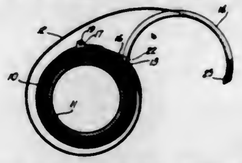
ELECTRONIC CONTROL CIRCUIT

George A. Waldie, Worthington, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

Original application October 20, 1943, Serial No. 506,983. Divided and this application September 20, 1947, Serial No. 775,215
2 Claims. (Cl. 318—297)

1. In combination in an electrical control circuit for varying the rate and direction of rotation of a direct current motor having an armature, a direct current source for exciting said armature, and first and second field windings associated with said armature, the combination of a first and second triode each having a cathode, an anode, and a grid, an alternating current supply including first and second leads, means connecting said first lead to one end of each of said field windings,

means connecting said second lead to the cathode of said first triode and to the anode of said second triode, means connecting the other end of said first field winding to the anode of said first triode, means connecting the other end of said second field winding to the cathode of said second triode, a variable resistor connected between the cathode and grid of each of said triodes, a pair



of fixed resistors connected in series across said first and second leads, a first variable reactor connected between an intermediate point between said fixed resistors and the grid of said first triode, and a second variable reactor connected between said intermediate point and the grid of said second triode, and mechanically operated means for simultaneously differentially adjusting said reactors.

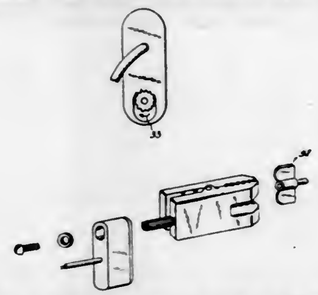
2,449,798

HOSE CLAMP

Edwin L. Weber, Venice, Calif.

Application October 18, 1943, Serial No. 506,682
5 Claims. (Cl. 24—19)

1. A clamp of the character described which includes: an elongated flexible strap adapted to wrap around the article to be clamped; an arcuate saddle attached to the inner end of said strap and having a portion adapted to act as a fulcrum; and an arcuate clamping arm underlying and supporting said strap having its outer end attached to the outer end of said strap, and its inner end adapted to seat on the fulcrum of said saddle, whereby said clamping arm may be rotated inwardly about said fulcrum to draw and retain said strap over said fulcrum and said arm along the entire length of the latter and about said article being clamped.



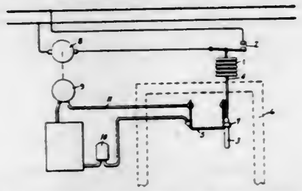
2,449,799

SWITCH ARRANGEMENT

Octavio Jose Alvarez and Ertogroul Osman, New York, N. Y., assignors of one-half to Alvarez Patent Corporation and one-half to Ertogroul Osman, both of New York, N. Y.

Application September 18, 1946, Serial No. 697,685
6 Claims. (Cl. 200—153)

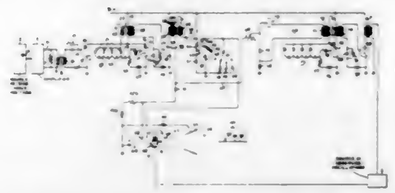
3. A switch comprising switch means including two terminals and a switch member adapted to make contact between said terminals when said switch means are in contact making position and to break said contact when said switch means are in contact breaking position; actuating means including a clamp member adapted to be attached to operating means and a shaft member connected to said clamp member and adapted to turnably support said switch means; and gear means interposed between said shaft member and said switch means and constructed so as to be adapted to transmit motion impulses from said shaft member to said switch



means only when said switch means are supported by said shaft member in said contact breaking position but not when said switch means are supported by said shaft member in said contact making position.

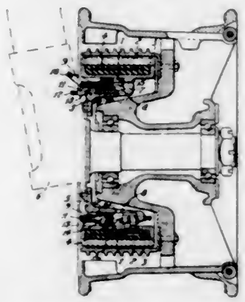
2,449,800

REFRIGERATION CONTROL APPARATUS



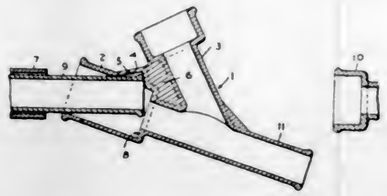
Edgar H. Ayers, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application December 8, 1944, Serial No. 567,268
3 Claims. (Cl. 62—4)



1. The combination with a refrigerator provided with a cooling compartment, an evaporator in said compartment and means including driving means for maintaining a predetermined low temperature in said evaporator, of temperature responsive means comprising a sealed container provided with a movable portion and elongated member, a gas in said container adapted to be gasified at the normal temperatures of the air in said cooling compartment between predetermined maximum and minimum values but condensed to a liquid at temperatures substantially as low as the temperature of said evaporator, control means for said driving means operated by said movable portion in response to changes in the pressure of said gas to start and stop said driving means, and means mounting said elongated member in an upright position in said cooling compartment with an upper portion of said elongated member of predetermined length in good thermal relation with said evaporator and a lower portion of said elongated member extending downward into said cooling compartment so that the wall of said upper portion is maintained by said evaporator at a low temperature at which said gas is condensed on said wall and runs down said wall to the lower portion of said tubular member where it is gasified by the higher temperature of the air in said cooling compartment thereby to provide a rapid transfer of heat from said air to said gas and control of said driving means in response to the temperature of said air.

2,449,801
OSCILLOGRAPH APPARATUS
Frank J. Bias, Scotia, and Harold W. Lord, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application November 17, 1944, Serial No. 563,920
2 Claims. (Cl. 315—24)

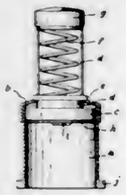


1. An apparatus for analyzing the characteristics of transient electric waves derived from a triggered wave source comprising, in combination, means for projecting an electron beam against a sensitive surface, means for deflecting said beam along a first axis in response to said waves to be analyzed, a source of recurrent potential pulses each of predetermined duration, beam deflecting means controlled by said pulses for sweeping said beam across said surface along a second transverse axis during each of said pulses, each sweep being initiated at the leading edge of a pulse, means for integrating said pulses to produce a voltage which increases in one direction throughout said interval, means responsive to increase in said voltage above a predetermined value to initiate a delayed trigger pulse, means for triggering said wave source in response to said delayed pulse, and means for adjusting the rate of increase of said voltage thereby to adjust the delay between initiation of said sweep and triggering of said source.

2,449,802
FLUID PRESSURE OPERATED BRAKE AND THE LIKE
Henry James Butler, Beechcroft, Sutton Coldfield, England, assignor to Dunlop Rubber Company Limited, London County, England, a company of Great Britain
Application May 31, 1946, Serial No. 673,380
In Great Britain June 5, 1945
6 Claims. (Cl. 188—152)

1. Brake apparatus which comprises a rotatable brake drum, a fixed support, brake shoes on said support, said brake shoes being secured against rotation and movable toward and from said brake drum, an expansible element between said support and said brake shoes, an annular fluid chamber on said support and communicating with said expansible element, said chamber having a narrow extension and a piston slidable in said chamber, said piston having a narrow extension extending into the extension of said chamber, the extension of said chamber having a fluid inlet.

2,449,803
CUTIN FITTING
William J. Collison, San Diego, Calif.
Application August 9, 1946, Serial No. 689,486
1 Claim. (Cl. 285—210)

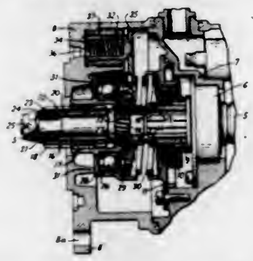


As a new article of manufacture, a cut-in fitting comprising a pipe having a hub at one end and a branch portion partly overhanging said hub, said hub provided within its side edges and on its top with an outwardly-extending transversely-positioned oblong bulge portion, said oblong bulge portion being provided with a pipe-receiving recess, and an integral longitudinally-extending web on the outside of said branch portion and integral with only the middle of the inner face of said oblong bulge portion, substantially as shown and described.

2,449,804
NITROALCOHOL ESTERS OF ACRYLIC ACID AND INTERPOLYMERS PRODUCED FROM THE SAME
Gaetano F. D'Alelio, Northampton, and James W. Underwood, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
No Drawing. Original application February 1, 1940, Serial No. 316,816. Divided and this application December 22, 1944, Serial No. 569,424
11 Claims. (Cl. 260—83)

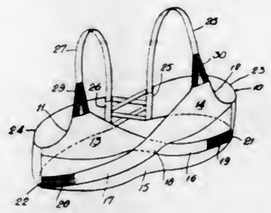
1. An aliphatic nitroalcohol ester of acrylic acid.

2,449,805
AUTOMATIC CUPPING DEVICE
Cesar Develay and Gaston Marcel Galvier, Paris, France
Application February 1, 1947, Serial No. 725,800
In France February 25, 1946
1 Claim. (Cl. 128—300)



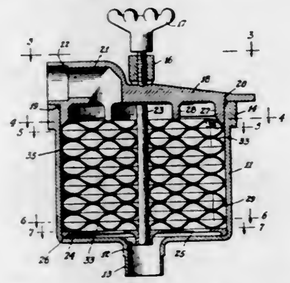
An automatic cupping device comprising a cylinder which is intended to be applied by its open under end upon the body of the patient and a piston movable in said cylinder and secured to a member formed as a pipe closed by a plug at its upper end and sliding through an opening of the cylinder top cover, said pipe containing a compression spring resting by its upper end upon the pipe plug and by its lower end upon a key supported by the cylinder cover and being able to glide into two opposite longitudinal slots of the pipe, the lowering of the latter compressing the spring and the pipe being maintained in that position by a yoke pivoting over the cylinder cover, and the piston being raised when the pipe is unlatched operating thus a cupping effect as the lower side of the piston.

2,449,806
COLD HOBBABLE STEEL
Maurice C. Fetzer, Wyomissing, and William H. Kemper, Temple, Pa., assignors to The Carpenter Steel Company, Reading, Pa., a corporation of New Jersey
No Drawing. Application June 12, 1945, Serial No. 599,120
3 Claims. (Cl. 75—126)



1. A cold hobbable steel containing carbon about 0.05 to 0.15 per cent, manganese about 0.10 to 1.00 per cent, silicon about 0.10 to 0.25 per cent, chromium about 4.00 to 10.00 per cent, vanadium up to 0.50 per cent, a metal selected from the group consisting of molybdenum and tungsten in the proportion of about 0.90 to 3.0 per cent molybdenum and about 1.5 to 3.0 per cent tungsten and the balance substantially iron, said steel having a Rockwell C hardness of about 25–43 when air cooled from 1700°–1900° F., a hot hardness of about 325–360 Brinell at 800° F., after air cooling from 1700°–1900° F., and when case hardened providing a case having a Rockwell C hardness of about 60–65 when air cooled from 1700°–1900° F.

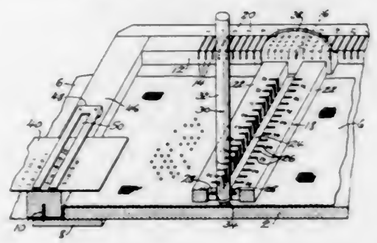
2,449,807
COUPLING MEANS
Jakob R. Frei, Sidney, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application May 14, 1943, Serial No. 487,025
2 Claims. (Cl. 64—24)



1. In apparatus of the class described, a pair of rotatable members having external splines thereon, the splines on at least one of said members being spiral, a coupling sleeve having two sets of internal splines operatively meshing with said external splines, an annular element surrounding said coupling sleeve, means, such as a roller or ball thrust bearing, for connecting said sleeve to said element for axial movement therewith and substantially frictionless rotary movement relative thereto, yieldable means for normally holding said element in a predetermined axial position, and fluid pressure operated means for moving said element axially against the efforts of said yieldable means, said fluid pressure operated means comprising a plurality of cylinders equally spaced around said element and a piston reciprocably mounted in each of said cylinders and operatively associated with said element.

2,449,808
BRASSIÈRE
Jack Glick, Bronx, N. Y., assignor to The Gluckin Corporation, New York, N. Y., a corporation of New York
Application April 3, 1946, Serial No. 659,334
3 Claims. (Cl. 2—42)

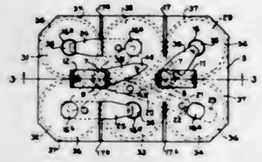
1. In brassières having front breast pocket portions, wide bands extending from the ends of the pocket portions to the sides and back of the garment, shoulder straps joining the bands with the upper central portions of the pockets, end portions of the bands having upper and lower corners, a pair of substantially V-shaped strap members attached to the upper and lower corners of said bands and converging outwardly with respect to said band ends, said strap members having contracted free ends, a plurality of fastener devices attached to the central portion of each of said bands at longitudinally spaced intervals, and companion fastening devices on the contracted ends of said strap members adapted for engagement with the fasteners of said bands in adjustably coupling the strap members therewith.



2,449,809
CORRUGATED DISK FILTER
Maurice A. Goldman, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a corporation of New Jersey
Original application January 12, 1939, Serial No. 250,666. Divided and this application October 24, 1942, Serial No. 463,159
3 Claims. (Cl. 210—169)

3. Apparatus for removing solids from liquids comprising in combination a chamber having an

inlet, an outlet, and a plurality of spaced pervious screens arranged in series within said chamber and each fitted to the wall of the container and obstructing passage between the inlet and outlet, each of said screens being formed of material adapted to prevent the passage of solids through it and having passages permitting the flow of liquids only through it and each of the screens, except the last in the direction of flow of liquid being provided with one or more additional openings larger than said liquid passages permitting the passage of liquids and solids whereby liquid in passing through said chamber passes through a plurality of said screens and in so doing, passes through a plurality of said passages and a plurality of said openings simultaneously, the total area of said openings, in each screen having such openings, decreasing progressively from screen to screen in the direction of flow through said chamber.



2,449,810
DEVICE FOR DECORATING MATERIALS
Frank S. Guenther, Trenton, N. J.
Application August 3, 1944, Serial No. 547,888
5 Claims. (Cl. 33—184.6)

3. A device for use in decorating material comprising a base having a surface thereon for supporting an article to be decorated, means extending longitudinally of said base adjacent opposite edges thereof and formed with notches therein, identifying means associated with each of said notched means, a guide member extending transversely of said base and having parts thereon engageable with the notches in said means to hold the guide member in any one of a plurality of predetermined positions, said guide member having notches in an edge thereof for receiving and guiding a marking member in forming a mark on the article to be decorated, identifying means associated with said notches, a pattern card bearing indicia corresponding with the indicating means associated with said notched means on the base and on the guide bar to indicate the locations in which the marking member is to be placed to form a predetermined design element on the material to be decorated, means for holding said pattern card, and means located on said holding means for viewing said pattern card.

2,449,811
MULTIVOLTAGE DRY BATTERY
Dwight L. Harford, Downey, Calif., assignor to A. Parley Johnson, Downey, Calif.
Application August 28, 1943, Serial No. 500,311
3 Claims. (Cl. 136—173)

1. In a dry cell battery, a receptacle, a plurality of upright and inverted dry cells alternately arranged within said receptacle, a plurality of conducting members on said receptacle for connecting said cells in series, a pair of terminals on said receptacle, a conducting member on said receptacle for connecting one of said terminals with the center electrode of the first cell in said series, a switch arm rotatably mounted on said receptacle for selectively connecting the casing of any one of the inverted cells with the other of said terminals and movable to an "off" position, and a second switch arm rotat-

ably mounted on said receptacle for selectively connecting the casing of certain of said upright cells with said other terminal and movable to an "off" position independently of said first-named switch arm, said switch arms being separately employed for placing in circuit any desired number greater than one of said plurality of cells.

2,449,812
WATER-SOLUBLE COATING COMPOSITION FOR PAPER
Laurence R. B. Hervey, Concord, and Alvin C. Whitaker, Boston, Mass., assignors to the United States of America as represented by the Secretary of War
No Drawing. Application August 27, 1945, Serial No. 613,012
1 Claim. (Cl. 260—29.6)

A coating composition for paper comprising:

	Parts by weight
Polyvinyl acohol	75
Ethyl alcohol	300
Water	300
Titanium dioxide	90
Sorbitol lactate	64

2,449,813
SAFETY LOWERING DEVICE FOR USE AS A FIRE ESCAPE
Anna Lawson, Detroit, Mich.
Application March 12, 1947, Serial No. 734,129
1 Claim. (Cl. 244—24)

A device of the character described comprising a tank filled with light gas under pressure, a valve fitting on the top of the tank, two operating levers pivoted to the valve fitting to open and close the same, a bag connected by a tube with the valve fitting and adapted to be filled with the light gas as the same is delivered through the tube to the bag, lock means for connecting the valve levers together to maintain the valve closed, trip means for releasing the lock means and the levers whereby the levers may assume a position to open the valves, shroud lines connected between the valve levers and the bag whereby the valve levers will be pulled upwardly to their closed positions when the bag has been inflated and weight is transmitted to the bag, and a harness for attaching the tank to the body of the person who is to effect an escape.

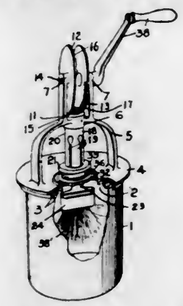
2,449,814
SAW SET
Joseph W. Melanson, Toronto, Ontario, Canada
Application February 28, 1947, Serial No. 731,561
In Canada April 6, 1946
2 Claims. (Cl. 76—69)

2. A saw set comprising a handle having a pair of spaced parallel extensions, jaw portions extending parallelly from said extensions and spaced to receive the blade of a saw therebetween, guide openings extending through said spaced extensions and ranged in alignment transversely across the opening between said jaw portions, an anvil block slidably mounted in said guide openings having a notch intermediate its length adapted to receive the tooth of the saw inserted between the jaw portions and formed with a bevelled anvil surface to engage and bend the tooth, a handle pivoted to one of said extensions and operatively engaging said anvil block to slide same longitudinally in said guide openings, and means for gauging the movement of the pivotal handle.

2,449,815
RESOLUTION OF AZEOTROPIC MIXTURES OF CHLOROSILANES
Arthur E. Newkirk, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 23, 1946, Serial No. 671,913
3 Claims. (Cl. 260—448.2)

1. The method of resolving an azeotropic mixture of trimethylchlorosilane and tetrachlorosilane which comprises treating said mixture with zinc fluoride to convert the trimethylchlorosilane to trimethylfluorosilane, and separating trimethylfluorosilane from the treated mixture by distillation.

2,449,816
PLASTIC MATERIAL FROM ALLYL STARCH
Peter L. Nichols, Jr., and Robert M. Hamilton, Philadelphia, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application January 20, 1944, Serial No. 518,977
11 Claims. (Cl. 260—17.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

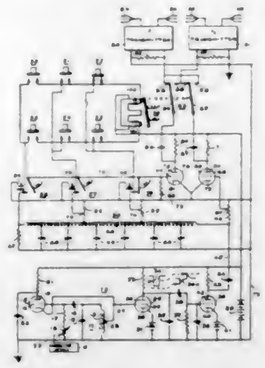


1. A plastic material comprising organic solvent-soluble allyl starch compounded and cured with sulfur.

2,449,817
DEVICE FOR SIGNALING OR RELEASING BY ELECTRIC POWER CAPACITORS
Robert Nordell, Sundbyberg, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a company of Sweden
Application March 30, 1944, Serial No. 528,758
In Sweden March 9, 1943
2 Claims. (Cl. 175—294)

1. In an electric power transmission system for alternating current, an electric power capacitor for each phase, said capacitor including a number of partial capacitors all connected in series, and a reactance coil connected in parallel with said power capacitor and influenced by the same A. C. voltage, at least some connecting points between the partial capacitors being connected to terminals on the winding of the reactance coil, the potential of each of said terminals corresponding to the potential of the connecting point between two partial capacitors, to which the terminal is connected, signaling means in at least one connecting wire between the reactance coil and the power capacitor operated by current arising by a short-circuit in anyone of the said partial capacitors.

2,449,818
BRUSH CLEANING DEVICE
Arnold O. Olsen, Brooklyn, N. Y.
Application December 26, 1942, Serial No. 470,135
10 Claims. (Cl. 134—143)

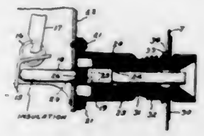


7. In a device for paint cans to clean brushes therein, a base having means depending therefrom to engage the tops of cans of various sizes, a chuck for engaging the handle of a brush which projects above the top of a can, revolving means mounted on said base for revolving said chuck and brush held therein, said chuck having its lower end below the top of said can and its upper end above the top of said can.

2,449,819
MULTIPLEX RADIO COMMUNICATION
Ellison S. Purington, Gloucester, Mass., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application May 29, 1944, Serial No. 537,799
21 Claims. (Cl. 250—9)

1. The method of signalling which comprises propagating a pair of radiant energy pulses over

different communication channels at predetermined spaced time intervals, selecting the time period between said pulses and selecting the pulse sequence for signalling, receiving said pulses



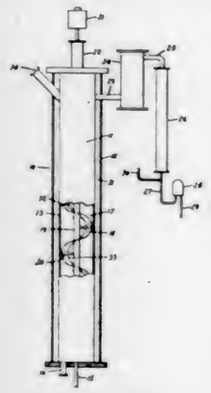
at a remote point, selecting the received pulses in accordance with their timing and sequence, and utilizing the selected received pulses for signal reception.

2,449,820

TRIPPING AND INTERLOCKING DEVICE FOR CIRCUIT BREAKERS

Joseph W. Seaman, Kennett Square, Pa., assignor to General Electric Company, a corporation of New York

Application March 7, 1946, Serial No. 652,602
10 Claims. (Cl. 200—50)



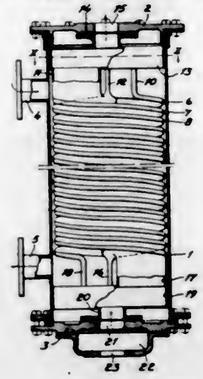
1. In a tripping and interlocking device for a circuit breaker provided with a tripping member and inaccessibly mounted behind a barrier movable from a shielding position to give access to the circuit breaker, means arranged to cause a tripping actuation of the tripping member before an access movement of the barrier can be effected comprising a support adapted to be mounted between the tripping member and the barrier and independently of the barrier, a guide positioned on said support for a limited movement relatively thereto in a predetermined direction to effect a tripping actuation of the circuit breaker tripping member, relatively strong means biasing said guide for movement in said predetermined direction, a tripping element mounted on said guide for a limited movement relatively thereto and movable therewith in said predetermined direction to actuate the tripping member of the circuit breaker, relatively weak means biasing said tripping element for movement away from its tripping position, and an operator adapted to be movably mounted on the barrier in a position to engage and move said guide in the opposite direction to the bias of said relatively strong biasing means when said operator is actuated in one direction while the barrier is in the shielding position whereby to effect movement of the tripping element from the tripping position under the action of said relatively weak biasing means and when said operator is actuated in the opposite direction to permit movement of the tripping element to the tripping position under the preponderating action of said relatively strong biasing means and to release the barrier for movement from the shielding position.

2,449,821

METHOD FOR PREPARING ORGANO-SILICON COMPOUNDS

Jesse E. Sellers, Scotia, and John L. Davis, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application December 8, 1945, Serial No. 633,818
1 Claim. (Cl. 260—448.2)



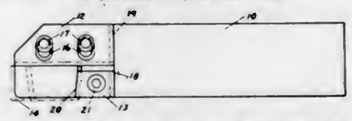
The method of preparing organo halogenosilanes which comprises separately introducing into a vertical reaction chamber (1) an alkyl chloride gas and (2) a finely divided mixture of silicon and a metallic catalyst for the reaction between silicon and an alkyl chloride gas, said alkyl chloride being introduced into said reaction chamber substantially continuously, maintaining the side walls of said chamber at a temperature within the range of about 200° to 500° C., spirally conveying the mixture upwardly through said reaction chamber along a path having an annular area, as viewed from the top of said reaction chamber of from about 60% to 55% of the cross-sectional area of said chamber, said material being moved in close proximity to the inner-side walls of the said chamber whereby the excess heat of the reaction is effectively dissipated to maintain the side wall temperature and the reaction temperature in equilibrium, contacting said upwardly moving mixture with the said alkyl chloride thereby to effect reaction between the said chloride and the silicon component of the mixture, allowing the mixture containing unreacted silicon when its upward travel has ceased to fall downwardly through the central portion of the reaction chamber in contact with the alkyl chloride, withdrawing from the reaction chamber the alkylchlorosilanes produced by the reaction between the said alkyl chloride and the silicon component of the mass, separating the alkylchlorosilanes and the unreacted alkyl chloride from the said mixture and returning the unreacted alkyl chloride to the said reaction chamber for further reaction.

2,449,822

HEAT EXCHANGING APPARATUS

Lauritz Benedictus Schibbye, Essvik, Sweden, assignor to Svenska Cellulosa Aktiebolaget, Stockholm, Sweden, a company of Sweden

Application January 28, 1944, Serial No. 520,090
In Sweden December 11, 1942
1 Claim. (Cl. 257—229)



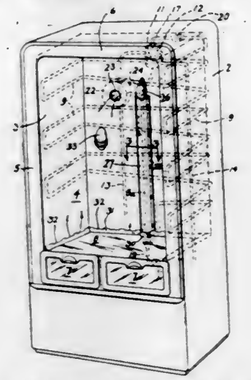
A heat exchanger comprising a substantially cylindrical shell, a plurality of conduits within said shell, each conduit being in the form of a substantially right helicoid and said helicoids being concentric and of equal size and pitch and the turns thereof being equally spaced from each other thereby forming a plurality of helicoidal passageways of substantially uniform cross-sectional shape through said cylindrical shell, the cross-section of each conduit as cut by a plane through the axis of the cylinder being substantially rectangular and the dimension of said cross-section perpendicular to the axis of the cylinder being substantially equal to the radius of the cylindrical shell and at least several times the dimension of the cross-section of the conduit parallel to the axis of the cylindrical shell, means for passing a fluid through said conduits and means for passing another fluid through said passageways.

2,449,823

TOOL BIT AND HOLDER THEREFOR

Henry M. Sheridan, Erie, Pa.

Application June 7, 1945, Serial No. 598,040
4 Claims. (Cl. 29—96)



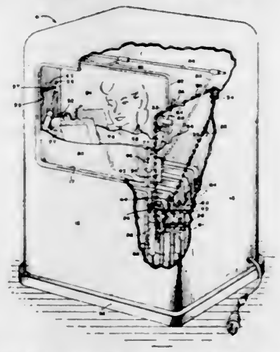
1. In a tool holder, a solid elongated substantially rectangular shank, a seat at one end of said shank having an inner end defined by a transverse shank wall, a bit shoulder formed on said seat and extending in a transverse crosswise direction thereof and spaced outwardly from said transverse shank wall, and a pair of independently mounted and independently secured first and second bit clamps positioned on said seat, said first clamps having a straight longitudinal face adapted to engage the side wall of a tool bit and an inner end face engaging said transverse shank wall, said second clamp having an outer end face disposed towards and facing the bit shoulder and an opposite inner end face engaging said transverse shank wall, said seat shoulder and clamps being constructed and arranged to secure a bit between the shoulder and said second clamp and against the longitudinal face of said first clamp.

2,449,824

CONTROLLED HUMIDITY REFRIGERATOR

Malcolm G. Shoemaker, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application February 28, 1945, Serial No. 580,109
10 Claims. (Cl. 62—6)

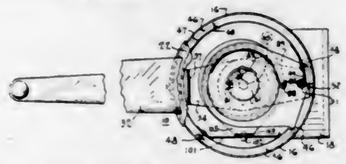


1. In a refrigerator, a storage compartment, evaporator means adapted to maintain wall portions of said compartment at a refrigerating temperature whereby to cool the compartment, evaporator means within said compartment affording a surface maintained at a temperature lower than the temperature at which said wall portions are maintained and upon which surface the deposition of moisture is substantially localized, means normally preventing contact of compartment air with said surface, and humidity-responsive means for effecting intermittent circulation of the compartment air in heat exchange relation with said surface.

2,449,825

THIRD DIMENSION ANIMATED DISPLAY DEVICE, INCLUDING MOVABLE FRAMES

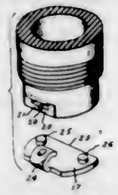
Morris Strauss, Brooklyn, N. Y.



Application November 30, 1945, Serial No. 631,871
5 Claims. (Cl. 40—36)

1. A display device, comprising a housing or cabinet, having a rear and side walls and a front

wall formed with an observation opening, endless propelling chains mounted upon opposite side walls of said cabinet, channel members or tracks secured to opposite side walls of said cabinet, a plurality of frames carrying display cards and having pintles extending therefrom and adapted to engage in the said channeled tracks, hook members upon the chains to engage the pintles upon said frames, the said frames and display cards being sectional in formation and adapted to separate and move apart when in line with said observation opening to present a "three dimensional" aspect to the observer, means for bringing the separated parts of the display frames back to their normal position after the same have passed the said observation opening, and driving means for operating the parts.

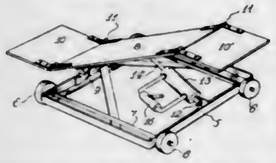


2,449,826
DOOR CHECK AND CLOSER
Rexford C. Van De Boe, Drexel Hill, Pa.
Application April 12, 1946, Serial No. 661,683
7 Claims. (Cl. 16—49)

1. In a door check and closer, a casing including a circular side wall whose inner surface is adapted to function as a brake drum, a shaft extending axially of said drum, means securing said shaft against rotation relative to said drum, a brake band within said casing and adapted to frictionally engage said drum, means normally urging said brake band into frictional engagement with said drum, means for rotating said brake band relative to said drum in one direction upon opening of a door with which said check and closer is associated, and a coil spring having one end secured to the shaft and the other end operatively associated with said last-mentioned means, whereby said spring is tensioned upon opening of the door and whereby said tensioned spring operates through said last-mentioned means to close the door and to rotate the brake band relative to the drum in the opposite direction, said last-mentioned means including means for reducing the normal frictional engagement of the brake band with the drum during opening of the door and for increasing said normal frictional engagement during closing of the door.

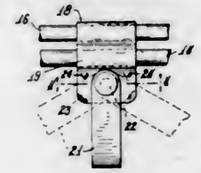
2,449,827
RENEWABLE FUSE
Fred G. von Hoorn, Nichols, Conn., assignor to General Electric Company, a corporation of New York
Application August 27, 1947, Serial No. 770,823
1 Claim. (Cl. 200—131)

In a refillable fuse member having an insulating casing, a metallic open ended bushing at one end of the casing, a cover plate partly closing the open end of the bushing and adapted to have one end of a fuse link bent to lie along the outer surface of said plate and an end cap detachably secured to said bushing and adapted when tight to clamp the fuse link against said plate; the combination therewith of a hinge for said cover plate comprising a tang extending from one edge of said plate, said tang being bent toward the inner surface of the plate into an eye adapted to engage a hinge pin, the end of said bushing having a T-slot in its periphery with the stem of the T extending to the end of the bushing forming opposed



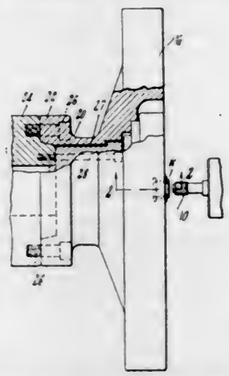
tongues, said tongues being bent inwards and flattened and being thereby adapted together to form a hinge pin at the end of the bushing for receiving said eye.

2,449,828
POLYLACTYLIC ACID RESINS AND PROCESS FOR MAKING THEM
Paul D. Watson, Arlington, Va., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Original application May 27, 1944, Serial No. 537,663. Divided and this application June 8, 1945, Serial No. 598,359
6 Claims. (Cl. 260—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



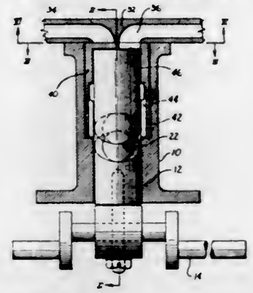
1. A process for preparing a resinous material comprising heating at polymerizing temperatures a mixture of between 35 and 70% polylactylic acids, between 20 and 50% fatty, drying oils, and between 10 and 15% of oil-soluble petropols, said percentages being based on the total weight of the ingredients, said heating being effected under conditions permitting the removal of volatile products of reaction until a viscous, elastic, resinous product is formed.

2,449,829
PORTABLE LOADING RAMP
Carl G. Agren, Roberts, Idaho
Application March 17, 1945, Serial No. 583,271
1 Claim. (Cl. 14—72)



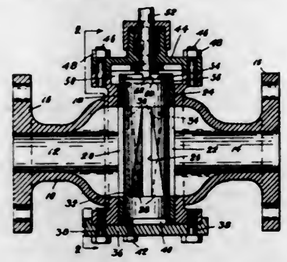
An adjustable portable loading ramp comprising a horizontal rectangular frame, axles extending transversely of said frame adjacent opposite ends thereof, the ends of said axles projecting through and outwardly of the sides of said frame, supporting wheels journaled on the projecting ends of said axle, a flat platform plate hinged near one side edge upon one side of said frame for vertical swinging movement about an axis parallel with and above said one side of the frame, a jack pivoted to the other side of said frame and pivotally connected to the underside of said platform plate for adjusting the latter from a horizontal position to different lateral inclinations relative to the frame, said platform plate being of such a width and so arranged as to project beyond opposite sides of said frame when in the horizontal position, the hinged side of said platform extending beyond and between the wheels at the adjacent side of the frame when said platform plate is disposed at an inclination, and a flat approach plate hinged to each side edge of the platform plate to fold onto or assume different angular positions relative to the latter.

2,449,830
ROD CLIP
Robert M. Albert, Chicago, Ill.
Application March 1, 1946, Serial No. 651,067
3 Claims. (Cl. 24—81)



3. A clamp for binding two rods laid side by side against relative sliding movement comprising a strip of shape-retaining material formed substantially U-shape with its leg portions embracing said rods, cam surfaces on the ends of said leg portions, a bifurcated lever pivotally connected to both leg portions, said lever being selectively movable into engagement with said cam surfaces to compress the clamp portions tightly about the rods, and stops on said leg portions to limit pivotal movement of said lever.

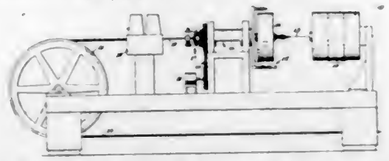
2,449,831
CHUCK
Merton H. Arms and Leon J. Barnard, Springfield, Vt., assignors to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont
Application April 17, 1945, Serial No. 588,784
5 Claims. (Cl. 51—237)



1. Apparatus of the class described comprising a rotary work spindle shaft, chuck mechanism including means for accurately centering the work, and a heavy disk having a relatively thin neck portion securing said disk coaxially to said shaft and supporting said chuck, said disk providing large rotational inertia to said mechanism and said neck portion providing a connection capable of flexing when said mechanism is rotated above critical speed.

2,449,832
PUMP
Howard S. Bancroft, Sharon, Pa.
Application March 7, 1946, Serial No. 652,634
6 Claims. (Cl. 103—157)

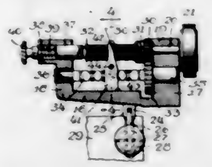
1. Apparatus of the type described including a cylinder, a piston slidably received in the cylinder, a crankshaft having an extra wide connecting rod bearing, a block slidably and rotatably carried on the bearing, a pin rigidly secured to the piston and rotatably secured to the block, cam and cam way means between the piston and cylinder for rotating the piston when the piston is reciprocated by the crank shaft, a head on the cylinder having intake and exhaust ports therein, a cup supported between the head and cylinder for rotary but non-axial movement, the inside of the cup forming a continuation of the bore of the cylinder and slidably receiving the head end of the piston, a spline and key connection between the piston and cup whereby rotation of the piston effects rotation of the cup, said cup having a port in its end and alternately registering with the intake and exhaust ports in timed relation with the reciprocation of the piston.



2,449,833
VALVE
Julius L. Barnes, Allston, Mass.
Application September 11, 1945, Serial No. 615,523
6 Claims. (Cl. 251—92)

4. In a fluid flow-control mechanism, a cylindrical sleeve having a relatively long and narrow rectangular slot opening through each of opposite wall portions of the sleeve, the length dimension of said slots being disposed along the sleeve at an angle to the axis of the sleeve, and the two slots being in registering alignment, a rotatable element nicely fitting the interior of the sleeve and having a slot therethrough generally of the shape and size of the slots in said sleeve and having its length dimension disposed along the axis of the element, said slot in said element having a flared generally V-shaped mouth at one side of the element and a flared

generally inverted V-shaped mouth at the other side of the element, and the angular disposition of said sleeve slots corresponding approximately with the angle of a side of a said V-shaped and inverted V-shaped mouth at opposite sides of the rotatable element.

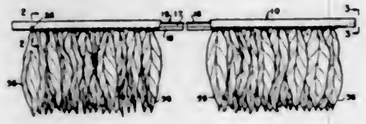


2,449,834
WIRE COVERING MACHINE, METHOD, AND PRODUCT
Charles W. Bechle and John W. Olson, Sycamore, Ill., assignors to Anaconda Wire and Cable Company, a corporation of Delaware
Application May 9, 1946, Serial No. 668,594
16 Claims. (Cl. 57—18)

1. A forming head adapted to form a tube of paper provided concentrically about and spaced radially from a wire into a plurality of loops disposed radially about the axis of the wire comprising a base member having a central opening adapted to permit passage of the tube and wire therethrough, and a plurality of pressure elements mounted on the base member at spaced intervals circumferentially about the tube so arranged as to press against peripherally spaced portions of the tube and transform the periphery of the tube into the shape of a plurality of loops

---

2,449,835
SEWING MACHINE BOBBIN WINDER
Clarence S. Best, Belvidere, Ill., assignor to National Sewing Machine Company, Belvidere, Ill., a corporation of Illinois
Application June 18, 1945, Serial No. 600,128
3 Claims. (Cl. 242—20)



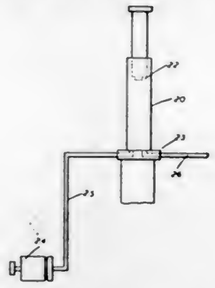
1. In a sewing machine provided with an upright standard and a rotatable fly wheel, a bobbin winder comprising a rigid bracket having a rearwardly extending arm pivotally connected to said standard in juxtaposition to said fly wheel, a link pivotally connected at one end to said bracket, a manually actuated member mounted for limited movement in a fixed part of the standard, said manually actuated member being pivotally connected to the opposite end of the link, spool holding means rotatably mounted in the bracket, a shaft mounted in the bracket in axial alignment with the spool holding means and connected thereto for rotating said means, a pulley on said shaft, manipulation of said manually actuated member serving to move said pulley into and out of engagement with said fly wheel, a distributor shaft mounted in the bracket parallel with the spool holding means, a thread distributor arm mounted on the distributor shaft, co-

operating means on the arm and shaft for causing the arm to move longitudinally of the shaft when the shaft is rotated, and means on the distributor shaft operatively connected with the shaft which rotates the spool holding means for rotating the distributor shaft in timed relation to the rotation of the spool holding means.

2,449,836
PHOTOGRAPHIC SILVER HALIDE EMULSIONS
Ralph Kingsley Blake, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 4, 1945, Serial No. 592,057
8 Claims. (Cl. 95—7)

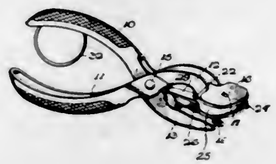
1. A colloid silver bromide emulsion containing from 0.0015 to 0.03 gram of N-alkylaminomonohydroxybenzene having from 1 to 2 carbon atoms in the alkyl radical per 100 grams of silver halide.

2,449,837
TOBACCO STICK
Daniel M. Boone, Lumberton, and Stephen C. Boone, Charlotte, N. C.
Application March 19, 1947, Serial No. 735,722
7 Claims. (Cl. 294—5.5)



1. A stick for supporting tobacco leaves in a tobacco barn for a curing operation comprising a tubular member having a slot along its lower edge and being open at both ends, an inner member disposed within the tubular member and being pivotally supported at one end by the tubular member, the other end of the inner member being pointed to assist in directing the stems of tobacco leaves into the space between the interior of the tubular member and the exterior surface of the inner member, the portions of the tubular member adjacent the free end of the inner member being turned upwardly away from the free end of the inner member to provide space for receiving the stems of tobacco leaves inserted between the inner member and the interior surface of the tubular member.

2,449,838
VALVE SUITABLE FOR USE WITH CATHODE-RAY TUBES AND FOR OTHER PURPOSES
George Noel Brett and Ernest Alfred Smith, Gravesend, England, assignors to W. T. Henley's Telegraph Works Company Limited, London, England, a British company
Application December 19, 1946, Serial No. 717,238
In Great Britain February 21, 1946
2 Claims. (Cl. 250—27.5)



1. A cold cathode electronic discharge device comprising a discharge chamber, a valve for controlling the rate of leakage of air direct from the atmosphere into said discharge chamber, an inlet for said valve open to the atmosphere and an outlet for said valve connected to said discharge chamber, said valve comprising a rigid plate member, having a central aperture and a long narrow groove in one face going in a spiral path from the aperture outwards, in combination with a disc of

rubber having a plain face and means for pressing adjustably the plain face of the disc against the

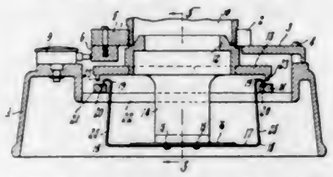
grooved face of the plate member to control the flow of air through the groove.

2,449,839
BALSA PUNCH
David F. Brittle, Weaverville, N. C.
Application August 13, 1946, Serial No. 690,090
3 Claims. (Cl. 164—121)

1. A punch tool comprising a pair of cross-pivoted handles, a jaw carried by the forward extremity of one handle, a punch pin secured to the jaw, a second jaw carried by the forward extremity of the other handle, the second jaw being in the form of a flat plate having a width materially greater than the width of the handles and of the first jaw, an intermediate jaw of substantially the same width as the second jaw, said intermediate jaw having a relatively long tail piece extended rearwardly and pivotally connected with the handles to turn on the pivotal center for the handles, the second and intermediate jaws having aligned openings to receive the punch pin, a rivet secured at one end to the first jaw at a point rearwardly from the punch pin, the second and intermediate jaws having aligned openings through which the rivet loosely extends, means upon the other end of the rivet for limiting the separatory movement of the first and second jaws, and a spring encircling the rivet and interposed between the first jaw and the intermediate jaw.

2,449,840
APPARATUS FOR MANUFACTURING FINNED TUBES
John W. Brown, Jr., Lakewood, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio
Original application April 2, 1941, Serial No. 386,503. Divided and this application July 13, 1944, Serial No. 544,713
2 Claims. (Cl. 219—4)

1. An apparatus for making finned tubes comprising in combination, means for guiding a tube and a pair of oppositely disposed channel members in engagement with the exterior of the tube through the apparatus, said guiding means including rolls engaging said tube throughout a substantial portion of the circumference thereof and

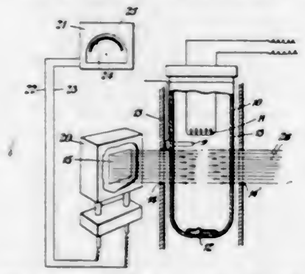


rolls engaging within said channel members, means for advancing said tube and channels through the apparatus, and means for electrically welding said channel to said tube.

2,449,841
APPARATUS FOR WASHING OVER, RELEASING, AND WITHDRAWING TUBULAR STRUCTURES FROM WELLS
Robbins M. Claypool, Bellaire, and David M. Best, Houston, Tex.
Application March 6, 1947, Serial No. 732,860
18 Claims. (Cl. 166—1)

1. A string of tubing for use in wells comprising a wash pipe having a substantially flush inner surface, a line of tubing having a substantially flush outer surface, the inner diameter of said wash pipe being greater than the outer diameter of said line of tubing, said wash pipe being longer axially than said line of tubing, a screw-through joint connecting said wash pipe to said line of tubing, said screw-through joint comprising an outer, internally threaded tubular member connected to said wash pipe and an inner, externally threaded member connected to said line of tubing and in threaded engagement with said outer member, cutting teeth on the lower end of said outer member, a plastic packing seal releasably joining said outer and inner members, the outer diameter of said inner member and the inner diameter of said outer member being greater than the outer diameter of said line of tubing and less than the inner diameter of said wash pipe, and a tubular release joint connected to the lower end of said line of tubing, said release joint having an external thread adapted to receive the internal thread of said outer tubular member and a radially outwardly extending shoulder below said external thread, said release joint also having a lower threaded end, the direction of the thread of said lower threaded end being opposite to the other said threads.

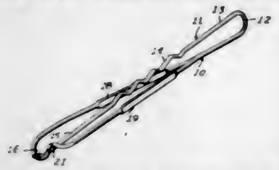
2,449,842
WORK GAUGE
Elton S. Cornell, Charlestown, N. H., assignor to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont
Application October 6, 1943, Serial No. 505,170
4 Claims. (Cl. 33—178)



2. A gage comprising a bed, a plurality of gaging anvils carried by said bed and relatively movable to gage and release a work piece, at least one of said anvils being stationary with respect to said bed, a support for an article to be gaged, and means on said bed carrying said support with capability of swinging motion to carry an article thereon to and from gaging relation to said fixed anvil, said support being yieldable transverse to its direction of motion toward and from gaging relation to said fixed anvil.

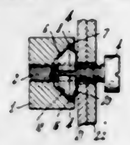
2,449,843
NITRATION PRODUCT OF A HYDROXY AMIDE
William Frederick Filbert, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 20, 1948, Serial No. 9,959
1 Claim. (Cl. 260—467)

As a new chemical compound, N-nitro-N-methyl hydroxyacetamide nitrate.



2,449,844
QUARTZ OSCILLATOR PLATE
Clifford Frondel, Flushing, N. Y., assignor to Reeves-Ely Laboratories, Inc., New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,330
18 Claims. (Cl. 171—327)

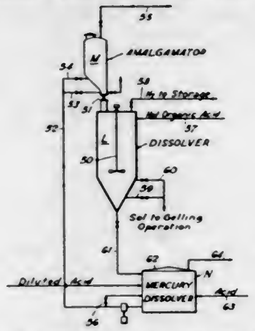
18. The method of increasing the frequency of oscillation of a piezoelectric oscillator comprising treating such oscillator with ultra-violet light rays in the range from 1850 angstroms to 4000 angstroms.



2,449,845
HAIR CLIP
Franklin C. Ghisletta, Patterson, Calif.
Application February 24, 1947, Serial No. 730,590
2 Claims. (Cl. 132—50)

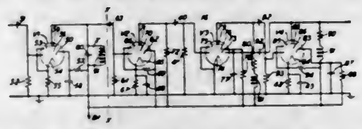
1. A hair clip adapted for holding tresses of hair in order after dressing, comprising a long shank and a long base made of spring wire forming a unit with a connecting head holding said shank and base apart, the shank at its free end terminating in an upturned nose, said base being

divided at approximately midway of its ends into a long two armed loop, and means at the outer end of the two armed loop forming a keeper for engagement by said nose to secure said shank in closed position.



2,449,846
LOCK BOLT OR NUT
David M. Gilman, Chelsea, Mass.
Application June 15, 1946, Serial No. 677,047
8 Claims. (Cl. 151—19)

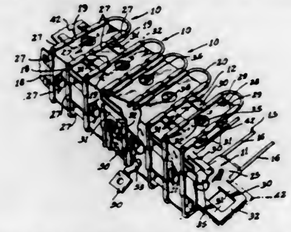
1. In combination, a threaded member adapted to cooperate with a mating threaded member for fastening purposes, one of said members having a recess in one face having oppositely tapered wall portions concentric with the axis of the threads and merging in a maximum diameter portion, and a split spring washer seated in said recess and having tapered faces reversely positioned with respect to the tapered faces of said recess, the maximum diameter portion of said washer when in unstressed condition and with its split ends spaced apart being greater than the face opening of said recess, whereby said washer must be pressed toward split end closed condition to be inserted into said recess and after being so inserted and freed from pressure is retained therein, said washer projecting outwardly beyond said member to be engaged by work secured by said member and said cooperating threaded member and forced inwardly and with its split ends forced toward each other as said members are tightened against the work.



2,449,847
MANUFACTURING ALUMINA GEL FROM AMALGAMATED ALUMINUM
Llewellyn Heard, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 21, 1945, Serial No. 579,123
6 Claims. (Cl. 252—317)

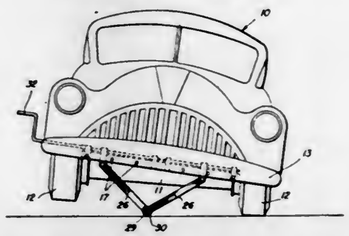
1. In the process of making an alumina sol from amalgamated metallic aluminum in a form in which the ratio of surface to volume is about the same as in sheet aluminum, by the action of a dilute weak acid capable of forming a sol with said amalgamated aluminum, the improvement comprising charging said aluminum to a reaction zone and amalgamating it therein by flooding with a solution of a mercury salt, withdrawing said mercury salt solution, flooding the resulting amalgamated aluminum with dilute weak acid, retaining said acid in contact with said aluminum until substantially no further solution of metal takes place and a substantially saturated alumina sol is produced, said metal being only partially dissolved in the operation, withdrawing said alumina sol from the amalgamated aluminum metal, again flooding said mass of

amalgamated aluminum metal with an additional quantity of weak acid and producing a further quantity of substantially saturated alumina sol without reamalgamation of said aluminum metal, said aluminum metal being maintained in an oxygen-free atmosphere thruout the operation of repeatedly withdrawing alumina sol and flooding with weak acid.



2,449,848
PULSE-ACTUATED CIRCUIT
John R. Hefele, Yonkers, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 12, 1943, Serial No. 498,322
15 Claims. (Cl. 315—22)

3. In combination, means for generating a series of pulses, the frequency of repetition of which varies from time to time, the duration of each pulse in the series being only a small fraction of the time interval between successive pulses in the series, means responsive to each pulse in the series for generating a series of oscillations which diminish in aplitude at such a rate that the oscillations die out before the time of occurrence of the next pulse in the series at a fixed frequency which is much higher than the repetition rate of the pulses in said series, and means responsive to said oscillations for producing a series of equally-spaced sharp pulses, one pulse for each oscillation cycle, each of said sharp pulses having a much shorter duration than a half of each of said oscillations.

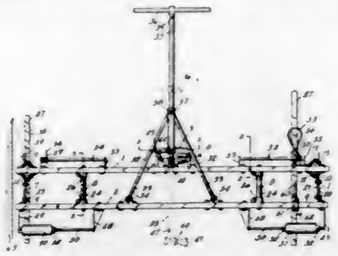


2,449,849
LOCKING MEANS FOR FLEXIBLE CHUTES
Robert E. Holmes, Los Angeles, Calif., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware
Application June 12, 1945, Serial No. 599,111
13 Claims. (Cl. 193—25)

2. In a flexible feed chute, the combination of: a plurality of transverse units disposed side by side to outline a member-guiding passage; an interlinkage means for interconnecting said transverse units for limited movement in a direction toward and away from each other, and at a plurality of positions around the periphery of said passage, said interlinkage means including a hook means on each transverse unit and a link means on each transverse unit engageable with and movable relative to said hook means of an

adjacent transverse unit, there being an opening in each transverse unit adjacent and giving access to said hook means thereof; and means detachably connected to one of two adjacent transverse units for restricting relative movement between these adjacent transverse units in at least one peripheral position, said means including means extensible through said opening into the path of movement of said link means relative to said hook means to impede such movement.

2,449,850
AUTOMOBILE JACK
Alwin P. Huhle, Elmont, N. Y.
Application February 9, 1946, Serial No. 646,613
3 Claims. (Cl. 254—86)

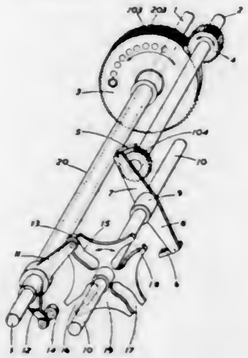


1. A jack comprising a beam, separate axially aligned screws supported on the beam for independent rotation, a nut operatively connected to each screw and mounted to move longitudinally of the beam as its respective screw is turned, means selectively to rotate the screws, a lever arm pivoted to each nut and a pivot joining the lever arms whereby when one or the other of the nuts is advanced along the beam the lever arms will be moved away from the beam.

2,449,851
CONCRETE PLACEMENT MACHINE
Corwill Jackson, Ludington, Mich., assignor to Jackson Vibrators, Inc., Ludington, Mich., a corporation of Michigan
Application February 1, 1946, Serial No. 644,921
15 Claims. (Cl. 94—45)

8. In a concrete placement machine, the combination of a vibratory member adapted to support forwardly thereof a substantial mass of concrete as it is advanced against the same, a screed member disposed rearwardly of said vibratory member, vibration absorbing connections be-

tween said vibratory and screed members whereby they are connected for manipulation as a unit, means for vibrating said vibratory member, a handle projecting forwardly of said vibratory member, and rollers mounted at the rear of said screed member on which the machine may be



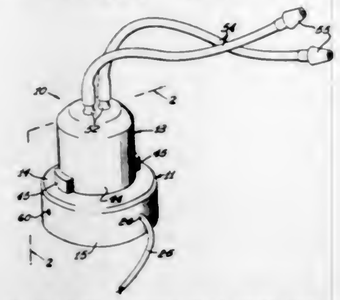
tilted to lift the vibratory and screed members from operative relation to work and for translation of the machine on the rollers when the handle is lifted, the rollers being normally elevated when the vibratory and screed members are in operative relation to work.

2,449,852

GEAR DRIVE FOR PRINTING AND OTHER MACHINES

Kenneth Warner Jones, Enfield, England, assignor to K. Warner-Jones and Company Limited, London, England

Application August 3, 1944, Serial No. 547,887
In Great Britain August 16, 1943
3 Claims. (Cl. 74—435)



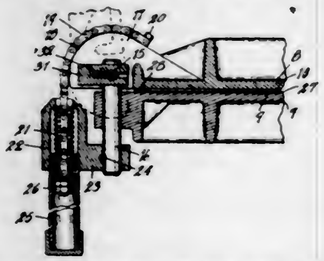
1. In gearing for driving intermittently a part of a machine, the combination with a driven gear intermittently rotated by a mutilated driving gear continuously rotated by the power input of the machine, of a pinion fast with said driven gear, a gear element meshing with said pinion before the disengagement of the mutilated gear from the driven gear and disengaging from said pinion before the driven gear is re-engaged with said mutilated gear, and interruptible driving mechanism between the power input of the machine and said gear element to drive the latter intermittently and at varying speed to decelerate such pinion and thus the driven gear after the mutilated driving gear has disengaged from the latter and thereafter to stop said pinion and driven gear, hold them stationary, re-start them, and accelerate their peripheral speed into synchronism with that of the mutilated driving gear and bring the teeth of the driven gear into meshing relation with those of the driving gear before it is re-engaged by the said latter gear.

2,449,853

INHALER

George Karp, Los Angeles, Calif.

Application August 5, 1947, Serial No. 766,379
4 Claims. (Cl. 128—198)



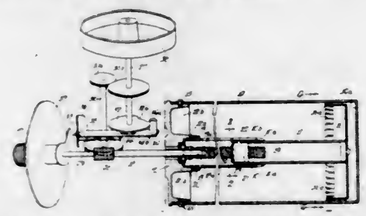
1. An inhaler comprising a base having an annular flange projecting upwardly from the top surface thereof, a lamp socket mounted on said base within said flange, a heating lamp disposed within said socket, a reservoir member attached to said flange and enclosing said lamp, said reservoir member having an annular cavity formed in the top end thereof to receive medicinal material, said cavity encircling the top end of said lamp in close proximity thereto, a cover enclosing said reservoir member, and conduit means communicating with the interior of said cover for conveying the vapor from said material to the nostrils of the patient, said base and said reservoir member having passages formed therein to permit air to be drawn into said reservoir member and thence into the space enclosed by said cover.

2,449,854

CASTING MACHINE

Edward C. Krueger, Otsego, Mich., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich., a corporation of Michigan

Application April 12, 1946, Serial No. 661,677
5 Claims. (Cl. 22—2)



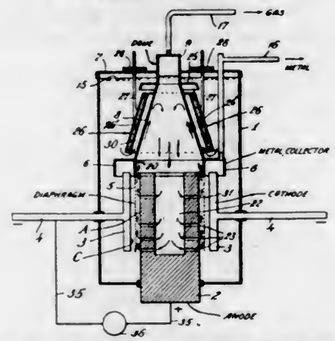
1. In a casting machine, the combination of a frame provided with opposed horizontal ways, a flat faced bed mold member provided with way engaging journals by which it is slidably and swingably supported, arms on said mold bed member projecting downwardly from its said journals, links connecting said arms to said frame so that the mold bed member is swung from horizontal upright position and vice versa as it is reciprocated on said ways, a top mold member, supporting posts for said top mold member freely and slidably mounted on said bed mold member at the rear thereof, a pivot rod on the upper ends of said posts, said top mold member being provided with pivot members engaging said rod and constituting counterbalance levers and having curved surfaces, brackets provided with spring housings mounted on the lower ends of said posts, counterbalancing springs for said top mold member arranged in said housings, and cables connected at one end to said counterbalance levers to wrap upon their said curved surfaces, the other ends of said cables being engaged with said counterbalancing springs.

2,449,855

LONGITUDINAL ACTUATING APPARATUS

Richard C. Marholz, Chicago, Ill., assignor to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois

Application April 28, 1945, Serial No. 590,891
8 Claims. (Cl. 74—441)



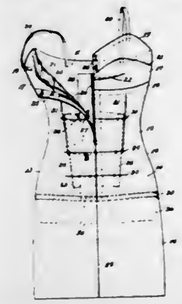
1. Apparatus for longitudinally actuating a driven member comprising, a rotatable actuating means, a lead-screw driven by said actuating means, a longitudinal guide adjacent said lead-screw having parallel opposed faces, a driven member having a follower engaging said lead-screw and a mechanism including a pair of relatively movable arms engaging said guide, and means for biasing said arms into engagement with the opposed faces of said guide substantially to eliminate back-lash between said actuating means and said driven member.

2,449,856

APPARATUS FOR REGULATING THE TRANSFER OF HEAT IN FUSED BATH ELECTROLYTIC CELLS

Robert J. McNitt, Perth Amboy, N. J.

Application July 11, 1941, Serial No. 401,891
4 Claims. (Cl. 204—247)



1. A cell for the electrolysis of fused salt baths which comprises a cathode surrounding an anode, a diaphragm between the active surfaces of the cathode and the anode, a dome to receive collected gas, a partition above the diaphragm extending to the dome, an upper anode compartment above the active anode surface, within the partition and beneath the dome, a portion of the bath in the cell being outside the partition, said anode having a central opening therein connected with the upper anode compartment and having a plurality of openings connecting the central opening with the space between the diaphragm and the anode, a duct in heat-exchange contact with the bath in the upper anode compartment, and means for circulating a fluid in the duct to exchange heat with the bath in the anode compartment, whereby the temperature of the bath in the upper anode compartment may be controlled by adding or removing heat therefrom and the temperature of the bath returning to the central opening of the anode is controlled to maintain the active anode surface at normal activity.

2,449,857

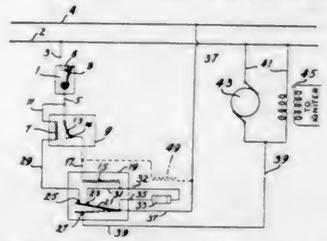
COMBINATION UNDERGARMENT

Ermaline G. Neuhoff and Belle Fay Davenport, Los Angeles, Calif.

Application August 28, 1945, Serial No. 613,114
2 Claims. (Cl. 2—29)

1. In a combination garment, a girdle portion and a skirt portion substantially inelastic in girth, said skirt portion being a continuation of the girdle portion in combination with an underband adapted to encircle the fleshy portions of the thighs and hips, stitching connecting the upper edge of said underband to the skirt portion at substantially the area of greatest girth of said fleshy portions, said band comprising a major portion of substantially inelastic material and a shorter elastic insert at substantially the front of said underband, an inelastic seam connecting the upper edge of said band to the garment, and the girth of the lower edge of the band being smaller than said upper edge to engage said fleshy portions below the area of greatest girth.

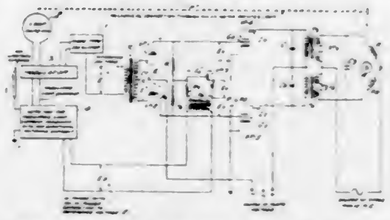
2,449,858



BURNER SAFETY CONTROL SYSTEM

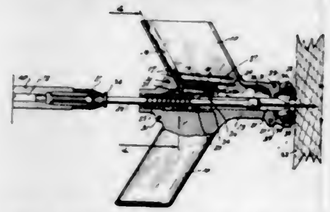
Jerome Ottmar, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts

Application April 21, 1945, Serial No. 589,567
2 Claims. (Cl. 158—28)



1. A burner control system comprising electrically actuated means for controlling the operation of a burner, an electrical igniter for the burner, said means and said igniter being connected in a power circuit under control of a ther-

mostatic time-delay relay, said relay comprising a heater and contactor means movable in response to energization of the heater from a normal first position wherein said contactor means opens said power circuit to a second position wherein it closes said power circuit, a control circuit including said heater, a main control switch, and a safety switch in series, said contactor means including first contacts in said control circuit and closed by said contactor means when in its first position, a normally non-conductive flame-sensitive current controller adapted to become conductive in response to ignition of the burner, a circuit shunting said first contacts and including said controller, said controller being adapted when

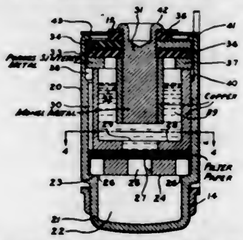


conductive to complete said control circuit through said main control switch, safety switch and heater independently of said contactor means, whereby said heater remains energized to hold said contactor means in its power-circuit-closing second position during operation of the burner, and a circuit including a heater for said safety switch and second contacts which are closed when the contactor means is in its first position, otherwise being open, said safety switch being adapted to open and break said control circuit when its heater is energized a predetermined number of times upon a predetermined number of operations of the relay without ignition of the burner.

2,449,859
AUTOMATIC RADIO COMPASS
Hilliard F. Penfold, Flushing, and Joseph P. Della Corte, Forest Hills, N. Y., assignors to Fairchild Camera and Instrument Corporation, a corporation of Delaware
Application January 27, 1944, Serial No. 519,880
6 Claims. (Cl. 343—117)

1. An automatic loop director for a radio compass, comprising: an alternating current power source; a reversible motor for turning the loop in either direction to place it on course; a motor circuit connecting the motor to the power source, the motor circuit being normally balanced for keeping the motor operatively deenergized; a source of phase-reference voltage separate from said alternating current power source; an intermediate circuit connecting the phase-reference source to the motor circuit, said intermediate circuit being normally balanced for maintaining the balance of the motor circuit; means for deriving a control voltage in phase with the reference voltage when the loop is off course in one direction and in phase opposition to the reference voltage when the loop is off course in the other direction; and means for applying the control voltage to the intermediate circuit for upsetting the balance of the motor circuit in one direction when the control voltage is in phase with the reference voltage and for upsetting the balance of the motor circuit in the other direction when the control voltage is in phase opposition to the reference voltage, whereby the motor is energized for rotation in either direction as required to place the loop on course.

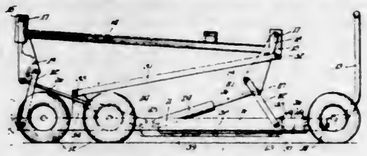
2,449,860
NAIL DRIVING ATTACHMENT FOR PNEUMATIC HAMMERS
Claude D. Raybourn, Denver, Colo.
Application March 20, 1945, Serial No. 583,821
4 Claims. (Cl. 1—46.1)



1. A nail driving attachment for power hammers comprising: a frame member; a horizontal bore in said frame member; a driving rod extending axially of said bore and projecting from the rear of said frame member; a driving head on said rod within said frame member; means for attaching the rearward extremity of said rod to a typical power hammer; a nail feeding chamber above said bore, having a width slightly in excess of a single nail for holding a vertical pile of nails above said bore; head channels in each side of said chamber for receiving the heads of said nails; horizontal head channels in the sides of said chamber at the lower extremity of said head channels for allowing the heads of the nails to move forwardly in said chamber; and a vertical feed channel at the forward extremities of said head channels, allowing the heads of said nails to drop into said bore forwardly of said driving head.

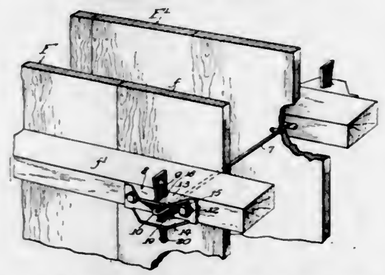
2,449,861
SHOE TREE
William M. Renner, Chicago, Ill., assignor to Mackie-Lovejoy Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 26, 1945, Serial No. 637,232
1 Claim. (Cl. 12—128.1)

A shoe tree comprising a toe engaging member and a resilient strip of metal secured to said toe engaging member and extending rearwardly therefrom, said resilient strip of metal having four portions, the first portion being substantially straight and extending from said toe portion in a direction substantially parallel to the longitudinal axis thereof, the second portion being curved through an arc of substantially 90 degrees, the fourth portion being curved to form a heel engaging portion, and the third portion serving to connect said second and fourth portions and being offset from and disposed substantially parallel to a line tangent to the curves of said second and fourth portions to provide a notched portion for alternatively engaging the sling strap of a sling strap heel type of shoe, or for clearing the upper edge of the heel portion of a conventional type shoe, when said heel portion is engaged by said fourth portion, said first portion being sufficiently long with respect to a shoe of average length as to cause the same to assume a reverse curve.



2,449,862
CENTRIFUGAL CIRCUIT BREAKER
Ernst Walter Rickmeyer, Elmhurst, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application July 20, 1944, Serial No. 545,748
13 Claims. (Cl. 200—80)

1. In a switch of the character described, a tubular shell, transverse partition means dividing the interior of said shell into two chambers, said partition means including a porous material capable of preventing passage of mercury under jolting, etc., incident to handling of the switch, but capable of passing mercury pressed against it at high pressure, means providing a gas vent from one side of said partition means to a point adjacent the remote end of the other chamber, said means comprising a passage along the wall of the shell and a barrier of porous material adjacent to said remote end, said barrier being capable of preventing passage of mercury under jolting, etc. incident to handling of the switch.

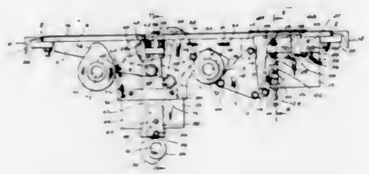


2,449,863
LOAD LIFTING APPLIANCE
William A. Ross, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a corporation of Illinois
Application March 31, 1945, Serial No. 585,929
3 Claims. (Cl. 254—2)

1. In a load-lifting appliance including a vehicle chassis base, a load-carriage and means to raise and lower said carriage with relation to said base, the novel improvement being that said carriage raising-and-lowering means includes in combination a pair of front and rear bell-crank means fulcrumed on the corresponding front and rear portions of said carriage, a pair of independent hydraulic operating-means both hinged on and near the center of the length of said base, one of said hydraulic-means facing forwardly and hinged on said front bell-crank means, and the other hydraulic-means facing rearwardly and hinged on said rear bell-crank means, front links hinged at one end on said base and hinged at

their other end on said front bell-crank means, rear links hinged at one end on said base and at their other end hinged on said rear bell-crank means, and means governing the path of upward and downward travel of an end portion of said carriage.

2,449,864
TIE DEVICE FOR WALL FORMS
Arthur H. Symons, Chicago, Ill.
Application June 24, 1944, Serial No. 541,920
3 Claims. (Cl. 25—131)

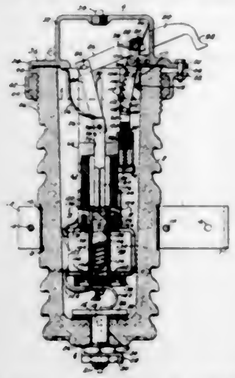


1. The combination with a wall forming form with an opening therethrough, of a combined tie and spreader rod having one end thereof extending through the opening and provided at its extremity and adjacent the outer face of the form with a completely and permanently closed loop, a bracket of U-shaped cross section connected fixedly to the outer face of the form at a point adjacent the opening and embodying a flat intermediate wall fitting against said outer face of the form and provided with a loop receiving opening in alignment with the opening in the form and a pair of opposed laterally spaced outwardly projecting side walls connected to opposite margins of the intermediate wall and provided with aligned transverse slots, and a wedge shaped plate mounted for longitudinal sliding movement in the slots and adapted to have the portion thereof between the side walls of the bracket fit snugly in the loop so as positively to lock the bracket and form against longitudinal displacement in either direction relatively to the rod.

2,449,865
MACHINE FOR FORMING AND APPLYING CLIPS TO WIRE MEMBERS
Edgar Tanguay, Bloomfield, N. J., and Carl Kertesz, Jamaica, and Wallace Krakauer, Rockaway Park, N. Y., assignors to Samuel Krakauer, Rockaway Park, N. Y.
Application October 3, 1946, Serial No. 701,026
5 Claims. (Cl. 140—11)

1. In a machine for forming and applying clips to wire members to connect the same together,

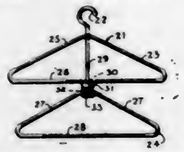
a support providing a surface upon which the wire members are positioned, said support having a passageway providing a guide for a strip of material, an abutment element secured to the upper face of said support to overlie the said wire members, a feed device guidedly mounted on said support for reciprocatory movement longitudinally of the pasageway and having resilient gripping means adapted to engage against said strip of material for feeding the same forwardly with the forward movement of said feed device, a cutting and forming die carried by said support for reciprocatory movement, a rocker arm pivoted to said feed device and fulcrumed intermediate its length for imparting forward movement to the feed block, a ram block mounted on said support for reciprocatory movement toward and away from said cutting and forming die for moving the same into intercepting relation with said strip for severing a clip forming



end portion thereof projecting into overlying relation with said die and for impinging the wire members against said abutment and bending the ends of the severed end portion of the strip against the opposite sides of the wire members, a pair of bending dies pivotally mounted for swinging movement against the bent ends of the severed portion of the said strip for bending the same into overlying clamping relation with the wire members, means normally tensioning said die members respectively for retaining the same in retracted relation, revolving cams respectively engaging said ram block and said pivotally mounted dies for moving the same to effect the severing of the end portion of the strip and the bending thereof about the wire members, and a revolving cam moving in timed relation with the aforesaid cams for swinging the rocker arm to thereby move the feed device forwardly prior to the movement of said cutting and forming dies into engagement with the end portion of the strip.

2,449,866
STREPTOMYCIN AND PROCESS OF PREPARATION
Selman A. Waksman, New Brunswick, and Albert Schatz, Passaic, N. J., assignors to Rutgers Research and Endowment Foundation, a nonprofit corporation of New Jersey
No Drawing. Application February 9, 1945, Serial No. 577,136
13 Claims. (Cl. 260—236.5)

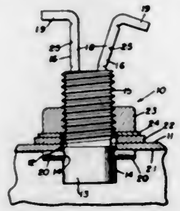
11. A process for the production of streptomycin that comprises growing a culture of a streptomycin-producing strain of *Actinomyces griseus* at a suitable incubation temperature and for a suitable period of cultivation, to form streptomycin in the culture broth, separating the culture broth from the organism growth, adsorbing streptomycin from the broth, and recovering the adsorbed streptomycin.



13. Streptomycin.

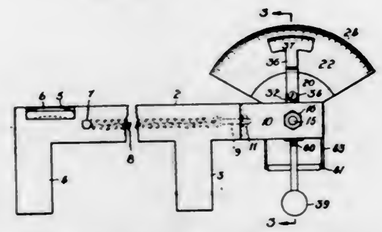
2,449,867
CIRCUIT INTERRUPTER
James M. Wallace, North Braddock, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 12, 1940, Serial No. 345,051
21 Claims. (Cl. 200—89)

21. In a circuit breaker, a container for an arc extinguishing fluid, a chamber adapted to be closed at least during a circuit interrupting operation and at least partially submerged in said fluid, separable contacts in said chamber arranged to be forced apart by fluid pressure in said chamber, means for separating said contacts to draw an arc therebetween, whereby the pressure developed by said arc operates to increase said separation, means biasing said contacts into engagement, fluid time delay means in said container and utilizing said fluid to delay movement of said contacts into engagement, means responsive to a circuit interrupting operation to vent said chamber at a plurality of spaced points, at least one of which is below the level of said fluid and another of which is at a different level, whereby said chamber is flushed out and supplied with a fresh quantity of said fluid after each circuit interrupting operation, irrespective of the viscosity of said fluid.



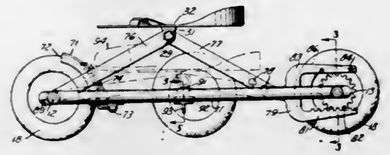
2,449,868
SUIT HANGER
Rose Waldman, Jersey City, N. J.
Application November 27, 1945, Serial No. 631,058
1 Claim. (Cl. 223—88)

In a garment hanger for separately supporting a plurality of garments, said hanger comprising a first substantially triangular garment supporting frame having an aperture formed in the apex thereof, a second substantially triangular garment supporting frame having an aperture formed in the apex and base thereof, said apertures of said first and second triangular garment supporting frames being aligned, and the apex of each of said frames extending away from its respective base in the same direction, a rod extending through said aligned apertures whereby said frames may be freely rotatable thereon, means



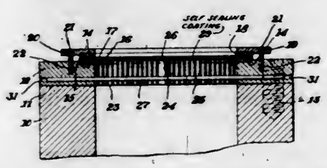
at one end of said rod to prevent said frames from passing thereover, means at the other end of said rod for preventing said frames from passing thereover, said last named means including gripping means.

2,449,869
CONNECTOR
William F. Watson, Bronx, N. Y.
Application February 14, 1947, Serial No. 728,601
2 Claims. (Cl. 285—44)



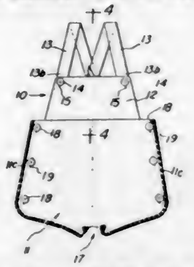
1. In association with an enclosure having an opening formed in the wall thereof, a connector comprising a tubular nipple positioned in said opening and provided adjacent the inner end thereof with a pair of diametrically opposed apertures, a pair of substantially U-shaped keeper rods extending through the bore of said nipple, the angulated portions at the inner ends of said rods projecting through said apertures and engaging the inner surface of said wall, the remaining end portions of said rods projecting laterally from the outer end of said nipple, the outer end portion of said nipple being externally screw-threaded, a nut on said threaded portion, and packing means provided between said nut and the outer surface of said wall, the mid portions of said rods being formed with a series of spaced weakening notches.

2,449,870
CLINOMETER
Walter Edward Austen, Melbourne, Victoria, Australia
Application October 19, 1944, Serial No. 559,406
In Australia September 11, 1943
6 Claims. (Cl. 33—218)



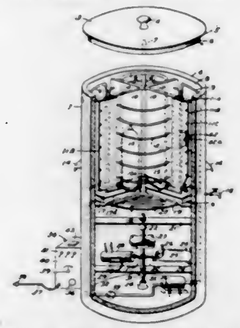
1. An improved clinometer comprising, a level bar, a pivotal protractor head resiliently mounted on the level bar and adapted to be held in adjusted pivotal position, a spindle securely fitted in said protractor head, a freely rotatable bearing on said spindle, a weighted arm connected to said bearing, a lug on said bearing, an index pivotally connected to said bearing lug, a protractor pivotally mounted on said spindle, clamping plates fitted on said spindle on opposite sides of said protractor, an arcuate slot in said protractor, a bolt fitted through said clamping plates and said protractor, a nut on said bolt adapted to cause the clamping plates to grip the protractor to hold it in adjusted position, and a resiliently mounted arrester on the protractor head adapted to be pressed against the weighted arm to restrain the index against movement whilst readings of the instrument are being made.

2,449,871
FOOT PROPELLED SKATE
Francis M. Bohler, Hawthorne, Calif.
Application August 18, 1945, Serial No. 611,375
1 Claim. (Cl. 280—11.11)



A skate adapted to derive motive power from the body weight of the user imposed thereon during the normal motions of walking, comprising a carriage having ground-engaging wheels thereon, at least one of which is a driving wheel, a rocking link mounted on said carriage for pivotal movement in a vertical plane, a treadle mounted on said rocking link and adapted to securely engage a leg portion of the user, a gear associated with said driving wheel, a reciprocable toothed element meshing with said gear, a crosshead carried by said toothed element, a disk carried by said gear having therein a peripheral groove in which said crosshead is slidably engaged, a link connecting said toothed element and crosshead with and to be reciprocated by and upon movement of said rocking link, an overrunning clutch interposed between said gear and said driving wheel for connecting together said gear and driving whel for unidirectional movement, and brake mechanism operative by said treadle, and disposed at a position in the path of movement of the operator's foot carried by said treadle, for engaging and resisting rotational movement of one of said carriage wheels.

2,449,872
ELECTRON DISCHARGE VESSEL
Arno Brasch and Wolfgang Huber, Brooklyn, N. Y., assignors, by mesne assignments, to Electronized Chemicals Corporation, New York, N. Y., a corporation of Delaware
Application October 4, 1946, Serial No. 701,132
18 Claims. (Cl. 250—154)



1. In an electron discharge vessel an electron transmitting window arranged in the wall of said discharge vessel and composed of a metallic foil covered on at least one face with a thin sheet of a self-sealing substance.

2,449,873
SUN SUIT TYPE OF APPAREL
George Brockman, New York, N. Y.
Application April 8, 1947, Serial No. 740,027
2 Claims. (Cl. 2—80)

1. A sun suit for juveniles including "shorts" comprising a front panel, a rear panel, a unitary crotch connecting said front panel and said rear panel, means joining side edges of said front panel to side edges of said rear panel to form the "shorts," and edging material binding the edges of said panels and said crotch, the contour in which the material of the "shorts" is cut and the binding of said edging material providing an upwardly extending concave crotch formation and bowing said crotch forwardly of the "shorts" to give greater room to the lower forward part thereof.

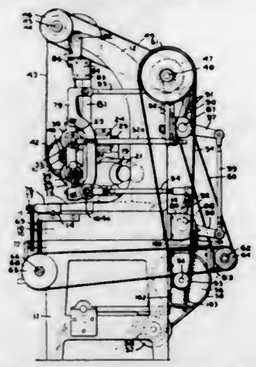
2,449,874
MACHINE FOR THE AUTOMATIC COOLING AND HEATING OF BABY BOTTLES AND FOOD
James Milman Bruning, Mount Vernon, Wash.
Application March 22, 1946, Serial No. 656,495
15 Claims. (Cl. 257—4)

1. A machine for the automatic cooling and heating of baby bottles and food comprising a heat insulated container, a rotary support for the bottles mounted in said container, means dividing said support into compartments, refrigerant means for cooling the bottles in certain of said compartments, heating means disposed in a station opposite one compartment, and means for intermittently rotating said compartments to and past said heating station.

2,449,875
MOUNTING STRUCTURE FOR WINDOWS
Robert Cadwallader, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application June 30, 1944, Serial No. 542,980
13 Claims. (Cl. 296—84)

13. The combination with an opening in a vehicle and a window therefor, of means for mounting the window in the opening, said means comprising a flange on the opening having a first portion extending inwardly of the vehicle and a second portion extending radially inwardly of the opening from the first portion, a sealing ring engaging the periphery of the window, fastening means engaging said sealing ring and fitting be-

tween the first portion of the flange and the window and installable from the outside of the vehicle so as to engage the second portion of the flange by entering it for securing the window to the second portion of the flange and thereby holding the window in place, and a covering strip seated upon the outer surface of said sealing strip and secured to the fastening means.



2,449,876
PLASTIC COMPOSITIONS AND PROCESS OF MAKING THE SAME
Francis E. Calvert and Paul A. Bury, Cincinnati, Ohio, assignors to The Drackett Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application March 19, 1947, Serial No. 735,800
10 Claims. (Cl. 260—7)

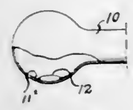
1. In a method of preparing a high impact thermosetting plastic preform of high density and flow, the steps which comprise reacting phenol, aniline, and formaldehyde, the formaldehyde being added as an aqueous solution, in the presence of calcium hydroxide as the sole catalyst at such temperatures and for times sufficient to form a primary resin, the amount of formaldehyde being 37.5% to about 49% of the weight of phenol, the calcium hydroxide being present in amount of about 4% to about 6% by weight of phenol, and the aniline being present in amount not greater than 12.5% by weight of phenol, thereafter mixing the primary resin with a vegetable protein in amount from 7% to 43% by weight of initial phenol, subjecting the mixture to elevated temperature sufficient to cause the protein to react with the resin, distilling the reaction product to remove excess formaldehyde and water, subjecting a mixture of the reaction product and a long fibered filler to intense kneading action at an elevated temperature to impregnate the filler, rolling the filled product to form a sheet, and cutting the sheet into preforms of a predetermined contour.

2,449,877
PREPARATION OF HYDROXYETHYL-2,5-DICHLOROBENZENE
Thomas S. Carswell, Longmeadow, and Ralph F. Hayes, Springfield, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 2, 1943, Serial No. 512,632
10 Claims. (Cl. 260—618)

1. A process for preparing alpha-hydroxyethyl-2,5-dichlorobenzene which comprises reacting alpha-chlor-ethyl-2,5-dichlorobenzene with caustic alkali while dissolved in a lower aliphatic alcohol.

2,449,878
COPYING LATHE
George Clausing and Charles B. Gary, Portsmouth, Ohio, assignors to Vulcan Corporation, Portsmouth, Ohio, a corporation of Ohio
Application December 27, 1943, Serial No. 515,704
7 Claims. (Cl. 142—15)

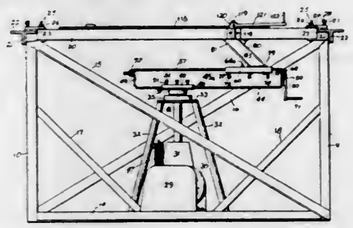
1. In a copying lathe including a main frame and a work holding frame supported thereon having means for holding and rotating a model and work piece, the improvement which comprises means for supporting said work frame including a pair of relatively long spaced links pivoted at one end upon said main frame and at their other ends upon said work frame, means for guiding said work frame including a pair of spaced parallel torque shafts rotatably mounted upon said main frame and disposed parallel to said work frame, means connecting said shafts to rotate them in synchronism, lateral extensions upon said shafts, and rigid connecting members interconnecting said lateral extensions with said work frame acting to constrain said work frame to move with a motion characterized as bodily movement at substantially a right angle to its general flatwise plane and without angular displacement from that plane.



2,449,879
SYNTHETIC RUBBER RECLAIMED WITH A RECLAIMING OIL COMPOSED OF SOLVENT NAPHTHA AND AN AROMATIC HYDROCARBON OIL
Frank W. Corkery, Crafton, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application February 26, 1944, Serial No. 524,070
12 Claims. (Cl. 260—33.6)

1. In reclaiming a synthetic rubber selected from the synthetic rubbers composed of the rubbery copolymers of butadiene and acrylic nitrile and the synthetic rubbers composed of the rubbery copolymers of butadiene and styrene the step of digesting the said synthetic rubber by subjecting the synthetic rubber in divided condition to heat and pressure in the presence of from 5% to 25% its weight of a reclaiming oil composed of crude heavy solvent naphtha boiling, within the approximate range of 165° C. to 185° C., and an aromatic oil formed from compounds found in coke oven light oil and boiling within the approximate range of 220° C. to 350° C. which has an aniline point below 25° C. by virtue of a substantial content of at least one compound responding to the formula

$$R_{x}^{P-A_{y}-P}R_{x}$$

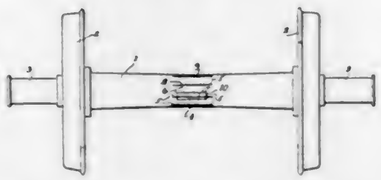


in which "P" is a phenyl group, "A" is an aliphatic group, "R" is selected from the group consisting of alkyl and alkenyl groups, "x" is a number up to unity and "y" is a number up to unity, the said crude heavy solvent naphtha and the said higher boiling aromatic oil being included in the proportion of 20% to 80% of the said crude solvent naphtha and 20% to 80% of the said higher boiling aromatic oil.

2,449,880
LIGHT SOURCE
James L. Cox, Ramsey, N. J., assignor to Duro-Test Corporation, North Bergen, N. J., a corporation of New York
Application May 16, 1945, Serial No. 594,033
1 Claim. (Cl. 176—122)

A method of generating visible light comprising mechanically agitating liquid mercury in contact with loose phosphor particles in an atmosphere of rare gas at low pressure.

2,449,881
VENTURI RING MACHINE
Bee Carl Crandall, Memphis, Tenn.
Application July 8, 1946, Serial No. 682,111
1 Claim. (Cl. 153—29)

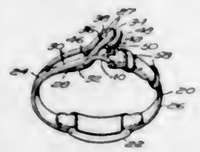


A sheet metal rolling device comprising a frame, a pedestal within said frame and terminating below the upper plane thereof, clamping means on said frame for clamping an apertured sheet metal work piece above said pedestal, a vertical shaft in said pedestal, a flat supporting member fixed on the upper end of said shaft, an elongated carriage, means securing said carriage on said supporting member for longitudinal adjustment relative thereto, a pair of work engaging rollers, means supporting said rollers on said carriage for adjustment along the length thereof, means for varying the disposition of said rollers one to the other and vertically relative to said work piece, and means for rotating said shaft whereby said rollers are rotated about the axis of said shaft in engagement with the inner edge of said apertured sheet.

2,449,882
HOLDER FOR INTRAVENOUS APPARATUS
Amy J. Daniels, North Wilbraham, Mass.
Application February 8, 1947, Serial No. 727,425
1 Claim. (Cl. 128—214)

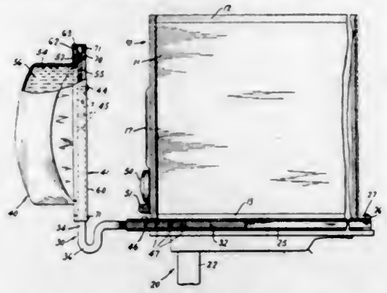
A device for attaching an intravenous tube to the limb of a person comprising in combination, an elongated substantially rigid supporting plate curved longitudinally to lie transversely across one side of a limb and substantially fit the same, said supporting plate adjacent its opposite ends provided with transversely extending slots, a flexible strap underlying said plate having end portions extending upwardly through said slots adapted to extend from opposite ends of the plate and encircle portions of a limb between the ends of said plate, means for securing said end portions of the strap together for securing the supporting plate to the limb, a relatively rigid elongated clip member extending longitudinally of the supporting member and secured intermediate its opposite ends to an intermediate portion of said supporting plate and having opposite free end portions extending towards opposite ends of said plate, and the opposite free end portions of the clip member extending upwardly away from said supporting plate and then downwardly towards said supporting plate with the extremities thereof spaced therefrom forming with the upper side of said plate clips at opposite sides of the intermediate portion of the plate having openings to receive a tube which are directed at opposite ends of said plate.

2,449,883
FATIGUE INDICATOR
Alfred V. de Forest, Marlboro, N. H., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application January 8, 1945, Serial No. 571,873
2 Claims. (Cl. 73—100)



1. The method of determining the approach of the fatigue limit of a member subject to fatigue strains consisting in attaching to a strainable portion of the member an electrical conductor whose fatigue limit is of a predetermined value below that of the member under test so that the degree of progress of fatiguing may be determinded by the fatigue failure of the conductor and then periodically electrically checking said conductor to determine whether the conductor has broken whereupon in the event of a broken conductor it is known that the fatigue limit of the member has at least reached that of the conductor.

2,449,884
STRAP
Charles A. Domler, Johnston, R. I.
Application May 4, 1946, Serial No. 667,311
13 Claims. (Cl. 224—4)

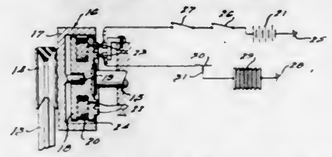


10. A continuously assembled adjustable and releasable strap, comprising a flexible strap of a length to encircle a limb or body torso or join two article portions together, having an adjustable end slit for a substantial distance longitudinally thereof into transversely separable upper and lower portions terminating in a joined tip, one of said separable portions having a series of longitudinally spaced adjusting holes therein, and a buckle having side bars, a forward cross bar permanently retained in the space between said separable portions by said tip, movable for adjustment and release longitudinally thereof, and a rear bar having the opposite strap end fixedly secured thereto and having a forwardly extending tongue mounted thereon to pivot upwardly to be inserted through a selected hole in said adjustable strap end and downwardly in adjusted position adjacent said forward bar.

2,449,885
STRAP WITH INSEPARABLE ENDS
Charles A. Domler, Johnston, R. I.
Application July 10, 1946, Serial No. 682,658
6 Claims. (Cl. 224—4)

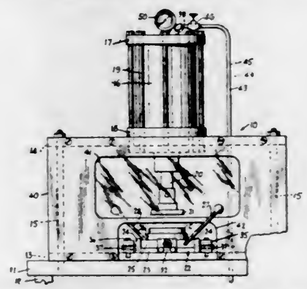
2. A continuously assembled adjustable and releasable strap, comprising a flexible strap of a length to encircle a limb or body torso or join two article portions together, having an adjustable end vertically split by spaced vertical slits for a substantial distance longitudinally thereof into a center portion and side portions terminating in a joined tip, said center portion having a series of longitudinally spaced adjusting holes therein, whereby said center portion may be depressed between said side portions so that said center portion may form a lower layer and said side portions an upper layer with a transverse slit or space between them, and a buckle having side bars, a forward cross bar permanently retained in said transverse slit by said tip, movable for adjustment and release longitudinally thereof, and a rear bar having the opposite strap end fixedly secured thereto and having a forwardly extending tongue mounted thereon to pivot upwardly to be inserted through a selected hole in said adjustable strap end and downwardly in adjusted position adjacent said forward bar.

2,449,886
APPARATUS FOR MAGNIFYING THE IMAGES ON TELEVISION SCREENS
John S. Dougherty, Jackson Heights, N. Y.
Application March 20, 1948, Serial No. 15,988
5 Claims. (Cl. 88—39)



1. Apparatus for magnifying the image on a television screen, said apparatus comprising two parallel tubes of rectangular cross section for location on a table with a television set supported by them above the top of the table, a cross bar on top of the rearward ends of the tubes and connected at its opposite ends with the tubes for holding the tubes spaced from one another by a distance substantially less than the width of the cabinet of any of the television sets with which the apparatus is intended to be used, a bracket including two horizontally extending rods that fit into and slide lengthwise of the rectangular tubes with a telescoping action, each of said rods having a sideways extending off-set portion at its forward end extending in a direction away from the other rod, a lens substantially wider than the television screen with which the apparatus is intended to be used, a flange around the perimeter of the lens, a frame into which the flange of the lens is fitted, fastening means for holding the lens in the frame, flanges within the frame in position to hold the lens against lateral displacement in the frame and forming with outer walls of the frame substantially vertical guideways on both sides of the frame, two posts substantially parallel with one another and extending upward through the guideways in the lens frame and providing bearing surfaces along which the lens frame is adjustable to regulate the height of the lens to that of the television screen, means for holding the lens frame at a selected adjustment lengthwise of the posts, said posts extending downward below the level of the rods and being integrally connected with the outer ends of the sideways-extending off-set portions of the rods by downwardly-extending off-set connections.

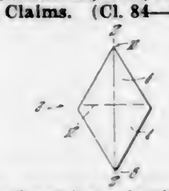
2,449,887
COLLET CHUCK
Robert O. Edel, Frankenmuth, and Leo Sutton, Bridgeport, Mich.
Application September 16, 1946, Serial No. 697,304
6 Claims. (Cl. 279—49)



1. A collet chuck comprising a threaded shank having a tapered bore in the lower end thereof, a nut threaded on said shank and formed with a circumferential groove, opposed flatted sections on said nut flush with the bottom wall of said groove, a circumferentially contractable collet mounted in said tapered bore and formed with a rib intermediate its length, said collet being tapered in opposite directions from said rib, a clamping member piloted on the outer tapered end of the collet, and formed with inwardly projecting flanges adapted to slide over said flatted sections, said member being rotatable into locked engagement with said groove, said nut and member being rotatable as a unit for exerting collapsible pressure on said collet.

2,449,888
COMPRESSOR DRIVE CONTROL
Franklin W. Edwards, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application September 11, 1944, Serial No. 553,526
3 Claims. (Cl. 62—2)

3. In a motor vehicle having an engine, a refrigerant compressor, a magnetic coupling adapted to transmit drive from said engine to said compressor and control means for said coupling comprising a source of electrical energy and a circuit for said energy to said coupling, said circuit including a variable resistance and a temperature responsive device adapted to vary said resistance.

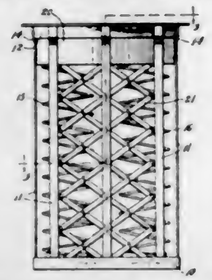


2,449,889
FLUID PRESS MOTOR AND CONTROL VALVE THEREFOR
Carl Eisen, Bronx, N. Y.
Application July 25, 1944, Serial No. 546,556
1 Claim. (Cl. 121—38)

A fluid press system, including a main expansible cylinder means for converting fluid pressure into mechanical pressure, a unitary source of fluid pressure, and a control valve system for securing two rates of expansion of said cylinder means, said valve system including a single secondary expansible transfer chamber, mechanical means for altering the effective longitudinal dimension thereof, valve means for admitting fluid from said unitary source to one end of said chamber, a plurality of cylinder feed pipes opening into said chamber sequentially and additively, as said chamber is expanded, the pipe first opening thereinto having a constricted

portion, whereby fluid flow therethrough to said cylinder means takes place at a relatively reduced rate, thereby producing a relatively reduced rate of expansion of said cylinder means, and at least one other pipe opening later, but while said first pipe is still opened, into said chamber affording substantially unrestricted fluid flow to said cylinder means, means for determining the degree of expansion of said transfer chamber, and an exhaust pipe for exhausting fluid from said cylinder means, leading to said valve, said valve system also including means for porting said exhaust pipe to the atmosphere and means for operating said porting means simultaneously with the reduction of the longitudinal dimension of said transfer chamber to a minimum.

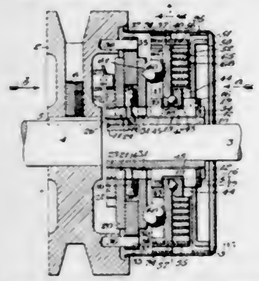
2,449,890
PICK FOR STRINGED INSTRUMENTS
Robert C. Garlick, East Longmeadow, Mass.
Application October 11, 1945, Serial No. 621,672
2 Claims. (Cl. 84—322)



1. A pick for the strings of stringed instruments having different characteristics comprising, a relatively thin flat unitary body made from flexible material having its greatest transverse width at a central portion thereof and opposite side edges of opposite end portions of the pick converging from said central portion thereof providing opposite pointed string engaging ends, opposite side faces of one end portion converging from said central portion outwardly to the pointed end of said portion providing a flexible end portion that is progressively tapering and flexible outwardly from said central portion and the opposite side faces of the other end portion disposed in substantial parallelism from the central portion outwardly providing a relatively less flexible end portion, all adapted and arranged whereby when the pointed end of said other relatively less flexible end portion is to be used for picking certain strings the said one flexible end portion may be gripped between the thumb and finger at different distances outwardly from said central portion to obtain different degrees of flexibility and when the pointed end of said one flexible end is to be used for picking certain other relatively less flexible strings said other end portion of the pick may be gripped between the thumb and finger leaving the said one flexible end free for flexing outwardly from said central portion.

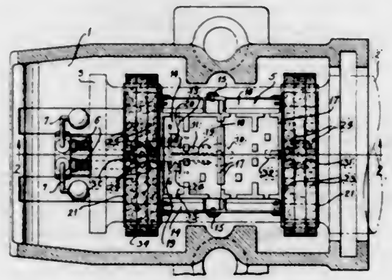
2,449,891
AMMONIATED ACID ACTIVATED MONTMORILLONITE CATALYST AND PREPARATION THEREOF
Wright W. Gary, Los Angeles, and Robert B. Secor, South Gate, Calif., assignors to Filtrol Corporation, Los Angeles, Calif., a corporation of Delaware
Original application February 7, 1944, Serial No. 521,446, now Patent No. 2,432,746, dated December 16, 1947. Divided and this application July 3, 1947, Serial No. 758,776
15 Claims. (Cl. 252—196)

6. An ammoniated acid activated montmorillonite catalyst having ammonium ions in the base exchange positions of said montmorillonite.



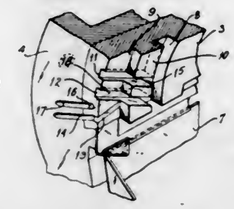
13. An acid activated montmorillonite catalyst produced by heating and thereby removing ammonia from such a catalyst having ammonium ions in the base exchange positions of said montmorillonite.

2,449,892
APPARATUS FOR STORING STACKED ARTICLES
William J. Gibbs, Brooklyn, N. Y.
Application February 17, 1945, Serial No. 578,385
10 Claims. (Cl. 312—71)



1. A device for feeding and holding stacked articles, comprising a housing having a base portion and a top portion, a carrier for stacked articles reciprocable within the housing, the top portion of said housing being provided with an opening coextensive with said carrier to permit articles to be placed on the carrier, helical compression spring means disposed between said carrier and base portion to motivate said carrier and its load of stacked articles, and extensible and retractable means connected with the base portion and carrier, said last mentioned means being a lazy-tong, said lazy-tong including separate pairs of links at the top and bottom of the lazy-tong which are slidably connected to said base portion and carrier and movable outwardly thereon during the contraction of said lazy-tong, said spring means being calibrated to support said carrier in various positions wherein the outer face of the outermost article of a stack of uniform articles on the carrier will be disposed at a predetermined level.

2,449,893
CLUTCH AND BRAKE MECHANISM
Wilbert M. Gilman, Wellesley Hills, Mass., assignor, by mesne assignments, to Cread Engineering and Research Company, Cranston, R. I., a corporation of Rhode Island
Application August 22, 1945, Serial No. 611,999
19 Claims. (Cl. 192—17)

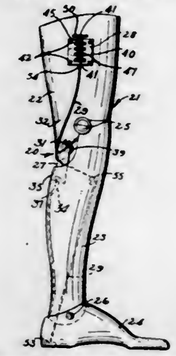


1. In a clutch mechanism, a rotary driving element, a rotatable driven element, clutch members engageable for connecting said driving element to rotate the driven element, an operating member rotatable relatively to said clutch members to engage said members, resilient means for relatively rotating said operating member, snubbing means to retard the rotation of the operating member to cause it to release the clutch members from engagement, and braking means for arresting the rotation of the driven element after the clutch members have been disengaged.

2,449,894
LUBRICATOR DISTRIBUTOR
James J. Hennessy, Montclair, N. J.
Application October 17, 1945, Serial No. 622,866
8 Claims. (Cl. 308—85)

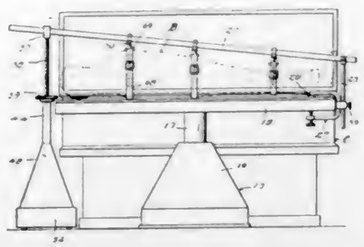
3. In a distributor device for a journal lubricator of the class described, a pan-like member, a pad of absorbent material in said member and having a face arranged for application to a journal, the face of said pad opposite said journal engaging face normally being spaced from an opposing wall of said member, a yielding mounting in said member urging said pad outwardly thereof, and said pad and said member having interengaging elements limiting movement of said pad outwardly of said member.

2,449,895
RAILWAY JOURNAL BEARING
James J. Hennessy, Montclair, N. J.
Application October 20, 1945, Serial No. 623,529
6 Claims. (Cl. 308—79.1)



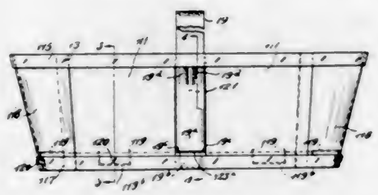
1. A railway axle journal bearing with a journal engaging face having a circumferential groove positioned to trap lubricant as it moves towards the end of the bearing and providing an area free of engagement with the journal to which it is applied whereby lubricant in this area between the bearing and the journal will be relieved of pressure, and a passage extending downwardly from said area and to the end of the bearing to lubricate said end.

2,449,896
BLOUSE ANCHOR
Doris Jane Hennie, Little Falls, N. J.
Application December 17, 1947, Serial No. 792,165
5 Claims. (Cl. 2—323)



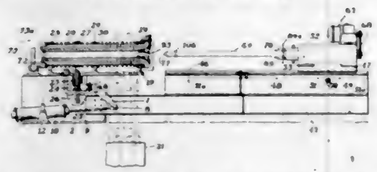
1. The combination with a skirt of a blouse anchor for restraining a blouse being worn with the skirt from working itself out of the skirt, said anchor comprising a substantially rigid member configured to define a substantially centrally located vertically extending wedge slot for engagement with a blouse and having an opening on each side of said slot, a pair of elastic tapes extending one through each of said openings, each of said tapes being doubled back on itself with its ends drawn out horizontally in a direction away from said wedge slot, each tape being fastened adjacent its ends to the inside of the skirt adjacent the skirt waistband but far enough below the upper edge of said waistband so that the blouse anchor is concealed, the tapes being drawn out substantially taut without normally being under any substantial degree of elastic tension.

2,449,897
KNEE LOCK FOR ARTIFICIAL LEGS
George A. Hinkle, New York, and Alfred T. Weger, Baldwin, N. Y.
Application March 7, 1946, Serial No. 652,682
9 Claims. (Cl. 3—2)



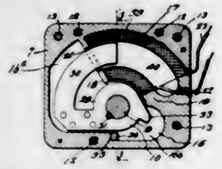
2. In an artificial leg, comprising thigh, shank and foot sections pivotally joined together, a locking means disposed to lock the shank and thigh sections to prevent pivotal movement thereof, an adjusting screw operatively associated with the locking means and disposed to permit adjustment of the amount of pivotal movement between the shank and thigh section which can occur when the locking means is effective, spring means disposed to cause locking action of the locking means, a line extending between the thigh and foot sections and disposed upon being tensioned to prevent locking action of the locking means, adjusting means disposed on the exterior of the thigh section arranged to determine the angular position of pivotal movement of the foot section at which tension is applied to the cord to prevent action of the locking means, said adjusting means comprising a frame having a plurality of slots therein, and a catch secured to the line which may be selectively positioned in any one of the slots.

2,449,898
CADAVER LIFTER
Bruce A. Hower, Gary, Ind.
Application July 3, 1945, Serial No. 603,020
4 Claims. (Cl. 27—28)



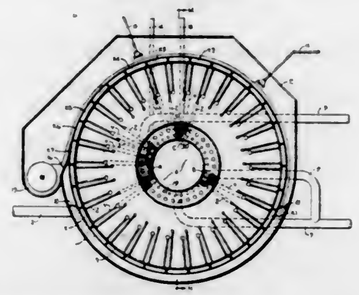
1. A lifting means for lifting a body from a table comprising an elongated bar, a vertical rod pivotally secured to one end of said bar, means removably mounting said rod at one end of said table, means independent of said table engaging the opposite end of said bar for elevating the latter, and means supporting the body from said bar.

2,449,899
BASKET
Henry S. Johns, Cleveland Heights, Ohio
Application April 17, 1944, Serial No. 531,397
5 Claims. (Cl. 217—122)



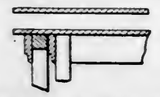
2. A basket comprising a bottom and side and end panels made of relatively thin and light material, a vertical slot being provided at the central portion of each side of the basket between the panels on such side, inner and outer upper reinforcing bands to and between which the upper ends of the side and end panels are secured, an outer lower reinforcing band to and within which the lower ends of the side and end panels are secured, and means for securing the basket bottom within the bottom portions of the side and end panels, an inverted U-shaped handle the lower portions of the sides whereof are insertable into the vertical slots and between the inner and outer upper reinforcing bands and within the lower reinforcing band, the bottoms of the sides of the handle being reduced to form tongues with shoulders thereabove, loops secured to the basket bottom and extending outwardly into the said slots and above the lower reinforcing band and adapted to receive the said tongues and to engage said shoulders, and one or more projections on each of the sides of the handle in position to engage the lower edge of an upper reinforcing band when the tongues on the lower ends of the handle sides are positioned within said loops.

2,449,900
APPARATUS FOR FORMING MOLDS FOR CENTRIFUGAL CASTING AND CENTRIFUGALLY CASTING PRODUCTS THEREIN
Loyal L. Johnston, Zelienople, Pa., assignor to Herman Pneumatic Machine Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application February 18, 1946, Serial No. 648,318
11 Claims. (Cl. 22—20)



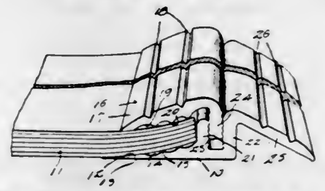
2. In a centrifugal casting apparatus, a flask having openings at its opposite ends and having an axis about which it is rotatable, driving means operatively connected with the flask to rotate the flask about its axis, means mounted in position outside the flask for introducing mold forming material into the flask and, as introduced, disposing it in contact with the inside of the flask throughout substantially the entire circumference thereof while the flask is circumferentially closed, compacting mechanism, means for moving the compacting mechanism into the flask along the axis of the flask, the compacting mechanism protruding through the open ends of the flask when in position therein, supporting members outside the respective ends of the flask and, when the compacting mechanism is moved into the flask, disposed in the axis of the flask for supporting the compacting mechanism and means for relatively moving transversely of the axis of the flask the flask and said supporting members to dispose the compacting mechanism in an eccentric position in the flask to compact the mold forming material as the flask rotates to form a cylindrical mold having desired diameter.

2,449,901
ELECTROMAGNETIC DRIVE
William A. Kaiser, Syracuse, N. Y.
Application May 22, 1946, Serial No. 671,459
2 Claims. (Cl. 175—337)



1. In an electromagnetic device in combination, a rotatable shaft, a casing provided with bores for journalling said shaft and with a number of cavities, one of said cavities being arranged centrally around said shaft with a larger and a smaller section extending outwardly and radially therefrom on opposite sides, a further peripheral cavity having the shape of an arcuate annular sector, a partition wall with an opening between said last named cavity and the adjacent outwardly extended cavity section, a movable member fixed on said shaft comprising a central hub member, two radially extending portions, one of said portions carrying an annular arcuate portion, the other radially extending portion being a stop member, said movable member being housed and movable within the first named cavity, with the radial portion carrying the arcuate portion movable within the larger outer section of the first named cavity and the stop member movable within the smaller radially and outwardly extending cavity section, part of the walls of the latter being provided with a resilient lining and acting as a counterstop, and an arcuate hollow solenoid coil arranged in the peripheral cavity shaped as an arcuate annular sector the curved hollow interior of said coil being centered on the axis of said shaft and adapted to accommodate the annular arcuate portion of the movable member.

2,449,902
FILTRATION
Wynkoop Kiersted, Jr., Scarsdale, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 22, 1945, Serial No. 595,164
2 Claims. (Cl. 210—202)

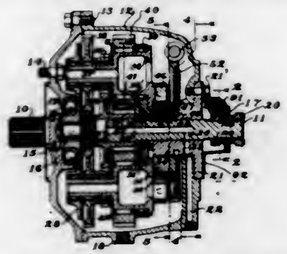


2. In the continuous filtration of solids from a mixture of solids and mother liquid by means of a continuous rotary drum filter, the filter drum comprising a plurality of hollow segmental filter sections whose leading and trailing edges are in fluid communication through leading and trailing drain pipes with a filter valve, wherein the drum is continuously rotated so that each filter section submerges within and then emerges from the filtering mixture, a filter cake of solids is formed upon the exterior of each section, and filtrate is forced through the cake into the interior of each section and is discharged therefrom through said drain pipes and filter valve, the filter cake during rotation of the filter section after emerging from the filter mixture is subjected to washing by passing a wash liquid therethrough and to drying by passing gas therethrough during application of suction from the filter valve through said drain pipes, and upon further rotation moves into a zone of cake removal, the steps comprising admitting gas under low pressure to the interior of said section through its trailing drain pipe following said drying and during its advance toward the zone of cake removal, discharging so admitted gas through the leading drain pipe toward the filter valve, subsequently and while still prior to removing the cake from the surface, closing the filter valve outlet of said leading drain pipe when the leading edge of the cake bearing section is about 6 inches in advance of the point of removing the cake therefrom, continuing the admission of said gas through said trailing drain pipe after said closing to create thereby a back pressure within the filter section sufficient to distend the filter surface and facilitate removal of the cake from the distended surface without reversing the direction of fluid flow within the leading drain pipe during the building up of said back pressure, and removing the cake from the filter surface.

2,449,903
SECTIONAL DINING TABLE
Robert Langstaff, Donora, Pa.
Application January 20, 1947, Serial No. 723,003
2 Claims. (Cl. 311—1)

1. An extension table comprising a pair of table members, each formed of a top and a base, one of said members including link means connecting the top thereof to the base whereby said top may be elevated above the base, the other table member being of such size and shape that it may be shifted into the base of said one member with the top thereof interposed between the base of said one member and the top of the latter.

2,449,904
EDGE MOLDING
Edward C. Lorraine, Elmhurst, N. Y.
Application October 21, 1946, Serial No. 704,750
3 Claims. (Cl. 16—7)



1. A floor covering securing means and edging comprising an elongated base member adapted to be placed on a floor and to underlie an edge of the covering, said base constituting a lower clamping jaw, an upper clamping jaw, a pair of parallel keeper forming walls carried by one of said jaws, a downwardly and outwardly inclined shield carried by one of said keeper forming walls, and a locking tongue engageable between the said walls for connecting the upper and lower clamping jaws.

2,449,905
POWER UNIT
Delbert L. Lotts, Kent, Ohio, and Roy T. Bucy and Harold E. Waldron, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application November 2, 1942, Serial No. 464,182
1 Claim. (Cl. 74—114)

In combination, a rotatable driving carrier, a driven shaft coaxial with the carrier, a driven gear fixed to the driven member adjacent the carrier, an overspeed member mounted on the carrier for angular movement about an axis revolving about the axis of the driving member, an intermediate gear mounted on the overspeed member in spaced relation to the carrier, a one-way clutch acting between the overspeed member and the intermediate gear, a first compound gear rotatably mounted on the driven shaft and having two sections, one section meshing with the interme-

diate gear, a second compound gear rotatably mounted on the overspeed member between the intermediate gear and the carrier and having two sections, one section meshing with the driven gear and the other section meshing with the other section of the first compound gear, means forming a circular track, control means for the overspeed member traveling on the circular track, and means for making the circular track concentric or eccentric with the axis of the driving carrier and the driven shaft, whereby a concentric position of the circular track will prevent relative an-

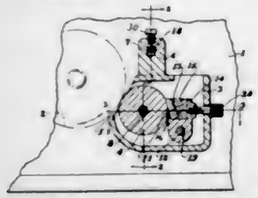
gular movement between the overspeed member and the driving carrier and thereby produce equal angular velocity of the driving carrier and the driven shaft, and an eccentric position of the circular track will cause rotation of the driving member to produce relative angular movement between the overspeed member and the carrier, said relative angular movement being transmitted through the one-way clutch and the intermediate compound, and driven gears to the driven shaft so as to result in an angular speed of the driven shaft in excess of that of the driving carrier.

2,449,906
OXIDATION OF HETEROCYCLIC AROMATIC NITROGEN COMPOUNDS
Max B. Mueller, Dumont, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application November 21, 1944, Serial No. 564,553
10 Claims. (Cl. 260—295.5)

1. In the catalytic oxidation to a pyridine carboxylic acid of an N-heteroaryl compound containing a pyridine nucleus and containing an oxidizable organic grouping attached to the nitrogen-containing aromatic nucleus by at least one carbon-to-carbon linkage, the improvement which comprises conducting the oxidation by reacting nitric acid with a solution containing the N-heteroaryl compound and a relatively small amount of a substance selected from the group consisiting of selenium and a selenium compound dissolved in sulfuric acid, and recovering a compound containing the pyridine carboxylic acid radical.

2,449,907
PICTURE FRAME
Norman E. Olin, New York, N. Y.
Application February 17, 1948, Serial No. 8,870
3 Claims. (Cl. 248—33)

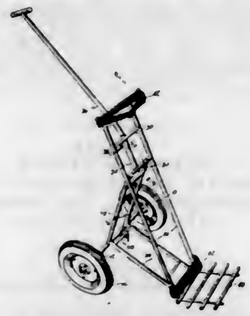
1. A picture frame, a substantially triangular block member fixedly secured to the back of the latter, a prop turnably attached to said block member, and means for securing the picture frame, the block member and the prop together, said prop and block member having their engaging surfaces formed at an angle, whereby the prop, when swung from a position of support through a 180 degree angle, will lie parallel to



and in flat engagement with the back of the picture frame.

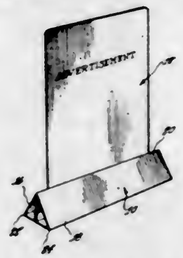
2,449,908
PREPARATION OF 2-AMINO-4-METHYL PYRIMIDINE
Charles Prevost, Paris, France, assignor to Societe Des Usines Chimiques Rhone-Poulenc, Paris, France, a French company
No Drawing. Application January 2, 1946, Serial No. 638,713. In France May 26, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 26, 1964
6 Claims. (Cl. 260—251)

1. Process for the preparation of 2-amino-4-methyl-pyrimidine which comprises condensing 1-butynone-3 with a guanidine salt, and recovering the 2-amino-4-methyl pyrimidine produced in the said condensation.



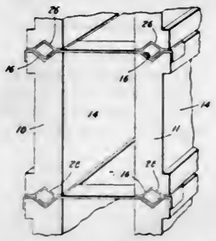
2,449,909
INK RESERVOIR FOR MARKING MACHINES
David F. Putnam, Keene, and Charles H. Cheeseman, Marlboro, N. H., assignors to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application September 20, 1945, Serial No. 617,460
3 Claims. (Cl. 101—364)

1. An inking mechanism for marking machines comprising an ink roll, a housing member having an open side, a combined ink-reservoir and doctor member situated within the housing and provided in its upper side with an open-topped ink-containing chamber, one side wall of which is lower than the other side walls, said lower side wall presenting at its top a knife edge, means supporting the ink roll within the housing but entirely outside of said ink-containing reservoir and in a position to project slightly through the open side of the housing and with the plane of the knife edge top of said lower wall having a tangential relation to the cylindrical peripheral surface of the ink roll, means to rotate the roll in a direction to cause the surface



thereof above the wall to move downwardly towards said knife edge, the latter constituting a doctor element which gages the thickness of the ink film adhering to the wall, and means pivotally supporting the combined ink-reservoir and doctor element for adjustment about an axis parallel to that of the ink roll thereby to vary the thickness of said ink film.

2,449,910
FOLDING GOLF CLUB CART
William Quiring, Wichita, Kans., assignor to Quiring-Owston, Inc., Wichita, Kans., a corporation of Kansas
Application November 5, 1945, Serial No. 626,593
3 Claims. (Cl. 280—36)

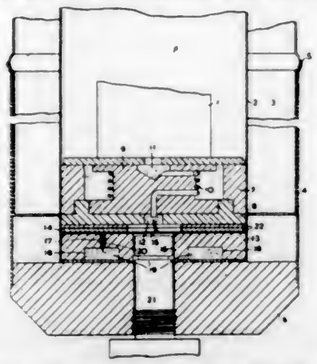


1. A cart of the kind specified comprising a wheel and axle unit; a bed to receive the article being carted; framework on the said unit for mounting the bed in an inclined position, said bed having the framework swingably secured thereto for collapsing into substantially the same plane therewith, said framework having a normally horizontal portion, and a normally vertical portion diverging from a point of attachment with the axle of the said unit; and common means for securing the framework to the axle and securing together the proximal ends of said portions, said vertical portion having laterally extending stub pins thereon, said horizontal portion having open end tubular members for receiving said stub pins.

2,449,911
FOLDABLE DISPLAY DEVICE WITH TRIANGULAR BASE
Louis H. Roth, Forest Hills, N. Y., assignor to Commanday-Roth Co., Inc., New York, N. Y., a corporation
Application June 14, 1947, Serial No. 754,626
5 Claims. (Cl. 40—124.1)

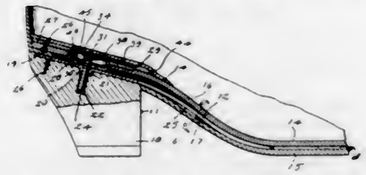
1. A display device comprising a triangular base formed of sheet material and having its sides foldably connected to each other at the apex of the base, said base having bottom parts foldably connected to said sides, respectively, at the lower ends thereof, one of said bottom parts having separate upwardly folded end portions in longitudinally spaced relation and the other of said parts having an upwardly folded end portion having a part which is exposed at the space between said spaced end portions, said base having a slot in the top thereof and said upwardly folded portions being in substantial vertical alignment with said slot, and a vertical panel upstanding from said base and extending through said slot into the base, the lower end portion of said panel being positioned at the same side of the upwardly folded portions of both of said bottom parts and secured to said first mentioned end portions and to part of said other end portion in the space between said first mentioned end portions and a positioning member for said panel foldably connected to said one of said bottom parts in position between said spaced end portions.

2,449,912
MOLD FOR FORMING CONCRETE WALLS IN SITU
Roy William Rumble, Pretoria, Transvaal, Union of South Africa
Application September 30, 1944, Serial No. 556,580
In the Union of South Africa October 5, 1943
2 Claims. (Cl. 25—131)



2. The combination with two shuttering walls, each composed of panels detachably assembled edgewise with waling pieces between, said waling pieces being interlocked with said edges, of cross ties extending between and interengaged with the two walls, and having their ends engaged between the waling piece and the edges of the panels, the ties providing means to engage the waling pieces above and below.

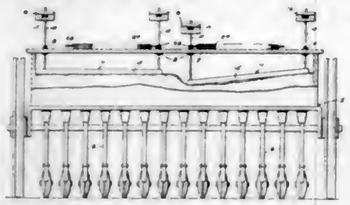
2,449,913
WATER-BORNE FLARE AND THE LIKE
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England
Application June 22, 1945, Serial No. 600,952
In Great Britain April 5, 1944
1 Claim. (Cl. 102—7)



A water-borne illuminating device comprising an inner casing, illuminating means contained in said inner casing, two plates located in the lower end of said inner casing below said illuminating means, a recess in the upper of said plates, a charge of powder in said recess, a delay fuze one end of which is embedded in said charge, a primed cambric disc between said two plates, an annular recess in the lower face of the lower of said plates, a separating charge of powder in said annular recess, a piece of quickmatch connecting said cambric disc with said charge, a second piece of quickmatch connecting said cambric disc with said separating charge, a buoyancy chamber secured

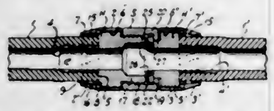
to said inner casing, an outer casing enclosing the lower end of said inner casing and secured to said buoyancy chamber by a weak joint, a contact fuze in the lower end of said outer casing adapted upon actuation to ignite said cambric disc which on the one hand ignites said first piece of

quickmatch, said charge of powder and said delay fuze and on the other hand ignites said second piece of quickmatch and said separating charge, whereby said outer casing is separated from said buoyancy chamber after said delay fuze has been ignited.



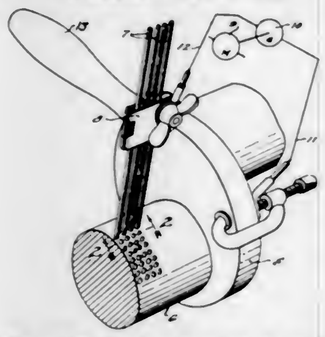
2,449,914
DETACHABLE HEEL
Harvey Simonetti, Hyattsville, Md.
Application February 21, 1947, Serial No. 729,920
6 Claims. (Cl. 36—36)

1. A shoe comprising an upper, an insole, an outsole, a heel, a plate in the rear of said shoe above said insole, said plate formed with a recess centrally thereof, said recess extending downwardly through said insole, a plate on said heel between said heel and said insole, a bolt carried by said heel extending upwardly through said latter plate and into said recess, a squared shank on said bolt in said recess, said shank formed with a groove on one side below the upper end thereof forming a hook, a bifurcated lever, a cross bar between the arms of said lever engageable in said hook, said lever extending beyond said cross bar forming a cam on said lever whereby pivotal movement of said lever in one direction about said cross bar engaged in said hook will effect locking of said heel on said shoe, and rocking of said lever in the opposite direction will permit removal of said lever from said hook and removal of said heel from said shoe.



2,449,915
INDICATOR ATTACHMENT FOR PLANTERS
Herbert F. Stalder, Harper, Kans.
Application September 3, 1947, Serial No. 771,935
4 Claims. (Cl. 116—114)

1. The combination with a planter and hopper thereof having a cover, of an indicator indicating the level of the quantity of material within the hopper, said indicator embodying a follower plate, indicator rods pivotally and slidably connected to the ends of the follower plate, said cover having openings through which the rods extend above the cover visible to the operator of the planter,



said rods indicating the level of the material within the hopper, and stops adjustably mounted on the indicator rods, said stops adapted to engage the hopper restricting downward movement of the rods, including the quantity of material in the hopper.

2,449,916
COUPLING DEVICE
William H. Tandet, Stamford, Conn.
Application September 22, 1945, Serial No. 617,982
1 Claim. (Cl. 285—86)

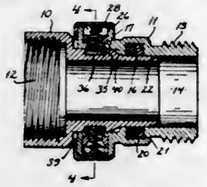
In a swivelled coupling sleeve for a coupling head of the type comprising a plug having an external thread and an internal bore, said plug having a forward tubular extension of said bore; the improvement comprising a disc axially mounted on said extension, said sleeve having a rearward rim located between said disc and the body of the plug, said disc being provided with an internal shoulder thereby to provide a washer seat, a washer fitted in said seat, and the forward end of said tubular extension being expanded in diameter to prevent forward motion of the disc and fitted washer.

2,449,917
SURFACE TREATMENT OF METAL
John A. Tansley, New Castle, Ind., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 19, 1945, Serial No. 583,481
4 Claims. (Cl. 219—15)

1. The method of preparing a surface of a metallic article for receiving a layer of metal to

be fixed thereto which comprises positioning said article and a carbon electrode in electric circuit with a source of electric energy, relatively moving said article and electrode alternately from one spaced relationship to another spaced relationship to respectively create and break an electrical arc therebetween, and subjecting successive selected areas of said surface to the arc so created under conditions of current flow sufficient to fuse the metal at said selected areas and to displace at least a portion of such fused metal into projecting relationship from other areas of said surface adjacent said selected areas.

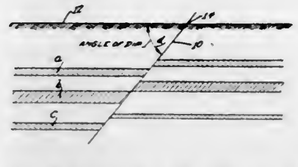
2,449,918
SASH HARDWARE
Harry W. Valentine, deceased, late of Oakland, Calif., by Helen B. Valentine, administratrix, Berkeley, Calif.
Application June 3, 1946, Serial No. 673,944
3 Claims. (Cl. 292—74)



3. A sash holding device comprising a channel adapted to be sunk into the vertical rail of a window sash, a friction strip adapted to be mounted in a window casing, resilient means mounted in said channel adapted to engage said friction strip in frictional and slidable relationship, and means between said channel and said friction strip providing for mutual engagement thereof in sliding and inseparable relationship.

2,449,919
3-METHYLSULFONAMIDO-4-AMINO DIMETHYL ANILINE PHOTOGRAPHIC DEVELOPER
Arnold Weissberger, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 5, 1947, Serial No. 759,302
2 Claims. (Cl. 95—88)

1. A photographic developing solution comprising as the developing agent 3-methylsulfonamido-4-amino-dimethyl aniline.

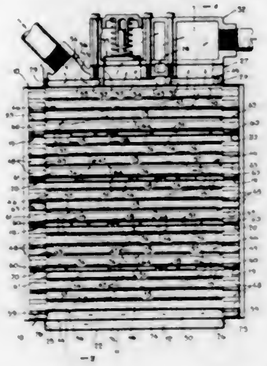


2,449,920
CONDUIT COUPLING
Eugene D. Williams, Cleveland Heights, Ohio, assignor, by mesne assignments, to Diversified Designing & Machine Products Corporation, Cleveland, Ohio, a corporation of Ohio
Application March 7, 1946, Serial No. 652,605
6 Claims. (Cl. 285—169)

1. A coupling comprising a pair of round telescoping members, the inner member having a recess leading circumferentially from the round exterior of that member and terminating at the other end in an abrupt shoulder, a radially movable detent carried by the outer member, a spring

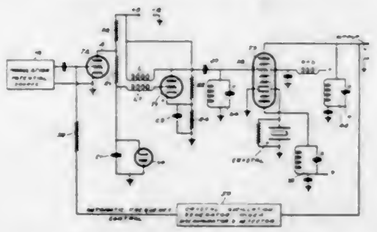
pressing said detent inwardly, and means for forcing the detent outwardly against the action of the spring as the members are shoved together longitudinally.

2,449,921
SEISMIC METHOD OF LOCATING FAULTS
Alexander Wolf, Houston, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 24, 1943, Serial No. 515,486
1 Claim. (Cl. 181—0.5)



A method of locating the position of a fault in an area in which the presence of a fault is suspected, which comprises selecting a series of shot points along a line substantially at right angles to the expected strike of the fault, placing groups of seismic detectors along said line of shot points, each group of detectors being disposed substantially symmetrically with regard to its respective shot point, firing an explosive at each of said shot points, recording seismic reflections received by said detectors from substantially horizontal beds to indicate the dip and position of said beds, recording other reflections obtained while simultaneously eliminating reflections from said substantially horizontal beds, and determining, from the reflections obtained from said substantially horizontal beds and from said other reflections, the position of the fault.

2,449,922
COOLER FOR VISCOUS LIQUIDS
Soren K. Andersen, Los Angeles, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California
Application March 10, 1945, Serial No. 582,080
12 Claims. (Cl. 257—128)



3. A cooler for liquids that are viscous when cold, comprising: a shell; means cooperating with the outer surface of said shell to define a warm up chamber from which heat may be imparted to the shell; baffle means dividing the space within the shell into a series of flow chambers, each having at least one extremity in contact with a heated area of the inner surface of the shell; liquid inlet and outlet means connected to respective chambers, said baffle means being pro-

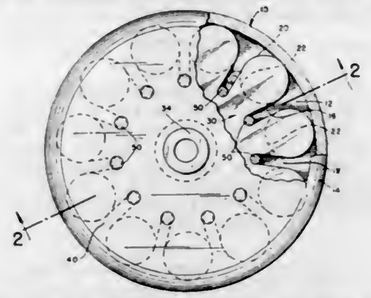
vided with port means connecting said chambers in series between said inlet and outlet means to define a tortuous flow path through the cooler; a core comprising a bundle of parallel open ended tubes within each of said chambers, arranged in rows generally parallel to said baffle means, the majority of said tubes of each bundle being relatively closely spaced, to provide relatively restricted passages for efficient heat exchange between liquid flowing in said passages and coolant passing through said tubes; means defining be-

tween each baffle plate and an adjacent row of tubes, a continuous core penetrating free flow passage of less resistance than said restricted passages under congealment conditions in which the liquid tends to congeal upon the tubes; and means defining between the aforesaid heated areas of said shell and the adjacent tubes, peripheral free flow passages of less resistance to flow than said restricted passages connecting the said core penetrating free flow passages to said inlet and outlet means respectively.

2,449,923
TIMING MODULATION SYSTEM
Earl I. Anderson, Manhasset, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 19, 1943, Serial No. 479,738
10 Claims. (Cl. 179—171.5)

1. In a system of the class described, an oscillation generator tube having a control electrode biased beyond cutoff, a condenser and a charging circuit therefor, for applying a positive potential to said control electrode to overcome the said cutoff bias, and a discharge device in shunt to said condenser for preventing a negative charge from being built up thereacross for an appreciable period of time.

2,449,924
ROTOR FOR AXIAL POLE INDUCTION MOTORS
Leonard E. Aske, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
Application April 3, 1946, Serial No. 659,217
16 Claims. (Cl. 172—278)



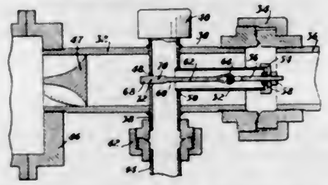
1. A disk rotor for an axial pole induction motor comprising a plurality of rotor sections each made up of a steel center having a series of radiating lobes with intermediate notches, with an enclosing concentric disk of copper or the like to accurately fit the contour of the lobes and notches, and a pair of copper end plates between which the sections are fixed, one of the plates having a series of radiating fingers bent to fit into peripheral notches in the rotor sections to tie the several sections of the rotor together.

6. A disk rotor for an axial pole induction motor comprising a plurality of rotor sections each made up of a steel center having a series of radiating lobes with intermediate notches, with an enclosing concentric disk of copper or the like to accurately fit the contour of the lobes and notches, a pair of copper end plates between which the sections are fixed, one of the plates having a series of radiating fingers bent to fit into peripheral notches in the rotor sections to tie the several sections of the rotor together, one of the plates having circular openings corresponding to each lobe of the adjacent rotor section, and steel rivets extending axially through the corresponding lobes of all the rotor sections to secure them together, each rivet having a cylindrical head projecting through the corresponding plate opening.

2,449,925
DISK TYPE ROTOR FOR AXIAL POLE INDUCTION MOTORS
Leonard E. Aske, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
Application June 25, 1946, Serial No. 679,073
9 Claims. (Cl. 172—120)

1. A disk type rotor for an axial pole induction motor comprising a plurality of rotor sections of magnetic material each made up of a series of radiating lobes separated by deep indentations, a copper sheath substantially enclosing the rotor sections, and a rivet extending through the sheath at the bottom of each indentation electrically connecting the two faces

of the sheath and firmly securing the sheath to the rotor sections, the magnetic material extend-



ing through openings in one of said faces of the sheath.

2,449,926
ESTERS OF ALCOHOL NONTERTIARY AMINES
Frank J. Cahn, Chicago, Ill., assignor to The Emulsol Corporation, Chicago, Ill., a corporation of Illinois
No Drawing. Application August 29, 1941, Serial No. 408,823
17 Claims. (Cl. 260—404)

1. A method of preparing hydrochloride salts of higher molecular weight aliphatic carboxylic acid esters of alcohol non-tertiary amines, substantially free of amides of said carboxylic acids with said amines, which comprises reacting a higher molecular weight aliphatic carboxylic acid acyl chloride and a hydrochloride of an alcohol non-tertiary amine in the presence of an acid catalyst.

2,449,927
ATOMIZER
John Checkon, Gary, Ind.
Application January 24, 1945, Serial No. 574,301
4 Claims. (Cl. 261—78)

4. An atomizer comprising a casing having an inlet for introducing atomizing fluid under pressure and an outlet, a transverse conduit entering said casing between said inlet and said outlet and having a discharge orifice within said casing directed toward said outlet for introducing fluid to be atomized, mounting means supported on said conduit aligned with said orifice and extending toward said inlet, and a stem loosely carried by said mounting means and having a free end portion of uniform diameter extending ahead through said orifice, said stem having a centered position in said orifice in which its axis is perpendicular to the plane of said orifice and when subjected to the stream of atomizing fluid vibrating freely and continuously from said centered position into contact with the orifice walls throughout the periphery of the orifice for preventing clogging of the orifice.

2,449,928
SYNTHETIC RUBBER PLASTICIZED WITH A COMPOSITION COMPOSED ESSENTIALLY OF AN AROMATIC HYDROCARBON OIL
Frank W. Corkery, Crafton, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application February 26, 1944, Serial No. 524,069
12 Claims. (Cl. 260—33.6)

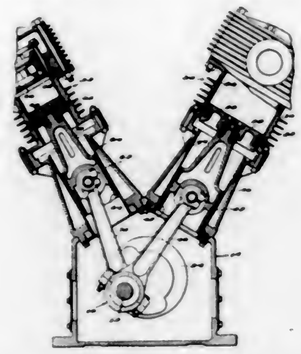
1. The method of plasticizing a synthetic rubber selected from the synthetic rubbers composed of the rubbery copolymers of butadiene and acrylic nitrile and the synthetic rubbers composed of the rubbery copolymers of butadiene and styrene by working the synthetic rubber with from 5% to 35% its weight of a liquid plasticizer composed essentially of an aromatic oil purified of contaminates and approximately free of polymers higher than dimers formed from compounds found in coke oven light oil and boiling within the approximate range of 220° C. to 350° C. which has an average aniline point no higher than 25° C. by virtue of a substantial content of at least one compound of the group responding to the formula

$$R_x\text{—}A_y\text{—}R_x$$

in which "P" is a phenyl group, "A" is an aliphatic group, "R" is selected from the group consisting of alkyl and alkenyl groups, "x" is a number up to unity and "y" is a number up to unity.

2,449,929
ELASTOMER PLASTICIZING COMPOSITION COMPOSED OF COUMARONE RESIN AND AN AROMATIC HYDROCARBON OIL
Frank W. Corkery, Crafton, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application February 26, 1944, Serial No. 524,071
6 Claims. (Cl. 260—33.6)

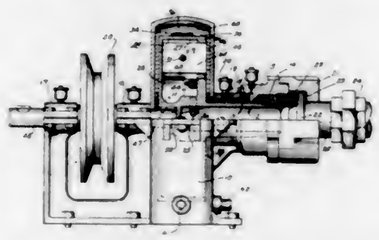
1. A plasticizing and tack-imparting blend for elastomers, composed of a tack-imparting content of coumarone-indene resin melting within the approximate range of 25° C. to 120° C., and an aromatic oil formed from other compounds found in coke oven light oil and boiling within the approximate range of 220° C. to 350° C. which has an aniline point below 25° C. by virtue of a substantial content of at least one compound of the group responding to the formula



$$R_x\text{—}A_y\text{—}R_x$$

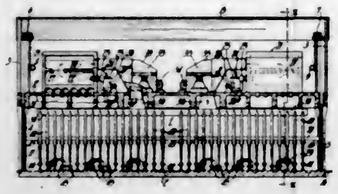
in which "P" is a phenyl group, "A" is an aliphatic group, "R" is selected from the group consisting of alkyl and alkenyl groups, "x" is a number up to unity and "y" is a number up to unity, in the blend the said aromatic oil being in a quantity adequate to give the blend an aniline point below 30° C.

2,449,930
COMPRESSOR
Paul H. Davey, Kent, Ohio
Application November 3, 1943, Serial No. 508,846
3 Claims. (Cl. 230—206)



1. A compressor wherein lubricating oil is excluded from the compression chamber comprising in combination, a cylinder, a piston mounted for reciprocating movement within said cylinder, a guide cylinder aligned with said cylinder, a guide piston movable within said guide cylinder, a carbon piston ring on said piston having

graphite embedded therein for maintaining a seal between the cylinder wall and the piston, a sleeve on said guide piston formed with carbon impregnated with graphite engaging the wall of the guide cylinder, means connecting the guide piston with the first piston, a crank shaft including a crank arm, anti-friction bearings sup-



porting the crank shaft for rotation, means sealing grease within said anti-friction bearings, a rod connecting the crank arm with said guide piston, anti-friction bearings at the ends of said connecting rod, and means for maintaining grease within the last mentioned anti-friction bearings.

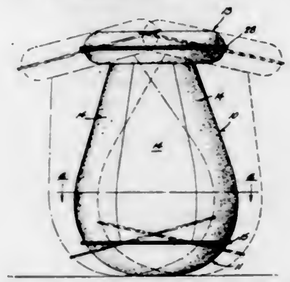
2,449,931
TURBINE
Julian Dematteis, Batavia, Iowa
Application May 16, 1946, Serial No. 670,057
5 Claims. (Cl. 253—91)

1. In a pressure medium turbine, a housing forming a closed exhaust chamber having exhaust ports, a rotor rotatably supported in the chamber and having a hollow shaft closed at one end, the rotor having an end wall and an outer circular rim carried by the wall, a rotor unit positioned in the rotor and comprising separable quarter sections, the sectional rotor units comprising inner and outer rings and each unit including end walls, each of which is in opposed relation with an end wall of an adjacent unit, said inner ring being in the form of a hollow manifold, curved hollow blades extending outwardly from the manifold between the inner and outer rings, said outer ring having outlet ports with which the hollow blades are in communication, said rim having ports in register with the outer ring ports for the discharge of pressure medium from the blades into the exhaust chamber, means coupling said rotor unit sections together, means for conducting pressure medium from within the hollow shaft into the manifold, and means for taking off power from said shaft.

2,449,932
METHOD OF THAWING MATERIALS
John W. Forsythe, deceased, late of Wilkinsburg, Pa., by Mary Alice Forsythe, executrix, Wilkinsburg, Pa., and Edward J. Smotzer, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application January 24, 1945, Serial No. 574,436
1 Claim. (Cl. 34—30)

A method of thawing frozen materials in railroad cars comprising subjecting a car situated in an enclosed thawing chamber to a plurality of blasts of a gaseous blend of air and products of combustion at a temperature of 500° to 750° F., continuously removing the blast gases from the chamber, blending a portion of the gases thus removed with additional air and products of combustion, continuously recirculating the resulting blend of gases to the blasts at this temperature for 5 to 15 minutes; and thereafter subjecting the car to a plurality of similarly constituted blasts at a temperature of 200° to 250° F. for a period of 5 to 20 minutes.

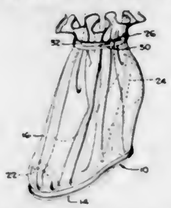
2,449,933
METHOD OF MAKING PHOSPHORUS- AND SULFUR-CONTAINING ORGANIC REACTION PRODUCTS
John J. Giammaria, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application November 27, 1943, Serial No. 512,036
16 Claims. (Cl. 260—139)



1. In the method of producing a phosphorus- and sulfur-containing organic reaction product which comprises reacting a halogenated aliphatic hydrocarbon having at least 18 carbon atoms with a phosphorus sulfide at an elevated temperature between about 125° C. and about 250° C. for a period of time to achieve the highest sulfur and phosphorus contents in said organic reaction product; the improvement which includes reacting said halogenated aliphatic hydrocarbon with said phosphorus sulfide at an elevated temperature in the presence of a Friedel-Crafts catalyst and for a period of time appreciably less than that required when the reaction is effected in the absence of a Friedel-Crafts catalyst.

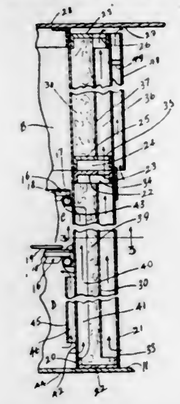
6. As a new composition of matter, a phosphorus- and sulfur-containing organic reaction product obtained by reacting a halogenated aliphatic hydrocarbon having at least 18 carbon atoms with a phosphorus sulfide at an elevated temperature between about 125° C. and about 250° C. for a period of time between about 4 and about 7 hours in the presence of a Friedel-Crafts catalyst.

2,449,934
MINERAL OIL COMPOSITION
John J. Giammaria, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application August 8, 1945, Serial No. 609,719
14 Claims. (Cl. 252—46.6)



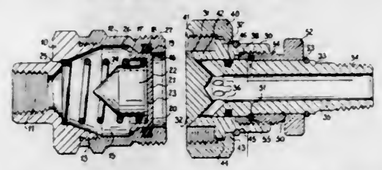
1. An improved mineral oil composition comprising a viscous mineral oil fraction having in admixture therewith a minor proportion, sufficient to inhibit said oil fraction against the deleterious effects of oxidation, of an oil-soluble, acidic, phosphorus- and sulfur-containing reaction product obtained by: reacting an alkyl halide and a phosphorus sulfide in the presence of a Friedel-Crafts catalyst at an elevated temperature between about 125° C. and about 250° C.; and separating said acidic reaction product so formed from the reaction mixture obtained in the reaction.

2,449,935
TOY FOOTBALL DUMMY
Martin John Gilman, Gilman, Conn.
Application December 10, 1947, Serial No. 790,867
4 Claims. (Cl. 273—55)



1. An inflatable toy simulating a football dummy comprising a body portion of substantially frusto-conical shape, having a rounded bottom, said body portion formed of inflatable material, weighted means connected to and following the contour of the rounded bottom for normally maintaining the body in an upright position.

2,449,936
FOOT WRAPPER
Frances K. Glasgow, Long Beach, Calif., assignor of forty per cent to Hamer H. Jamieson, Los Angeles, Calif.
Application July 11, 1947, Serial No. 760,346
2 Claims. (Cl. 36—7.1)



2. An overshoe comprising a sole member having a relatively flat, water impervious sole member of a size and configuration in plan substantially conforming to the bottom of a shoe, means extending upwardly from said sole member for engaging a shoe and securing said sole member to the shoe, an upper member of light, flexible, moisture resistant material secured to said sole member so as to extend upwardly from said sole member over said securing means and over the shoe and arranged to be gathered about the ankle of the wearer, and means for fastening the gathered material about the ankle of the wearer.

2,449,937
ROTARY COOKER
Richard Groetchen, Chicago, Ill.
Application October 30, 1944, Serial No. 560,982
3 Claims. (Cl. 126—273)

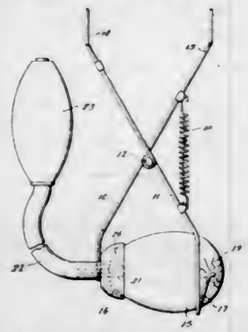
1. A cooker comprising a housing, a burner element arranged in said housing, said housing including a wall structure comprising inner and outer wall plates arranged in spaced relation with respect to each other and a top wall providing together with said wall structure an outlet at the upper portion of said housing, a partition arranged between said wall plates, one of said wall plates having openings at the lower end thereof communicating with passages provided by said one of said wall plates and said partition, the upper ends of the passages communicating with the outlet beneath the top wall of said housing, a packing arranged between the inner wall and said partition and having passages formed therein communicating with the interior of said housing at the lower interior portion thereof and at a point below said burner element.

2,449,938
COUPLING
Fred E. Hansen, Lakewood, Ohio
Application August 2, 1946, Serial No. 688,016
3 Claims. (Cl. 284—19)

1. In a coupling of the character described, a female member, a male member in two parts comprising a sleeve having a valve seat and a valve having a hollow stem slidable in said sleeve, a coupling nut rotatable on one of said members and adapted to be threadably connected with the

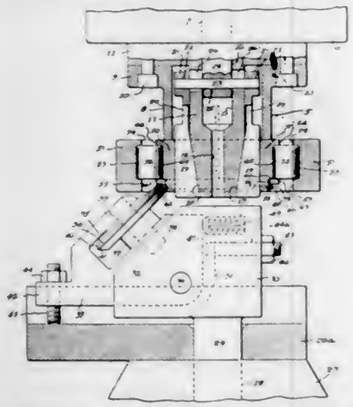
other member for coupling or uncoupling said members, a second valve in said female member spring pressed toward closed position, said second valve being engaged by the valve part of said male member when said coupling members are operatively connected, and a collar rotatably mounted on said stem and threadably connected with said sleeve for moving the stem relative to the sleeve to open the first named valve and through it the second valve to establish flow through the connected coupling.

2,449,939
WRITING INSTRUMENT
Francis Heyberger, Old Greenwich, Conn.
Application November 14, 1947, Serial No. 786,007
9 Claims. (Cl. 120—42.12)



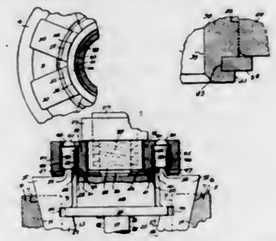
1. In a ball point pen, a tubular member, a beveled end portion forming a closure for said member, said portion being formed with a plurality of inclined sides each provided with a hole extending perpendicularly thereto and communicating with the interior of said member, the axes of said holes being skew with respect to one another and to the axis of said member, a plurality of ball-carrying tip portions each press-fitted into a respective one of said apertures and having their ball-carrying ends projecting from said end portion, and a plurality of tubes extending within said tubular member and connected to the other ends of respective tip portions, each of said tip portions having a channel communicating with the interior of a respective tube whereby ink from said tube may reach the ball-carrying end of the tip portion.

2,449,940
ORGANO-DI-SILOXANES AND METHODS OF MAKING THEM
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application December 16, 1944, Serial No. 568,557
11 Claims. (Cl. 260—448.2)



1. In the process of preparing new synthetic compositions from mono-silanes having three mono-valent hydrocarbon radicals attached to each silicon atom through carbon-silicon linkages, the remaining valence of each silicon atom being satisfied by a hydrolyzable radical selected from the class consisting of halogen and alkoxy radicals, the steps comprising mixing two of said silanes, which differ from each other with respect to the chemical composition of that portion of their molecules exclusive of said hydrolyzable radicals, hydrolyzing the mixture, intercondensing the hydrolysis products and recovering therefrom the unsymmetrical organo-disiloxane.

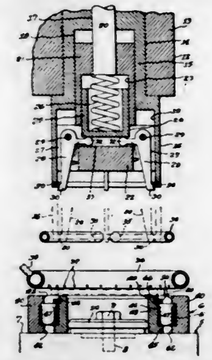
2,449,941
EGGSHELL REMOVER
Donald Jauhiainen, Iron River, Mich.
Application April 25, 1947, Serial No. 743,932
1 Claim. (Cl. 146—2)



An egg shell remover comprising tongs, shell-breaking prongs formed integrally with one tong member, a hollow egg-piercing spear carried by the other tong member, a resilient bulb, a tube interconnecting the bulb and the spear, a cup-shaped member of flexible material surrounding the spear and having a radially inwardly extending flexible flap adapted to engage with an egg shell whereby to prevent the escape of air from the cup-shaped member.

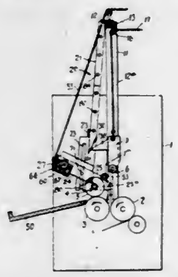
2,449,942
METHOD OF MAKING ANTIFRICTION BEARING ASSEMBLIES
Glen F. Johnson, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan
Application April 25, 1945, Serial No. 590,282
4 Claims. (Cl. 29—148.4)

1. A method of making anti-friction bearing assemblies having concentrically arranged inner and outer race members with anti-friction bearing elements disposed therebetween, comprising forming the end portion of one of said race members with a land surface and an annular recess in close relation thereto, fitting said land surface with a continuous locking ring having a portion extending over said annular recess, rotating said bearing assembly and locking ring, and finally moving a spinning tool into contactual engagement with said locking ring and spinning the portion thereof extending over said recess into said recess by cold working and permanently set within the annular recess.



2,449,943
METHOD OF MAKING ANTIFRICTION BEARINGS
Glen F. Johnson, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan
Application April 25, 1945, Serial No. 590,283
4 Claims. (Cl. 29—148.4)

1. A method of assembling bearing units having inner and outer race members arranged concentrically in spaced relation for receiving anti-friction bearing members therebetween, comprising removing the metal adjacent the end of one of said race members to provide an annular groove therein, forming a locking ring of radially-elongated cross-section and with outer and inner diameters of dimensions adapted to slide between said race members, moving said locking ring through the space between said race members into registry with the groove in said race member, and finally exerting a ring-deforming pressure radially on one edge of said ring to deform said ring edgewise into said groove.

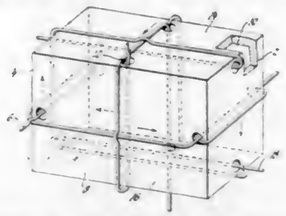


2,449,944
METHOD OF ASSEMBLING ROLLER BEARINGS AND LOCK RINGS THEREFOR
Glen F. Johnson, Detroit, Mich., assignor to Bower Roller Bearing Company, Detroit, Mich., a corporation of Michigan
Application April 25, 1945, Serial No. 590,284
3 Claims. (Cl. 29—148.4)

1. A method of assembling a continuous annular retaining ring of thermally-expansible material in mating relationship with a correspondingly configured recess in one of the race members of an anti-friction bearing unit, comprising forming said recess and the mating surface of said retaining ring with diametral dimensions which are substantially equal at substantially the same room temperature, moving said ring into an electrical induction heating zone spaced away from said race members, thermally expanding said ring in said induction heating zone by heating said ring to a predetermined temperature at which said ring will expand sufficiently to clear the recessed race member, moving the thus-heated and expanded ring out of said heating zone and relatively to the recessed race member into registry with said recess, and cooling said ring while holding said ring in such registry whereby to shrink said

ring into seating and mating engagement with said recess.

2,449,945
APPARATUS FOR HANDLING ROLLS OF FLEXIBLE SHEET MATERIAL
Arthur T. Lewis, Toronto, Ontario, Canada
Application February 13, 1945, Serial No. 577,686
17 Claims. (Cl. 242—66)

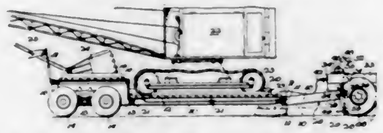


1. Roll handling apparatus for flexible sheet material winding machines, comprising means for rotatably supporting a spindle; means for rotating the spindle to wind the sheet material thereabout; means for feeding sheet material to the spindle; a suspension member; supporting means on which the suspension member is pivoted; a lever member pivotally mounted on the lower end of the suspension member and adapted to engage the spindle; and means for swinging the suspension member and lever member away from the spindle supporting means to eject the spindle from the spindle supporting means after the sheet material has been wound on the spindle.

2,449,946
METHOD AND MEANS FOR DEMAGNETIZING
Edward J. Martin, Pleasant Ridge, and Wayne T. Sproull, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 18, 1944, Serial No. 554,576
4 Claims. (Cl. 175—181)

2. In means for effecting a time average demagnetization, separate means for creating three separate magnetic fields oriented in three mutually perpendicular planes, a source of D. C.

power, and switching means interconnecting the source and magnetizing means to sequentially



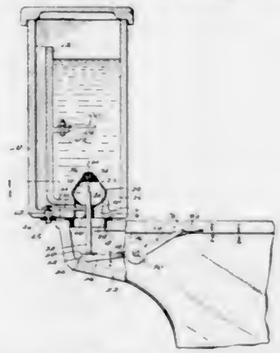
connect each of the separate magnetizing means and to reverse the polarity after each sequence.

2,449,947

HEAVY DUTY TRAILER AND TRACTOR LIFTING UNIT

Robert L. Meadows, Arlington, Va.

Application January 18, 1946, Serial No. 641,905
6 Claims. (Cl. 214—86)



1. A heavy duty trailer having a flat platform and pairs of tandem wheels at the rear end; a reinforced tongue composed of heavy conveying beams projecting from the front end and bent to lie flat on the ground when the front is lowered for loading; a guide socket in the front end of the tongue having hitching means for connecting the trailer to a towing truck; power lifting means on the truck for raising the trailer to its towing position; and a hitch pin shaped to be guided into said socket and removably secured to said tongue.

2,449,948

FLUSH TANK MECHANISM

John S. Milne, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York

Application July 12, 1944, Serial No. 544,488
10 Claims. (Cl. 4—13)

1. A water closet flushing mechanism comprising a bowl, a flush tank mounted thereon and communicating by gravity therewith, a valve for controlling the gravity flow of water from said tank to said bowl, and a trip lever rotatively mounted on said bowl and having an arm within said bowl for opening said valve and a handle outside said bowl for actuation by hand or foot.

2,449,949

HYDROGENATED LINEAR POLYMERS AND COPOLYMERS OF BRANCH-CHAIN HEXADIENES

Rupert C. Morris and John L. Van Winkle, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application September 4, 1944, Serial No. 552,712
4 Claims. (Cl. 260—74)

4. A clear, transparent hydrogenation product of a linear copolymer of (1) a mixture of 85% 2-methyl-1,3-pentadiene and 15% 4-methyl-1,3-pentadiene with (2) not more than 25% of a compound selected from the group consisting of styrene, alpha-methyl styrene, dichlorostyrene, and 1,3-butadiene, said copolymer having a molecular weight between 50,000 and 500,000.

2,449,950

CONNECTOR FOR BELTS

Ernest Nassimbene, Denver, Colo., assignor to Gates Rubber Company, Denver, Colo., a corporation of Colorado

Application February 13, 1945, Serial No. 577,706
1 Claim. (Cl. 24—31)

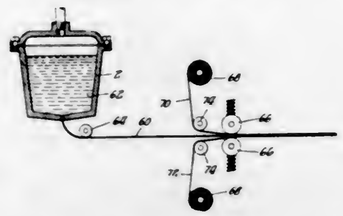
A connection for power transmission belts having a transverse layer of tension-resisting elements, comprising, a link positioned between the ends of the belt, at least one of the ends of the link facing the ends of the belt, having a transverse angular groove having opposed sides, one side of which has a key way groove extending the length thereof, a groove engaging anchoring lug attached to one end of the tension layer, said lug having substantially the same cross sectional size and shape as the groove, the side of the lug facing the side of the angular groove having the key way groove, having a corresponding key way groove, and a key positioned in the opposed key way grooves for resisting tensional forces tending to separate the lug from the link.

2,449,951

STABILIZED HEAT POLYMERIZABLE N-VINYL PYRROLE COMPOSITIONS

William O. Ney, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application February 3, 1945, Serial No. 576,155
6 Claims. (Cl. 260—315)



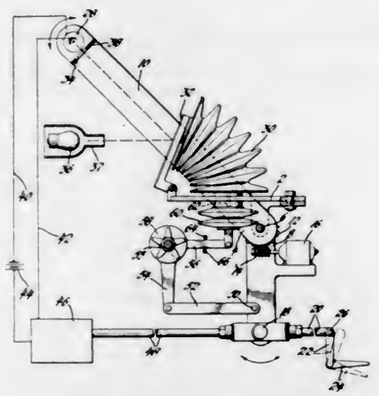
1. As a heat polymerizable N-vinyl pyrrole composition which is stabilized to polymerization in the molten state at temperatures slightly above its melting point but which may be readily polymerized by heating at temperatures above 100° C., a heat polymerizable monomeric N-vinyl pyrrole compound having a melting point below 100° C. containing an effective amount, up to 5 percent, of a compound selected from the group consisting of formamide, acetamide and acetoacetanilide to stabilize said N-vinyl pyrrole compound at temperatures slightly above its melting point.

2,449,952

METHOD OF MANUFACTURING CONDENSERS

Edwin S. Pridham, Oakland, Calif., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware

Application December 26, 1942, Serial No. 470,184
8 Claims. (Cl. 49—81)



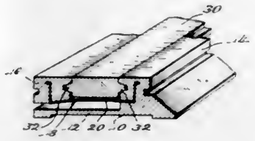
1. The method of making a static condenser which comprises drawing a thin viscous sheet of dielectric material from a melt composed mostly of titanium dioxide, contacting said viscous sheet on either side with conducting electrodes of determined area to form a condenser of definite capacity.

2,449,953

PRESSURE RESPONSIVE AUTOMATIC CONTROL

Edward V. Rippingille, Farmington, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application April 9, 1947, Serial No. 740,504
7 Claims. (Cl. 318—481)



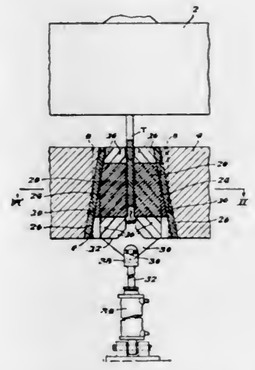
7. A pressure responsive device including a base plate, a mirror pivotally attached to said plate, a toroidal section shaped pressure sensitive element positioned between said mirror and said plate, a light source and a light receiving means located in such spaced relation with said mirror that said last mentioned means may receive light energy from said source when reflected from said mirror, a variable volume gas container attached to the plate's side opposite said pressure responsive element, a port between said chamber and said last mentioned element, means for varying the volume of said chamber to introduce a change in pressure in said element to accentuate the movement of said mirror.

2,449,954

SLIDE RULE

Ingham S. Roberts, Ridley Park, Pa.

Application March 26, 1945, Serial No. 584,813
11 Claims. (Cl. 235—70)



1. A slide rule comprising a slide and a fixed scale member which comprises a base portion with a fixed guideway formed thereon for one side of the slide, a movable guideway for the opposite side of the slide, said base portion extending beneath the movable guideway, and a flexible resilient support extending from the fixed guideway and carrying the movable guideway normally spaced above the base and normally in frictional engagement with the slide, whereby flexure of said support toward the base swings said movable guideway away from the fixed guideway, releasing the slide for free movement between them.

2,449,955

GRIP MECHANISM FOR TESTING MACHINES

Robert I. Sanderson, Gary, and Eugene R. Trostle, East Gary, Ind.

Application January 9, 1947, Serial No. 721,014
4 Claims. (Cl. 73—103)

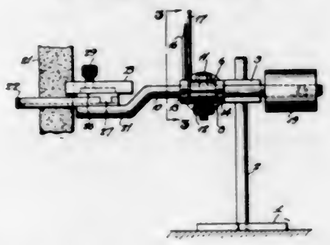
1. Grip mechanism for the test piece in a tensile testing machine comprising a pair of opposed jaws, one on each side of the center line of the test piece, a gripping surface on each jaw, a wedge surface on each jaw on the side opposite the gripping surface, corresponding wedge surfaces on said machine, a sliding plate mounted in said machine along one side of both of the jaws, each of the jaws having teeth therein on the end adjacent the sliding plate, the teeth in each jaw extending at an angle from its wedge surface toward the plane of its gripping surface, the sliding plate having teeth therein meshing with the teeth in the jaws, and means for moving said sliding plate in a plane parallel to the axis of the workpiece.

2,449,956

DIALKYLCYCLOHEXYL GLYCOLS AND CERTAIN DERIVATIVES THEREOF

Edward C. Shokal, Oakland, and Rupert C. Morris, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application July 9, 1945, Serial No. 604,104
6 Claims. (Cl. 260—488)



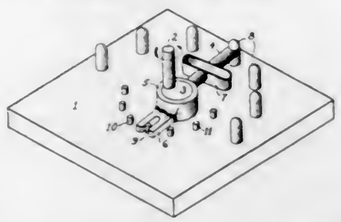
5. A compound from the group consisting of the 3,5-dialkylcyclohexyl glycols wherein the dialkylcyclohexyl group is directly attached to a carbon atom bearing one of the hydroxyl groups and wherein the two hydroxyl groups are in the 1,3-position relative to each other on carbon atoms in a side chain of at least four carbon atoms, their carboxylic acid esters, and their ethers.

2,449,957

CUTTER BIT GRINDING JIG

Hugh Smiley, Jr., Henniker, N. H.

Application September 16, 1946, Serial No. 697,312
4 Claims. (Cl. 51—238)



1. In a work-support for use with a grinding wheel, the combination with a stand having a vertically adjustable arm, and a head rotatably adjustable in the arm, of a longitudinally adjustable bar rotatably mounted in the head and means for clamping the head and bar in adjusted position, and a work-holder mounted on the bar in position for adjustment above and below the horizontal transverse axis of the wheel.

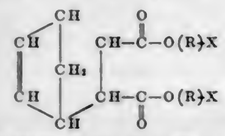
2,449,958

MECHANISM FOR CONVERTING ROTARY MOTION INTO APPROXIMATELY HYPOCYCLOIDAL MOTION

Francis A. Snell, Chenango Forks, N. Y.

Application March 19, 1946, Serial No. 655,403
3 Claims. (Cl. 74—112)

1. In a device of the character described, the combination of an eccentric, a member driven by the eccentric, and a plurality of guide means disposed at equal angular intervals in circular arcs about the eccentric and adapted to engage opposite extremities of the driven member in alternation and to advance said member from one guide means to the next during one revolution of the eccentric.



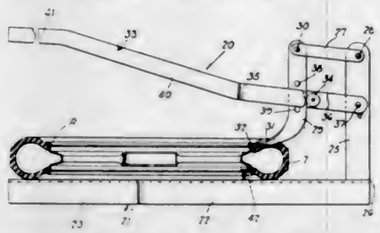
2,449,959

VINYLIDENE CHLORIDE RESIN PLASTICIZED WITH A DI-ESTER OF ENDO-METHYLENE TETRA-HYDRO PHTHALIC ACID

Hanns Peter Staudinger, Ewell, Donald Faulkner, Cambridge, and George Thomas Wright, Manchester, England, assignors to The Distillers Company Limited, Edinburgh, Scotland, a British company

No Drawing. Application January 2, 1945, Serial No. 571,110. In Great Britain December 8, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 8, 1963
6 Claims. (Cl. 260—31.8)

1. A composition of matter comprising a vinylidene chloride resin and from 1% to 30% by weight of the said resin of an organic di-ester of endo-methylene-tetrahydrophthalic acid of the formula



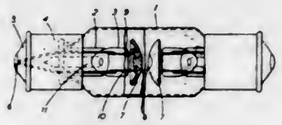
wherein the esterifying radicles R are the same and are selected from the group consisting of alkyl, alkenyl, aralkyl and alkynyl radicles, and wherein X is selected from the group consisting of hydrogen and halogen.

2,449,960

LEVER OPERATED AXIALLY SHIFTING TIRE REMOVING DEVICE

Louis A. Toles, Ridgeville Corners, Ohio

Application May 3, 1945, Serial No. 591,647
1 Claim. (Cl. 157—1.26)



A tire tool comprising a platform, said platform being of sufficient length to support a tire and wheel assembly thereon, a standard extending upwardly from the platform, a handle having a bifurcated portion pivoted on said standard, a link pivoted to the upper end of said standard in spaced relation to said handle, a dog pivoted to and depending from the forward end of said link, passing through said bifurcated portion of the handle and having its lower end extending outwardly to form an elongated spoon to engage the upper edge of the rim of said tire, a roller in the bifurcated portion of said handle adapted to slidably contact the rear edge of said dog, pins extending outwardly of said dog adapted to contact the lower and upper edges of said handle when said handle is raised and lowered to remove the tire from said wheel.

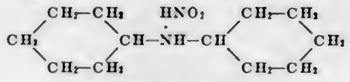
2,449,961

ELECTRICAL PROTECTIVE DEVICE

Harold Robert Treece and Ralph Alan Wilkinson, Preston, England, assignors to Siemens Electric Lamps and Supplies Limited, Preston, England

Application April 17, 1944, Serial No. 531,400
In Great Britain May 27, 1943
5 Claims. (Cl. 250—27.5)

1. An electrical protective device comprising an envelope, a filling of inert gas therein, two spaced electrodes of iron of convex shape connected to terminals on opposite ends of the device and having the convex sides adjacent, and an aluminum insert in the face of each said electrode at their points of nearest approach.



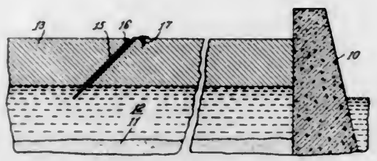
2,449,962

DICYCLOHEXYLAMMONIUM NITRITE AND ITS PREPARATION

Aaron Wachter and Nathan Stillman, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application March 26, 1946, Serial No. 657,352
4 Claims. (Cl. 260—563)

1. Dicyclohexylammonium nitrite having the structural formula

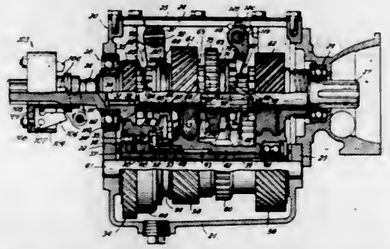


2,449,963

METHOD AND MEANS FOR PROTECTING SHORE AND OTHER STRUCTURES AGAINST DAMAGE BY ICE

Clayton N. Ward, Madison, Wis.

Application October 24, 1946, Serial No. 705,401
17 Claims. (Cl. 61—1)



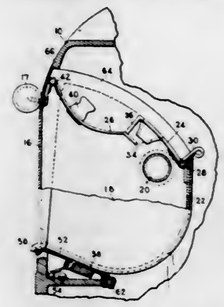
1. The method of protecting a structure in contact with the surface portion of a body of water against damage by expansion of a sheet of ice upon said water, which comprises creating a slot in said ice sheet extending across in front of the portion of said structure to be protected and downwardly in an inclined direction, and placing in said slot a substance exhibiting toward said ice a coefficient of friction substantially less than the coefficient of internal friction of said ice.

2,449,964

AUTOMATIC CHANGE-SPEED TRANSMISSION

Oscar H. Banker, Chicago, Ill., assignor to New Products Corporation, Chicago, Ill., a corporation of Delaware

Application September 19, 1940, Serial No. 357,388
32 Claims. (Cl. 74—336)

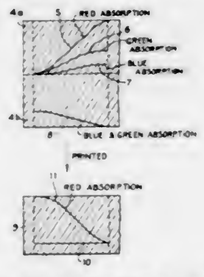


1. A change-speed transmission comprising coaxial drive and driven shafts, a countershaft, an overrunning power train drivingly disposed between the driven shaft and the countershaft, a plurality of power trains of different speed transmitting capabilities alternatively establishable between the drive shaft and the countershaft for operation in series with said drivingly disposed power train between the drive and driven shafts, the lower speed of said plurality of power trains including an overrunning clutch device in series therewith, the other of said plurality of power trains including a freely rotatable member disposed coaxially of the drive shaft, a clutch operable to connect said freely rotatable member with the drive shaft for establishing said other of the plurality of trains, and a second clutch operable to connect the freely rotatable member with the driven shaft.

2,449,965

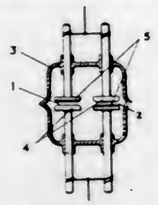
ASH RECEPTACLE FOR ARMRESTS OF VEHICLE SEATS

Alfred B. Bell, Philadelphia, Pa., assignor to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts



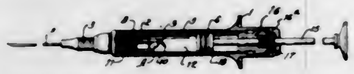
Application November 2, 1946, Serial No. 707,498
4 Claims. (Cl. 155—188)

2. An ash receptacle for a hollow arm rest of a vehicle seat or the like, comprising a box housed in said arm rest and pivotally mounted for rocking movement outward from its housed position, closure means in said box below the top thereof to form a shallow open receptacle to receive cigar ashes and the like when the box is rocked outward from its housed position, said closure means comprising two flaps hinged to



the box and rockable inward from a normal position to discharge matter thereon into the lower portion of the box, and spring means tending to rock said flaps outward, one of said flaps having its free end overlapping the free end of the other flap and having an upstanding fin arranged to engage a wall portion of the box to prevent upward rocking movement of said one flap beyond its normal position, said arm rest having a wall portion directly above the front of the box forming a lip behind which said fin engages when the box is rocked outward to limit the extent of such outward rocking movement, said pivotal connection between the box and arm rest being yielding to permit the box to be pushed down to clear the fin from the lip so that the box can be swung further outward.

2,449,966
INTEGRAL MASK FOR COLOR FILM
Wesley T. Hanson, Jr., Knoxville, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 3, 1944, Serial No. 533,910
7 Claims. (Cl. 95—2)

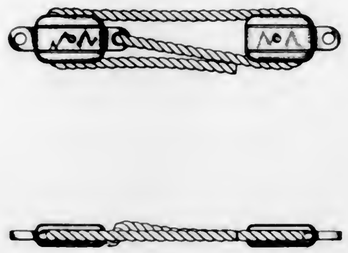


1. The method of forming a color corrected image in a photographic element having superposed silver halide emulsion layers sensitive to different regions of the visible spectrum, at least one of said layers containing a colored color coupler for color-forming development having a chromophore-containing group in the position in the coupler which is reactive with the oxidation product of a primary aromatic amino developing agent, said chromophore-containing group being split off with simultaneous conversion of the residual group of the colored coupler to coupled dye by color development to form a dye image which absorbs a major proportion of light in the spectral region of one of the primary colors and a minor proportion of light in at least one other region of the visible spectrum, said colored coupler absorbing light in at least one of said minor absorption regions but absorbing no substantial amount of light in said major absorption region, which comprises exposing said layers to light and developing at least said layer containing said colored coupler by color development with a primary aromatic amino developing agent, said color development resulting in splitting off the chromophore-containing group of said colored coupler where said dye image is formed by coupling, leaving in the undeveloped regions of said one layer colored coupler absorbing light in said minor absorption region of said dye image.

2,449,967
SPARK GAP
Frank Llewellyn Jones, Millbank, London, England, assignor to Minister of Supply, in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England
Application May 9, 1945, Serial No. 592,843
In Great Britain May 10, 1944
5 Claims. (Cl. 250—27.5)

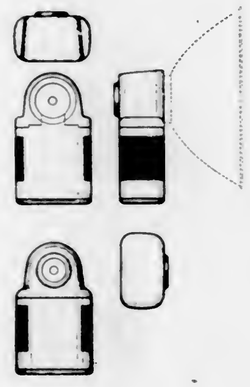
1. A spark gap of the type referred to for operation on pulses of electromotive force of alternate polarity comprising two plate electrodes disposed parallel to one another in an envelope containing gas, said electrodes providing two polarity sensitive conducting paths for the electrical impulses between said two parallel plate electrodes, one path being sensitive to electrical impulses of one polarity and the other path sensitive to electrical impulses of the opposite polarity, the sparking potential of both paths being substantially equal.

2,449,968
HYPODERMIC SYRINGE
Arthur E. Smith, Los Angeles, Calif.
Application December 31, 1946, Serial No. 719,360
1 Claim. (Cl. 128—215)



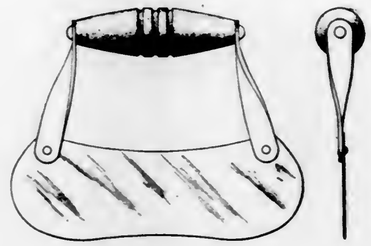
An ampule for a hypodermic syringe comprising a tube, a plastic thimble-shaped insert mountable within one end of the tube to provide therein an open-end chamber, the outer surface of said insert being slightly conical to adapt the insert to variations in the inner diameter of the tube, a plastic solvent for softening the outer surface of the insert to provide a fluid-tight bond between the insert and the inner wall of the tube, the bottom of the insert having a thin frangible margin, a soft compressible closure for said chamber, and a soft compressible closure for the opposite end of the tube.

DESIGNS



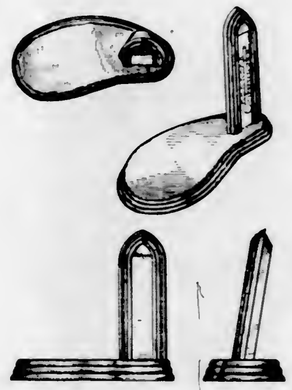
SEPTEMBER 21, 1948

151,024
DESIGN FOR A JEWELRY COMPONENT
Charles du B. Arcularius, New Canaan, Conn.
Application January 2, 1947, Serial No. 135,900
Term of patent 14 years
(Cl. D45—1)



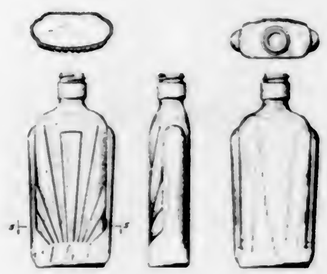
The ornamental design for a jewelry component, substantially as shown.

151,025
DESIGN FOR A FLASH LAMP HOLDER
John W. Barnes, Ann Arbor, Mich., assignor to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Term of patent 14 years
(Cl. D48—24)



The ornamental design for a flash lamp holder, as shown and described.

151,026
DESIGN FOR A FOOD MINCER
Mario A. Besozzi, Beechhurst, N. Y.
Application October 18, 1946, Serial No. 134,039
Term of patent 3½ years
(Cl. D44—29)

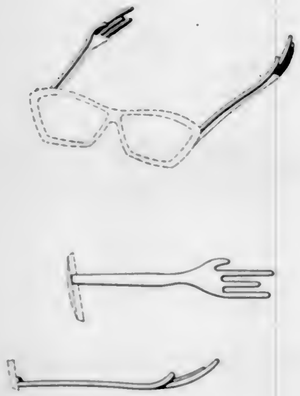


The ornamental design for a food mincer, substantially as shown.

151,027
DESIGN FOR A THERMOMETER
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,441
Term of patent 14 years
(Cl. D52—7)

The ornamental design for a thermometer, as shown and described.

151,028
DESIGN FOR A BOTTLE
William Blitzstein, Chicago, Ill., assignor to Sunset, Incorporated, Chicago, Ill., a corporation of Illinois
Application November 18, 1946, Serial No. 134,843
Term of patent 14 years
(Cl. D58—8)

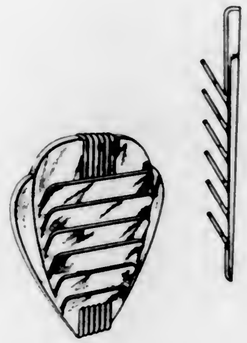


The ornamental design for a bottle, as shown.

151,029
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,367
Term of patent 3½ years
(Cl. D45—19)

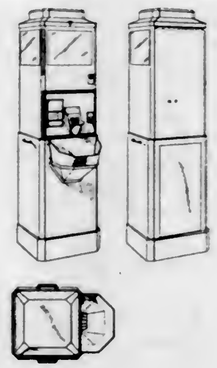
The ornamental design for a brooch or similar article, as shown.

151,030
DESIGN FOR A SPECTACLE FRAME OR SIMILAR ARTICLE
Nadja Buckley, New York, N. Y.
Application September 4, 1947, Serial No. 141,197
Term of patent 7 years
(Cl. D57—1)



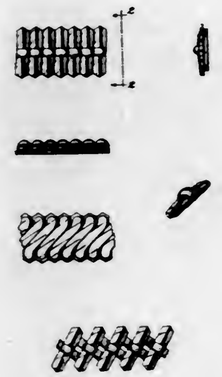
The ornamental design for a spectacle frame or similar article, substantially as shown and described.

151,031
DESIGN FOR A BROOCH OR THE LIKE
Augustus Casciano, Providence, R. I., assignor to R. M. Jordan & Company, Inc., a corporation of Rhode Island
Application December 31, 1947, Serial No. 143,469
Term of patent 3½ years
(Cl. D45—19)



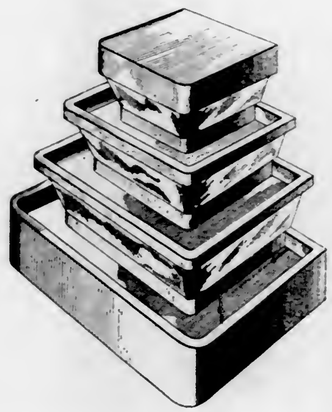
The ornamental design for a brooch or the like, substantially as shown.

151,032
DESIGN FOR A COMB HOLDER
Herbert E. Dahlen, Portland, Oreg.
Application April 3, 1947, Serial No. 138,137
Term of patent 3½ years
(Cl. D86—10)



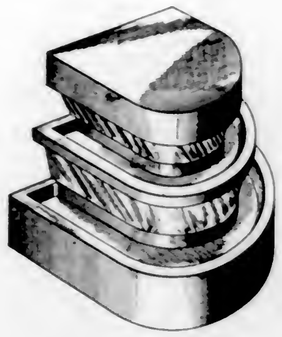
The ornamental design for a comb holder, as shown.

151,033
DESIGN FOR A POPCORN DISPENSING MACHINE
Frank P. Emerson, Los Angeles, Calif.
Application April 19, 1946, Serial No. 128,780
Term of patent 14 years
(Cl. D52—3)



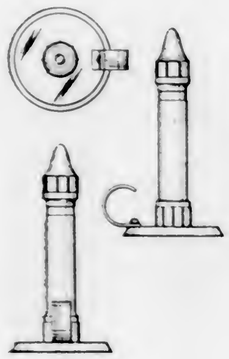
The ornamental design for a popcorn dispensing machine, substantially as shown.

151,034
DESIGN FOR AN EXPANSIBLE LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Emil E. Fachon, Edgewood, R. I., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application August 14, 1947, Serial No. 140,856
Term of patent 7 years
(Cl. D45—4)



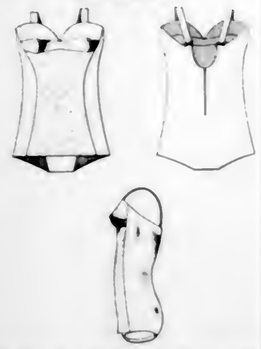
The ornamental design for an expansible link chain for a bracelet or similar article as shown.

151,035
DESIGN FOR A FROZEN FOOD STORAGE AND DISPLAY CABINET
Jacob W. P. Fleming, Memphis, Tenn.
Application April 15, 1947, Serial No. 138,402
Term of patent 14 years
(Cl. D80—11)



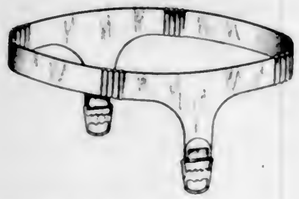
The ornamental design for a frozen food storage and display cabinet, as shown.

151,036
DESIGN FOR A FROZEN FOOD STORAGE AND DISPLAY CABINET
Jacob W. P. Fleming, Memphis, Tenn.
Application April 15, 1947, Serial No. 138,403
Term of patent 14 years
(Cl. D80—11)



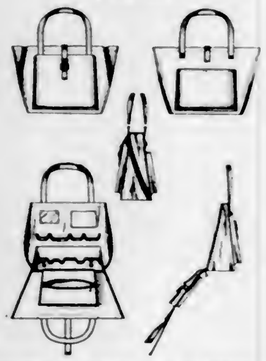
The ornamental design for a frozen food storage and display cabinet, as shown.

151,037
DESIGN FOR A LAMP
Joseph Frank, Forest Hills, and Sidney R. Geist, New York, N. Y., assignors to Gemloid Corporation, Elmhurst, Long Island, N. Y., a corporation of New York
Application April 19, 1946, Serial No. 128,791
Term of patent 3½ years
(Cl. D48—20)



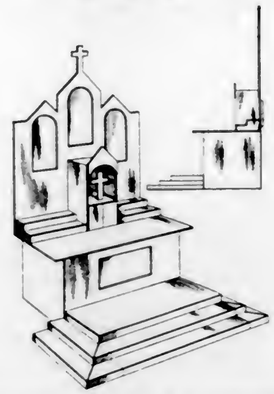
The ornamental design for a lamp, substantially as shown.

151,038
DESIGN FOR A SWIMMING SUIT
John O. Gantner, Jr., San Francisco, Calif.
Application February 24, 1947, Serial No. 137,100
Term of patent 14 years
(Cl. D3—17)



The ornamental design for a swimming suit, as shown and described.

151,039
DESIGN FOR A SUPPORTING BELT
Julius J. Goldstein, New York, N. Y.
Application July 5, 1947, Serial No. 140,112
Term of patent 7 years
(Cl. D3—10)

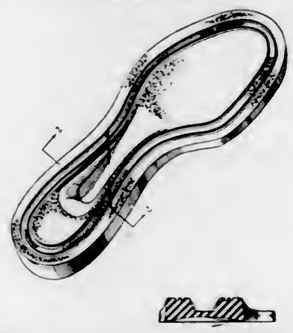


The ornamental design for a supporting belt, substantially as shown.

151,040
DESIGN FOR A BEACH BAG
Elizabeth N. Graham, New York, N. Y.
Application December 26, 1947, Serial No. 143,359
Term of patent 14 years
(Cl. D87—3)

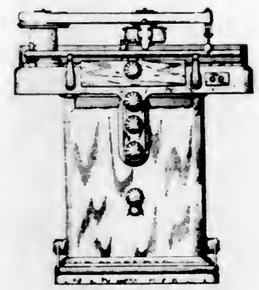
The ornamental design for a beach bag, substantially as shown.

151,041
DESIGN FOR A PORTABLE ALTAR
Rudolph T. Gudell, North Chicago, and George A. Feeny, Chicago, Ill.
Application May 14, 1947, Serial No. 139,036
Term of patent 14 years
(Cl. D29—23)

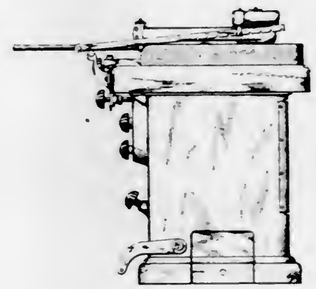


The ornamental design for a portable altar, as shown.

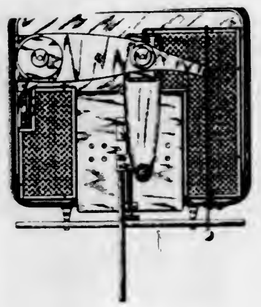
151,042
DESIGN FOR A BINDING STRIP FOR SHOE SOLES
Raymond B. Harrison, Dover, N. H.
Application November 17, 1945, Serial No. 123,848
Term of patent 14 years
(Cl. D7—6)



The ornamental design for a binding strip for shoe soles, substantially as shown and described.

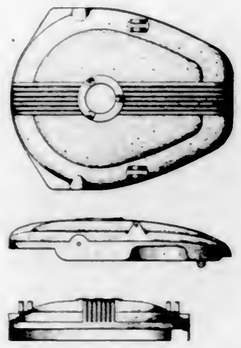


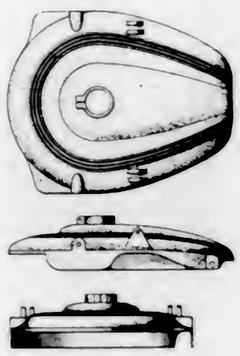
151,043
DESIGN FOR A SHOE SOLE OR SIMILAR ARTICLE
Flavius B. Hubbard, Auburn, Maine, assignor to Webster Rubber Company, Sabattus, Maine, a corporation of Maine
Application June 8, 1948, Serial No. 146,832
Term of patent 14 years
(Cl. D7—5)



The ornamental design for a shoe sole or similar article, substantially as shown.

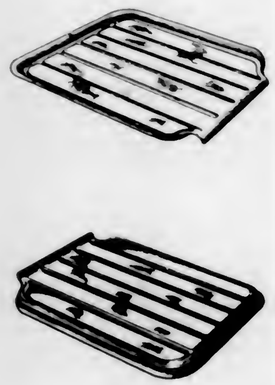
151,044
DESIGN FOR A ROUTING MACHINE
William F. Huck, Forest Hills, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application July 5, 1947, Serial No. 140,107
Term of patent 14 years
(Cl. D93—2)





The ornamental design for a routing machine, as shown and described.

151,045
DESIGN FOR A ROTARY MOWER HOUSING
William H. Huff, Kansas City, Kans.
Application May 23, 1947, Serial No. 139,221
Term of patent 7 years
(Cl. D40—1)

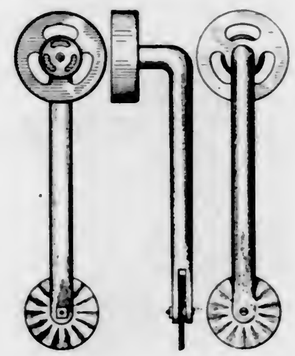


The ornamental design for a rotary mower housing, substantially as shown.

151,046
DESIGN FOR A ROTARY MOWER HOUSING
William H. Huff, Kansas City, Kans.
Application May 23, 1947, Serial No. 139,222
Term of patent 7 years
(Cl. D40—1)

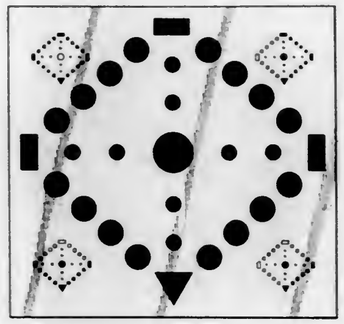
The ornamental design for a rotary mower housing, substantially as shown.

151,047
DESIGN FOR A COMBINED PORTABLE DRAINBOARD, SERVING TRAY, AND COOLING RACK
Donald G. Jensen, Cincinnati, Ohio, assignor to The Cincinnati Iron Fence Company-Save-a-Sink, Cincinnati, Ohio, a joint enterprise
Application February 17, 1947, Serial No. 136,948
Term of patent 14 years
(Cl. D4—2)



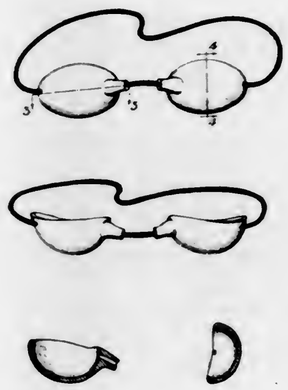
The ornamental design for a combined portable drainboard, serving tray, and cooling rack, substantially as shown and described.

151,048
DESIGN FOR A DISPLAY DISPENSER
Russell G. Jones, Reading, Mass., assignor to William B. Berry Company, Boston, Mass., a corporation of Massachusetts
Application November 22, 1946, Serial No. 135,020
Term of patent 7 years
(Cl. D52—3)



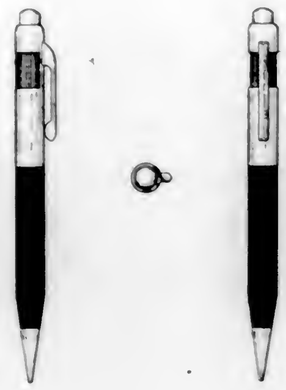
The ornamental design for a display dispenser, substantially as shown and described.

151,049
DESIGN FOR A COMBINED BISCUIT, DOUGHNUT, AND PASTRY CUTTER
Earl J. Kilgore, Evarts, Ky.
Application April 19, 1946, Serial No. 128,790
Term of patent 3½ years
(Cl. D44—29)



The ornamental design for a combined biscuit, doughnut, and pastry cutter, as shown.

151,050
DESIGN FOR A GAME BOARD
Don L. Kreider, Wadsworth, Ohio
Application March 17, 1947, Serial No. 137,672
Term of patent 7 years
(Cl. D34—5)

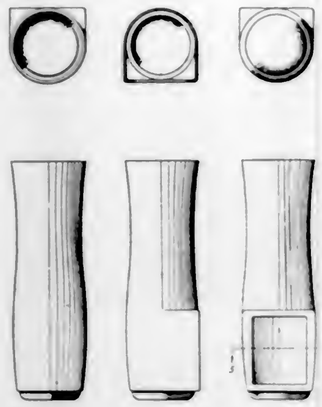


The ornamental design for a game board, as shown and described.

151,051
DESIGN FOR A PAIR OF EYESHIELD CUPS FOR SUN BATHING
Orton William Lindgren, Jr., Reading, Pa., assignor to Willson Products, Inc., Reading, Pa., a corporation of Pennsylvania
Application September 4, 1946, Serial No. 133,051
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a pair of eyeshield cups for sun bathing, as shown and described.

151,052
DESIGN FOR A MECHANICAL PENCIL
Sylvester G. Lipic, Sappington, Mo.
Application May 12, 1947, Serial No. 138,990
Term of patent 14 years
(Cl. D74—24)



The ornamental design for a mechanical pencil, as shown.

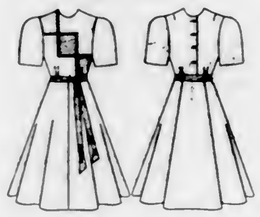
151,053
DESIGN FOR A LIGHT SHADE FOR AN ELECTRICAL FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application November 2, 1946, Serial No. 134,474
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a light shade for an electrical fixture, substantially as shown.

151,054
DESIGN FOR A LIGHT SHADE FOR AN ELECTRICAL FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application November 29, 1946, Serial No. 135,151
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a light shade for an electrical fixture, substantially as shown.

151,055
DESIGN FOR A CHENILLE ROBE
George H. McLaughlin, New York, N. Y.
Application February 14, 1948, Serial No. 144,497
Term of patent 7 years
(Cl. D3—26)

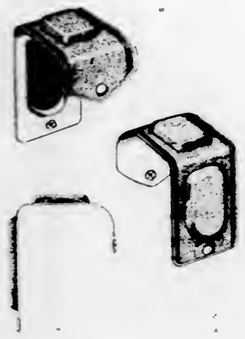


The ornamental design for a chenille robe, substantially as shown and described.

151,056
DESIGN FOR A CHENILLE ROBE
George H. McLaughlin, New York, N. Y.
Application February 14, 1948, Serial No. 144,498
Term of patent 7 years
(Cl. D3—26)

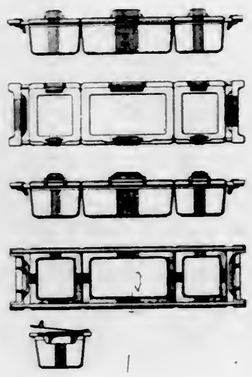
The ornamental design for a chenille robe, substantially as shown and described.

151,057
DESIGN FOR A DRESS
Mildred Macpherson, New York, N. Y.
Application January 13, 1948, Serial No. 143,705
Term of patent 3½ years
(Cl. D3—26)



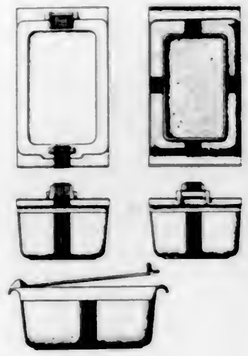
The ornamental design for a dress, substantially as shown.

151,058
DESIGN FOR A DRESS
Mildred Macpherson, New York, N. Y.
Application January 13, 1948, Serial No. 143,706
Term of patent 3½ years
(Cl. D3—26)



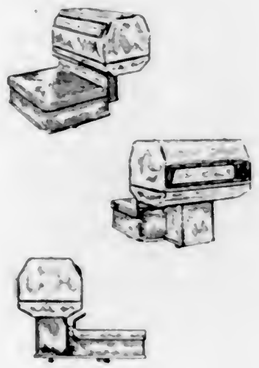
The ornamental design for a dress, substantially as shown.

151,059
DESIGN FOR A CAMERA COVER
Charles E. Main, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application October 4, 1946, Serial No. 133,768
Term of patent 14 years
(Cl. D61—1)



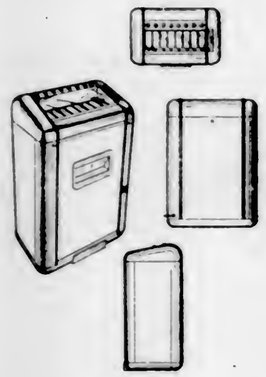
The ornamental design for camera cover, as shown.

151,060
DESIGN FOR A TOILET TRAY
Zebinia E. Marvin, Jr., Dallas, Tex.
Application April 15, 1947, Serial No. 138,422
Term of patent 3½ years
(Cl. D86—10)



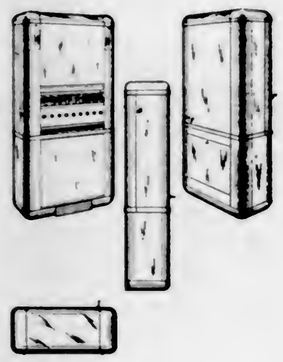
The ornamental design for a toilet tray, as shown.

151,061
DESIGN FOR A UTILITY BOX
Zebinia E. Marvin, Jr., Dallas, Tex.
Application August 25, 1947, Serial No. 141,063
Term of patent 3½ years
(Cl. D86—10)



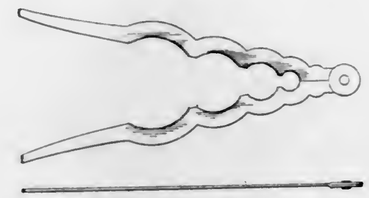
The ornamental design for a utility box, as shown.

151,062
DESIGN FOR A SCALE
David A. Meeker, Troy, and Kenneth C. Allen, Dayton, Ohio, assignors to The Hobart Manufacturing Company, Troy, Ohio, a corporation of Ohio
Application June 7, 1946, Serial No. 130,492
Term of patent 14 years
(Cl. D52—10)



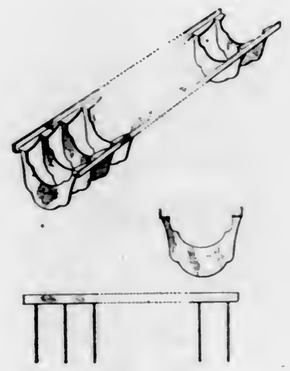
The ornamental design for a scale, substantially as shown and described.

151,063
DESIGN FOR A CANDY VENDING MACHINE
Walter E. Moore, St. Louis County, Mo., assignor to National Vendors Inc., St. Louis, Mo., a corporation of Missouri
Application November 25, 1946, Serial No. 135,070
Term of patent 14 years
(Cl. D52—3)



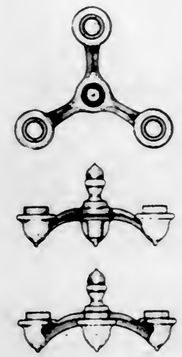
The ornamental design for a candy vending machine, substantially as shown.

151,064
DESIGN FOR A CIGARETTE VENDING MACHINE
Walter E. Moore, St. Louis County, Mo., assignor to National Vendors Inc., St. Louis, Mo., a corporation of Missouri
Application November 29, 1946, Serial No. 135,176
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a cigarette vending machine, substantially as shown.

151,065
DESIGN FOR A FRUIT JAR AND BOTTLE OPENER
Henry L. Nichols, Los Angeles, Calif.
Application May 3, 1946, Serial No. 129,283
Term of patent 14 years
(Cl. D44—29)



The ornamental design for a fruit jar and bottle opener, as shown.

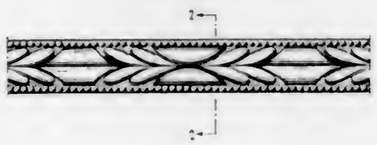
151,066
DESIGN FOR A DIFFUSING SHIELD FOR A TUBULAR LAMP
Richard O'Connell, New York, N. Y., assignor to The Roc Industrial Corp., New York, N. Y., a corporation of New York
Application April 26, 1947, Serial No. 138,637
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a diffusing shield for a tubular lamp, substantially as shown and described.

151,067
DESIGN FOR A CANDELABRUM OR SIMILAR ARTICLE
Wilbur L. Orme, Cambridge, Ohio
Application September 19, 1947, Serial No. 141,489
Term of patent 14 years
(Cl. D48—2)

The ornamental design for a candelabrum or similar article, substantially as shown.

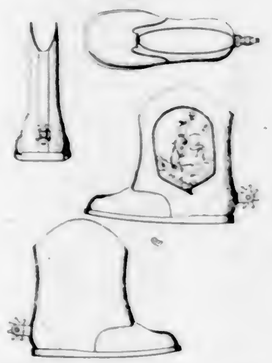
151,068
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,592
Term of patent 7 years
(Cl. D45—16)



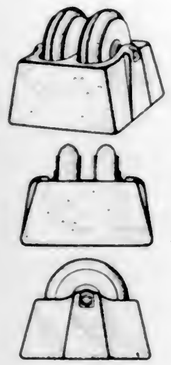
The ornamental design for a necklace or similar article, substantially as shown and described.

151,069
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,905
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.



151,070
DESIGN FOR OPHTHALMIC WIRE
William A. Rohman, Attleboro, Mass.
Application November 21, 1946, Serial No. 134,976
Term of patent 14 years
(Cl. D57—1)



The ornamental design for ophthalmic wire, as shown.

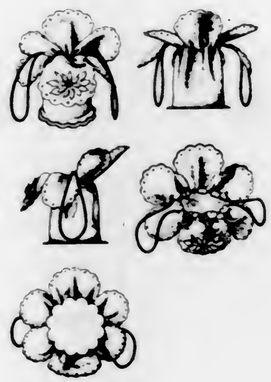
151,071
DESIGN FOR A CHILD'S BOOT OR SIMILAR ARTICLE
Henri E. Rosen, Brookline, Mass.
Application March 25, 1947, Serial No. 137,857
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a child's boot or similar article, substantially as shown and described.

151,072
DESIGN FOR A HOG OILER
George J. Saffert, New Ulm, Minn.
Application November 8, 1945, Serial No. 123,579
Term of patent 3½ years
(Cl. D12—2)

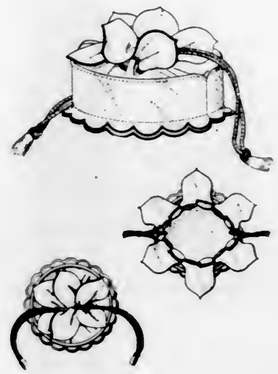
The ornamental design for a hog oiler, as shown.

151,073
DESIGN FOR A FLOOR MAINTENANCE MACHINE
Joseph Sassano, Yonkers, N. Y.
Application December 30, 1947, Serial No. 143,434
Term of patent 14 years
(Cl. D37—1)



The ornamental design for a floor maintenance machine, substantially as shown.

151,074
DESIGN FOR A HEAT INSULATED STORAGE RECEPTACLE
Louis M. Schnitzer, Brooklyn, N. Y., assignor to Everlast Metal Products Corp., a corporation of New York
Application January 20, 1947, Serial No. 136,254
Term of patent 14 years
(Cl. D44—8)



The ornamental design for a heat insulated storage receptacle, as shown and described.

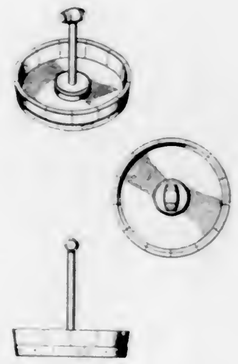
151,075
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Dorris M. Scott and Evelyn Steinberg, Los Angeles, Calif., assignors to Anita-Gay Creations, Inc., Los Angeles, Calif., a corporation of California
Application December 29, 1947, Serial No. 143,394
Term of patent 14 years
(Cl. D87—3)

The ornamental design for a handbag or similar article, as shown.

151,076
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Dorris M. Scott and Evelyn Steinberg, Los Angeles, Calif., assignors to Anita-Gay Creations, Inc., Los Angeles, Calif., a corporation of California
Application May 19, 1948, Serial No. 146,456
Term of patent 14 years
(Cl. D87—3)

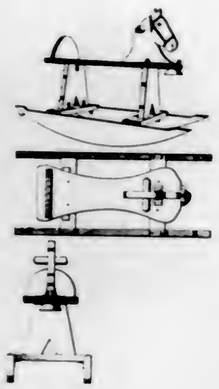
The ornamental design for a handbag or similar article, as shown and described.

151,077
DESIGN FOR A BAKING IRON GRID
Minnie Severson, Mapleton, and Delilah Kraske, Waseca, Minn.
Application May 23, 1947, Serial No. 139,224
Term of patent 14 years
(Cl. D81—26)



The ornamental design for a baking iron grid, as shown.

151,078
DESIGN FOR A BAKING IRON GRID
Minnie Severson, Mapleton, and Delilah Kraske, Waseca, Minn.
Application May 23, 1947, Serial No. 139,225
Term of patent 14 years
(Cl. D81—26)

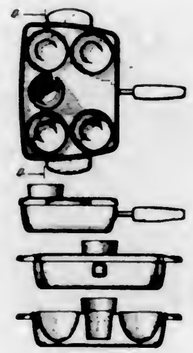


The ornamental design for a baking iron grid, as shown.

151,079
DESIGN FOR A SERVING TRAY
Victor Sherry and Harry A. Plocky, Los Angeles, and Gustave F. Plocky, South Pasadena, Calif.
Application June 24, 1946, Serial No. 130,996
Term of patent 7 years
(Cl. D44—14)

The ornamental design for a serving tray, as shown.

151,080
DESIGN FOR A HOBBYHORSE
George St. John, Ironwood, Mich.
Application April 3, 1947, Serial No. 138,143
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a hobbyhorse, as shown.

151,081
DESIGN FOR A LINK BRACELET
Irving Stern and Hyman Stern, Brooklyn, N. Y.
Application February 20, 1948, Serial No. 144,636
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a link bracelet, as shown and described.

151,082
DESIGN FOR A FOOD WARMER AND SERVER
Clifford Brooks Stevens, Milwaukee, Wis., assignor to William P. Howlett, Chicago, Ill.
Application September 25, 1946, Serial No. 133,544
Term of patent 7 years
(Cl. D44—1)

The ornamental design for a food warmer and server, substantially as shown.

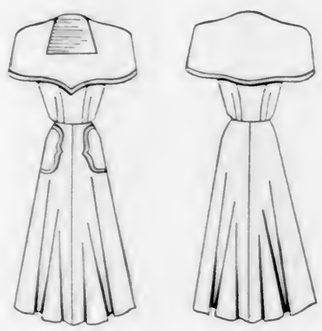
151,083
DESIGN FOR A COAT
John F. Strassner, New York, N. Y.
Application January 13, 1948, Serial No. 143,712
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a coat, substantially as shown.

151,084
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,347
Term of patent 3½ years
(Cl. D3—26)

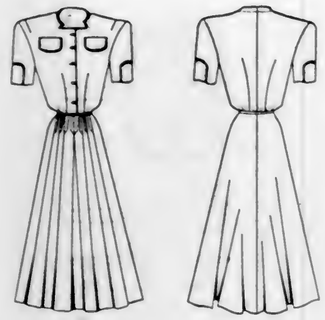
The ornamental design for a dress, substantially as shown.

151,085
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,350
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

151,086
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,351
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

151,087
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,352
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,088
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,353
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,089
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,354
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,090
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,355
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,091
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,360
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,092
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,361
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

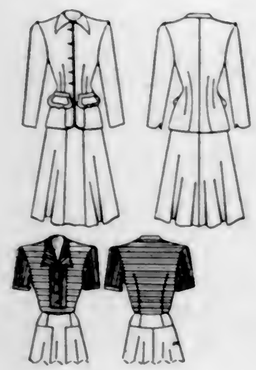
151,093
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,363
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,094
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,749
Term of patent 3½ years
(Cl. D3—26)

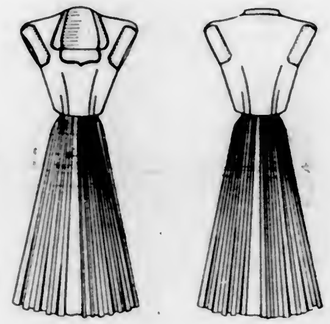
The ornamental design for a dress, substantially as shown.

151,095
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,750
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress, substantially as shown.

151,096
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,752
Term of patent 3½ years
(Cl. D3—26)

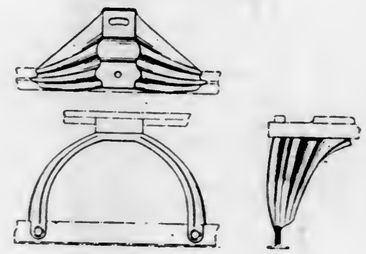


The ornamental design for a dress, substantially as shown.

151,097
DESIGN FOR A DRESS ENSEMBLE
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,756
Term of patent 3½ years
(Cl. D3—26)

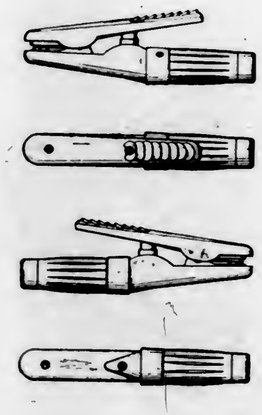
The ornamental design for a dress ensemble, substantially as shown.

151,098
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,349
Term of patent 3½ years
(Cl. D3—26)



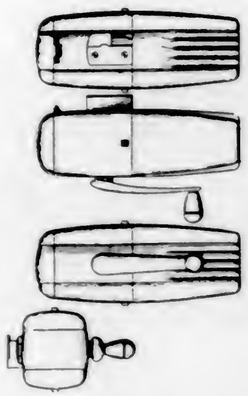
The ornamental design for a dress, substantially as shown.

151,099
DESIGN FOR A BOOTEE
Kate R. Strauss, New York, N. Y., assignor to Famous Bathrobe Co., Inc., New York, N. Y., a corporation of New York
Application May 5, 1947, Serial No. 138,820
Term of patent 14 years
(Cl. D7—7)



The ornamental design for a bootee, as shown.

151,100
DESIGN FOR A SLED KNEE
Carl W. Sundberg, Birmingham, Mich., assignor to Pratt Manufacturing Company, Coldwater, Mich., a copartnership
Application June 27, 1946, Serial No. 131,069
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a sled knee, as shown and described.

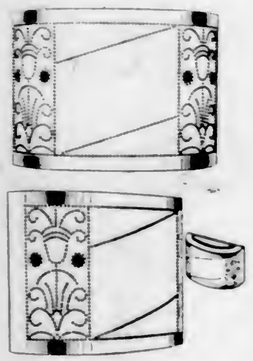
151,101
DESIGN FOR A WELDING ELECTRODE HOLDER
Clifford W. Taber, Pasadena, Calif.
Application September 2, 1947, Serial No. 141,169
Term of patent 3½ years
(Cl. D26—1)

The ornamental design for a welding electrode holder, as shown.

151,102
DESIGN FOR AN ICE CRUSHER
Henry J. Talge, Kansas City, Mo., and Albert M. Travis, Kansas City, Kans.
Application June 27, 1947, Serial No. 139,954
Term of patent 14 years
(Cl. D89—1)

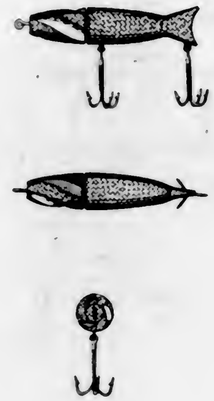
The ornamental design for an ice crusher, substantially as shown.

151,103
DESIGN FOR A FRUIT JUICER
Henry J. Talge and Elton F. Whitfill, Kansas City, Mo., assignors to John C. Hockery, Kansas City, Mo., as trustee
Application May 5, 1948, Serial No. 146,194
Term of patent 14 years
(Cl. D89—1)



The ornamental design for a fruit juicer, substantially as shown.

151,104
DESIGN FOR A DRESS
Victor Tomshinsky, New York, N. Y.
Application June 25, 1948, Serial No. 147,175
Term of patent 3½ years
(Cl. D3—26)

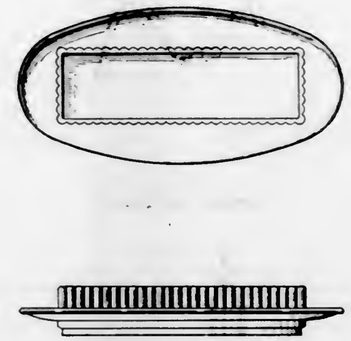


The ornamental design for a dress, substantially as shown.

151,105
DESIGN FOR A DISPLAY SIGN
Erwin C. Uihlein, Grafton, Wis., assignor to Jos. Schlitz Brewing Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 13, 1946, Serial No. 127,437
Term of patent 14 years
(Cl. D1—12)

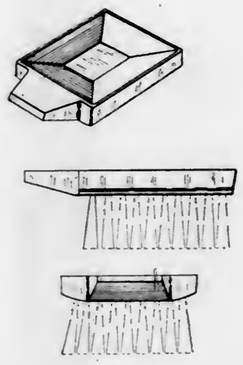
The ornamental design for a display sign, as shown and described.

151,106
DESIGN FOR A FISH LURE
Ray A. Vaughn, Cheboygan, Mich.
Application April 19, 1946, Serial No. 128,777
Term of patent 3½ years
(Cl. D31—4)



The ornamental design for a fish lure, substantially as shown and described.

151,107
DESIGN FOR A FISH LURE
Ray A. Vaughn, Cheboygan, Mich.
Application April 19, 1946, Serial No. 128,778
Term of patent 3½ years
(Cl. D31—4)

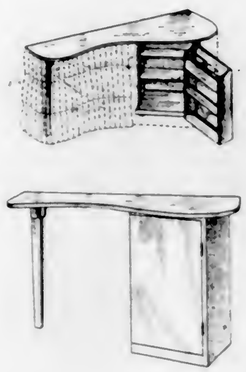


The ornamental design for a fish lure, substantially as shown and described.

151,108
DESIGN FOR A CRACKER TRAY
John W. Verduyn and Lewis M. Mason, Long Beach, Calif.; said Mason assignor to said Verduyn
Application February 24, 1947, Serial No. 137,140
Term of patent 14 years
(Cl. D44—14)

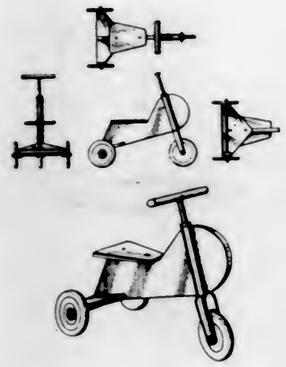
The ornamental design for a cracker tray, as shown.

151,109
DESIGN FOR A MILITARY BRUSH
Franz Wagner, Chicago, Ill., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 14, 1946, Serial No. 133,949
Term of patent 3½ years
(Cl. D86—10)



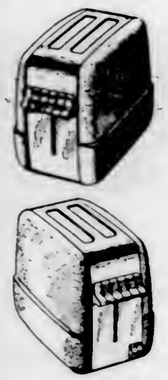
The ornamental design for a military brush, substantially as shown and described.

151,110
DESIGN FOR A BICYCLE FRAME
William H. Walker, Glendale, Calif., assignor to American Brazed Products, Los Angeles, Calif., a corporation of California
Application June 28, 1946, Serial No. 131,122
Term of patent 7 years
(Cl. D90—8)



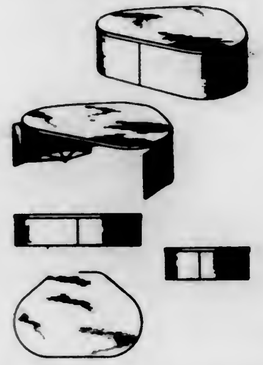
The ornamental design for a bicycle frame, as shown.

151,111
DESIGN FOR A TABLE, DESK, OR SIMILAR ARTICLE
Edwin Westlake, New York, N. Y., assignor to A. B. A. Specialties, Incorporated, New York, N. Y., a corporation of New York
Application August 8, 1946, Serial No. 132,365
Term of patent 14 years
(Cl. D33—7)



The ornamental design for a table, desk, or similar article, substantially as shown and described.

151,112
DESIGN FOR A VEHICLE TOY
Lambert A. Wise, Pittsburgh, Pa.
Application January 10, 1947, Serial No. 136,047
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a vehicle toy, as shown.

151,113
DESIGN FOR A TOASTER
Paul Yaeger, New York, N. Y., assignor to Valiant Appliances, Inc., New York, N. Y., a corporation of New York
Application August 6, 1947, Serial No. 140,737
Term of patent 14 years
(Cl. D81—10)

The ornamental design for a toaster, as shown.

151,114
DESIGN FOR AN AIRPLANE HANGAR
Dwen R. Younger, San Francisco, Calif.
Application May 23, 1947, Serial No. 139,233
Term of patent 14 years
(Cl. D13—1)

The ornamental design for an airplane hangar, substantially as shown.

151,115
DESIGN FOR A CHILD'S COMBINED FOOD WARMER AND SERVICE PLATE
Richard E. Zipser, New York, N. Y.
Application June 11, 1946, Serial No. 130,611
Term of patent 3½ years
(Cl. D44—15)

The ornamental design for a child's combined food warmer and service plate, substantially as shown.

LIST OF DESIGN PATENTEES

Barnes Manufacturing Co., assignee: *See*—
Thomassen, Amy L.
Biener, Charles W., Yakima, Wash. Table ornament. 151,116, Sept. 28.
Blevins, Albert C., assignor to Comet Battery Charger Company, Ltd., Dallas, Tex. Battery charging machine or similar article. 151,117, Sept. 28.
Borgerson, Birger J., Chicago, Ill. Traveling lawn sprinkler. 151,118, Sept. 28.
Comet Battery Charger Company, Ltd., assignee: *See*—
Blevins, Albert C.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Eames, Charles, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich. Table. 151,119, Sept. 28.
Eastern Jewelry Finding Works, Inc., assignee: *See*—
Hoeckele, Karl F.
Elsinger, Louis S., Tampa, Fla. Fishing reel. 151,120, Sept. 28.
Erickson, Clifford E., assignor to Kellogg Switchboard & Supply Company, Chicago, Ill. Telephone desk unit. 151,121, Sept. 28.
Evans Products Company, assignee: *See*—
Eames, Charles.
Firth, Harry, Toronto, Ontario, Canada. Combined tail light and end piece for motorcycle fenders. 151,122, Sept. 28.
Florence Stove Company, assignee: *See*—
Kruck, Ralph E.
Giovagnoni, Violet, New York, N. Y. Negligee. 151,123, Sept. 28.
Goodes, George, Jersey City, N. J. Lolly pop. 151,124, Sept. 28.
Gordon, Eli, and H. Sanders, Los Angeles, Calif. Perfume bottle. 151,125, Sept. 28.
Hettric Manufacturing Company, The, assignee: *See*—
Smith, William I.
Hilenski, Ferdinand A., Salem, Mass. Support for a soap tray or the like. 151,126, Sept. 28.
Hodge, G. Howard, New York, N. Y. Hat. 151,127, Sept. 28.
Hodge, G. Howard, New York, N. Y. Hat. 151,128, Sept. 28.
Hodge, G. Howard, New York, N. Y. Hat. 151,129, Sept. 28.
Hoeckele, Karl F., Newark, N. J., assignor to Eastern Jewelry Finding Works, Inc. Ear clip finding. 151,130, Sept. 28.
Hygrade Industries, Inc., assignee: *See*—
Wolanske, Raymond.
Kadleck, Lewis L., Fort Worth, Tex. Door pull. 151,131, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,132, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,133, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,134, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,135, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,136, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,137, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,138, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,139, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,140, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,141, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,142, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,143, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,144, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,145, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,146, Sept. 28.
Katz, Adolph, Providence, R. I. Brooch or similar article. 151,147, Sept. 28.
Katz, Adolph, Providence, R. I. Earring or similar article. 151,148, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,149, Sept. 28.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,150, Sept. 28.
Katz, Adolph, Providence, R. I. Separable brooch or similar article. 151,151, Sept. 28.
Katz, Adolph, Providence, R. I. Earring or similar article. 151,152, Sept. 28.
Katz, Adolph, Providence, R. I. Earring or similar article. 151,153, Sept. 28.
Katz, Adolph, Providence, R. I. Earring or similar article. 151,154, Sept. 28.
Kellogg Switchboard & Supply Company, assignee: *See*—
Erickson, Clifford E.
Koski, Olaf D., Seattle, Wash. Sun-bathing awning. 151,155, Sept. 28.
Kruck, Ralph E., Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass. Heater. 151,156, Sept. 28.
Kruck, Ralph E., Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass. Heater. 151,157, Sept. 28.
Kruck, Ralph E., Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass. Heater. 151,158, Sept. 28.
Macksoud, Alice, New York, N. Y. Negligee. 151,159, Sept. 28.
Manca, Milo J., Seattle, Wash. Fruit holder. 151,160, Sept. 28.
McCann, Clyde D., Des Moines, Iowa. Mounting bracket for an electrical fixture. 151,161, Sept. 28.
Metz, J. L., Furniture Company, assignee: *See*—
Metz, Jerome L.
Metz, Jerome L., Chicago, Ill., assignor to J. L. Metz Furniture Company, Hammond, Ind. Table. 151,162, Sept. 28.
Pennino, Oreste, New York, N. Y. Brooch or similar article. 151,163, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,164, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,165, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,165, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,166, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,167, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,168, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,169, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,170, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,171, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,172, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,173, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,174, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,175, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Clip or similar article. 151,176, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,177, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,178, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,179, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,180, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,181, Sept. 28.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,182, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,183, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,184, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,185, Sept. 28.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar article. 151,186, Sept. 28.

Price, Edward V. and V. E., Van Nuys, Calif. Stool, or similar article. 151,188, Sept. 28.
Price, Veronica E.: *See*—
Price, Edward V. and V. E.
Rausch, John T., and G. Towne, Danville, Ill. Combined stand, electric heater, and fan 151,189, Sept. 28.
Reiter, George, New York, N. Y. Coat. 151,190, Sept. 28.
Reiter, George, New York, N. Y. Suit. 151,191, Sept. 28.
Roe, Harry, Kansas City, Mo. Bottle drainer. 151,192, Sept. 28.
Sanders, Henry: *See*—
Gordon, Ell, and Sanders.
Scarne, John, Fairview, N. J. Game board. 151,193, Sept. 28.
Schultz, Benjamin, New York, N. Y. Suit. 151,194, Sept. 28.
Schultz, Benjamin, New York, N. Y. Suit. 151,195, Sept. 28.
Smith, William I., Perrysburg, assignor to The Hettrick Manufacturing Company, Toledo, Ohio. Swing end frame. 151,196, Sept. 28.
Strassner, John F., New York, N. Y. Dress ensemble. 151,197, Sept. 28.
Taylor, Robert H., Brooklyn, N. Y. Finger ring. 151,198, Sept. 28.
Thomssen, Amy L., Toledo, assignor to Barnes Manufacturing Co., Mansfield, Ohio. Tub filler with transfer unit for diverting water to shower. 151,199, Sept. 28.
Towne, George: *See*—
Rausch, John T., and Towne.
Trafari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Trifari, Krussman & Fishel, Inc.: *See*—
Philippe, Alfred.
Wescott, Harvey M., South Westport, Mass. Bowling game board. 151,200, Sept. 28.
Wescott, Harvey M., South Westport, Mass. Rack pool board. 151,201, Sept. 28.
Wolanske, Raymond, North Tonawanda, assignor to Hygrade Industries, Inc., Buffalo, N. Y. Cigarette lighter. 151,202, Sept. 28.
Wolff, Saul K., Long Beach, N. Y. Wall shelf or similar article. 151,203, Sept. 28.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 28TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

ATF Incorporated, assignee: *See*—
Thompson, Harold L., and King.
Adams, Kenneth H.: *See*—
Doelling, George L., and Adams.
Ainsworth, Harold W., Galloway, Ohio, assignor to The Jeffrey Manufacturing Company. Electric control circuit. 2,450,216, Sept. 28.
Aircraft Hydraulics, Inc., assignee: *See*—
Berger, Alexandre.
Aircraft-Marine Products, Inc., assignee: *See*—
Macy, James C.
Air Reduction Company, Incorporated, assignee: *See*—
Heindbrink, Jay A.
Albert, Daniel A., Richmond Hill, N. Y. Film tensioning holder for fluid processing. 2,450,178, Sept. 28.
Alcorn, Harvey A., Adair, Iowa. Teat draining tube. 2,450,217, Sept. 28.
Alexander, Peter P., assignor to Metal Hydrides Incorporated, Beverly, Mass. Method of producing lithium hydride and hydrides of other alkali metals. 2,450,266, Sept. 28.
All American Aviation, Inc., assignee: *See*—
Cotton, Robert B.
Allen, Francis P., Beaumont, Tex. Beverage device. 2,450,177, Sept. 28.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Frudden, Conrad E.
Pickslay, William M.
Aluminium Plant & Vessel Company Limited, The, assignee: *See*—
Ralph, Sydney J., and Dummett.
American Cyanamid Company, assignee: *See*—
Dixon, James K., and May.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Robbins, David S.
Scott, William H.
American Viscose Corporation, assignee: *See*—
Stanley, Richard W., and Castellan.
Anchor Chemical Company Limited, The, assignee: *See*—
Roberts, Kenneth C.
Anderson, James W., Jr., assignor to Monarch Governor Company, Detroit, Mich. Rear view mirror. 2,450,179, Sept. 28.
Andrews, Joseph F., New York, N. Y. Apparatus for reducing noise in microphone circuits. 2,449,971, Sept. 28.
Angel, Charles M., and R. A. Culbertson, Huntington, W. Va., assignors to Nathan Manufacturing Company, New York, N. Y. Water gauge. 2,450,267, Sept. 28.
Anish, Alfred W., Vestal, assignor to General Aniline & Film Corporation, New York, N. Y. Photographic emulsions containing trinuclear iminol cyanine dyes. 2,450,390, Sept. 28.
Armstrong Cork Company, assignee: *See*—
Weber, Karl H., and Powers.
Ashburn, Harry V.: *See*—
Bergmann, Eric A., Ashburn, and Eckert.
Puryear, Oney P., and Ashburn.
Ashburn, Harry V., Glenham, and O. P. Puryear, Fishkill, assignors to The Texas Company, New York, N. Y. Texture-stable lithium base grease. 2,450,219, Sept. 28.
Ashburn, Harry V., Glenham, and O. P. Puryear, Fishkill, assignors to The Texas Company, New York, N. Y. Texture-stable lithium base grease. 2,450,220, Sept. 28.
Ashburn, Harry V., Glenham, R. S. Barnett, Beacon, and O. P. Puryear, Fishkill, assignors to The Texas Company, New York, N. Y. Shear-resistant grease. 2,450,221, Sept. 28.
Ashburn, Harry V., Glenham, R. S. Barnett, Beacon, and O. P. Puryear, Fishkill, assignors to The Texas Company, New York, N. Y. Shear-resistant grease. 2,450,222, Sept. 28.
Atlas Powder Company, assignee: *See*—
Brown, Kenneth R.
Hales, Ralph A.
Atwood, Edwin H.: *See*—
Payne, John W., Valas, Atwood, and Bergstrom.
Austin, Frank, Long Beach, Calif. Sucker rod backoff wheel. 2,450,103, Sept. 28.
Avila, Frank W., Fort Wayne, Ind., assignor to International Harvester Company. Multiple-speed axle. 2,450,073, Sept. 28.
Bailey Meter Company, assignee: *See*—
Wise, Frederic E.
Bamford, William P.: *See*—
Pearse, John P., and Bamford.
Barber, Harry J., Gidea Park, assignor to May & Baker Limited, Dagenham, England. Method of making amino-substituted acridines. 2,450,367, Sept. 28.
Barbour, William R., Atlanta, Ga. Well reaming apparatus. 2,450,223, Sept. 28.
Barnes Motor Developments Company, assignee: *See*—
Barnes, William B.
Barnes, William B., assignor to Barnes Motor Developments Company, Muncie, Ind. Clutch operating mechanism. 2,450,391, Sept. 28.
Barnett, Robert S.: *See*—
Ashburn, Harry V., Barnett, and Puryear.
Bartholomew, Robert J., assignor to Fletcher Works Incorporated, Philadelphia, Pa. Bobbin lifter. 2,450,074, Sept. 28.
Barton, Loy E., Collingswood, N. J., assignor to Radio Corporation of America. Electroacoustical transducer. 2,450,104, Sept. 28.
Bashara, Laurence A., Portage Township, St. Joseph County, Ind. Burr-cutting tool. 2,450,075, Sept. 28.
Batchelder, George W., Mantua, and A. W. Hawkins, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Process for obtaining nitrogen tetroxide. 2,450,105, Sept. 28.
Baxter, Berry A., Altadena, Calif. Filter and demother. 2,450,368, Sept. 28.
Bazley, Carl E., Schenectady, N. Y., assignor to General Electric Company. Circuit breaker. 2,450,268, Sept. 28.
Beach, Robin, Brooklyn, N. Y. Elimination of static electricity. 2,449,972, Sept. 28.
Bechberger, Paul F., Tenafly, assignor to Bendix Aviation Corporation, Bendix, N. J. Cabin pressure control. 2,450,076, Sept. 28.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Mason, Warren P.
Bellis, Alexander, Shelton, Conn. Means for connecting cord springs to attachment plug caps. 2,450,369, Sept. 28.
Bemis Bro. Bag Company, assignee: *See*—
Bemis, Farwell G., and Pierce.
Bemis, Farwell G., Brookline, Mass., and R. E. Pierce, Seattle, Wash., assignors to Bemis Bro. Bag Company, St. Louis, Mo. Pivoted lug conveyer. 2,450,106, Sept. 28.
Bendix Aviation Corporation, assignee: *See*—
Bechberger, Paul F.
Buxton, James E.
Emerson, John F.
Fisher, Delbert P.
Gleasman, Vernon E.
Jordan, Benjamin H.
Miller, Donald L.
Price, Earl R.
Stenberg, Thornton R.
Wirth, Emil O., and Leibing.
Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Eaton, Wilfred A.
Berger, Alexandre, New York, N. Y., assignor to Aircraft Hydraulics, Inc. Accumulator. 2,450,031, Sept. 28.
Berger, George E. and J. A., Two Rivers, Wis. Interchangeable toy. 2,450,326, Sept. 28.
Berger, Julia A.: *See*—
Berger, George E. and J. A.
Bergman, Charles P., Brooklyn, N. Y., assignor to Rockwell Manufacturing Company. Fluid meter. 2,449,973, Sept. 28.
Bergman, Charles P., deceased, Brooklyn, N. Y.; W. V. Elliott, administrator, assignor to Rockwell Manufacturing Company, Pittsburgh, Pa. Rotary fluid meter. 2,449,974, Sept. 28.
Bergmann, Eric A., Fishkill, N. Y., H. V. Ashburn, Waynesburg, Pa., and G. W. Eckert, Glenham, assignors to The Texas Company, New York, N. Y. Method of preparation of barium soap greases. 2,450,224, Sept. 28.
Bernabó, Cayetano, Buenos Aires, Argentina. Dropper. 2,450,225, Sept. 28.
Berstrom, Eric V.: *See*—
Payne, John W., Valas, Atwood, and Bergstrom.
Beth, Hugo W. H., assignor to Norton Company, Worcester, Mass. Pulpstone. 2,450,226, Sept. 28.
Beth, Hugo W. H., assignor to Norton Company, Worcester, Mass. Pulpstone. 2,450,227, Sept. 28.
Bieberich, Paul, Fort Wayne, Ind. Wire-drawing die lapping machine. 2,450,077, Sept. 28.
Bishop, Harold O., and D. Kirk, Jr., United States Navy. Microwave vacuum tube. 2,449,975, Sept. 28.
Bixer, Edmond P., New York, N. Y. Cloth bolt display rack. 2,450,180, Sept. 28.
Black, William C.: *See*—
Kesler, Carl C., Black, Hicks, and Owen.

Blazey, Lawrence E., Bay Village, Ohio, assignor, by mesne assignments, to Office Furniture & Fixtures, Inc., Washington, D. C. Caster unit. 2,450,228, Sept. 28.
Blohm, Herman A., Washington, D. C. Ophthalmolagist's tool. 2,450,229, Sept. 28.
Blome, Walter A.: *See*—
Gardener, Harry J., and Blome.
Boardwalk Enterprises, Inc., assignee: *See*—
Krilow, James E.
Boehlow, Robert W.: *See*—
Kommer, Fred A., and Boehlow.
Bohn, Donald L., Pittsburgh, Pa. Ignition system. 2,450,404, Sept. 28.
Bonnell, William S.: *See*—
Weinrich, William W., Holloway, and Bonnell.
Booth, Fred, Jr., assignor to Duplex Incorporated, Los Angeles, Calif. Resilient sash bearing. 2,450,078, Sept. 28.
Boots Pure Drug Company Limited, assignee: *See*—
Short, Wallace F., and Partridge.
Borglin, Joseph N., assignor to Hercules Powder Company, Wilmington, Del. Stabilization of terpene polymers. 2,449,970, Sept. 28.
Bostwick, Fred D., Thienaville, assignor to A. O. Smith Corporation, Milwaukee, Wis. Mixing vessel and deflector therefor. 2,450,107, Sept. 28.
Boucher, Auguste, and L. Parveau, Vignols, France. Slotting and tenoning machine. 2,450,181, Sept. 28.
Boyce, Thompson, Institute for Plant Research, Inc., assignee: *See*—
Denny, Frank E.
Breeze Corporations, Inc., assignee: *See*—
Strunk, Kenith G., and Lelek.
Bremner, John G. M., and D. G. Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Production of heterocyclic compounds. 2,450,108, Sept. 28.
Bridge, Arthur S.: *See*—
Grace, Barnett, Ellison, Leman, Leng, and Bridge.
Briggs & Stratton Corporation, assignee: *See*—
Jacobi, Edward N.
Brinkoeter, Clinton C., assignor to Ed Friedrich, Inc., San Antonio, Tex. Walk-in refrigerator cooled by a forced air circuit. 2,450,109, Sept. 28.
Britton, Philip S.: *See*—
Wilson, Oran C., and Britton.
Brooks, Lewis C., Milwaukee, assignor of one-third to I. M. Jones, River Hills, Wis. Consumer type container. 2,450,110, Sept. 28.
Brosemer, Robert L., Sacramento, Calif. Oven feeding machine. 2,450,111, Sept. 28.
Brown, Henry T., Whiting, Ind., and R. V. Shankland, assignors to Standard Oil Company, Chicago, Ill. Preparation of spheroidal catalysts. 2,450,394, Sept. 28.
Brown, Kenneth R., West Chester, Pa., assignor to Atlas Powder Company, Wilmington, Del. Waxy polyol etheresters. 2,450,079, Sept. 28.
Browning Laboratories, Inc., assignee: *See*—
Cann, Arthur F.
Buckholdt, Robert E., assignor to The Salem Engineering Company, Salem, Ohio. Quenching and conveying apparatus. 2,450,112, Sept. 28.
Burchett, Paul J., Glendale, Calif. Speed control device for motor vehicles. 2,450,113, Sept. 28.
Burkhardt, George R., Chicago, Ill. Noble gas metallurgy. 2,450,081, Sept. 28.
Burney, Milton, Austin, Tex. Refrigerating apparatus for cold storage cabinets. 2,450,114, Sept. 28.
Burrell, James H., and P. E. Richey, Rocky Ford, Colo. Power take-off device. 2,450,080, Sept. 28.
Burroughs, Franklin L., assignor to Sylvania Electric Products Inc., Emporium, Pa. Frequency modulation at ultra high frequencies. 2,450,182, Sept. 28.
Bush, Alonzo O., assignor to Norton Company, Worcester, Mass. Grinding wheel chuck. 2,450,230, Sept. 28.
Busignies, Henri G., Forest Hills, assignor to International Standard Electric Corporation, New York, N. Y. Tridimensional obstacle detection system. 2,449,976, Sept. 28.
Busignies, Henri G., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Location indicating system. 2,449,977, Sept. 28.
Buxton, James E., Elmira, assignor to Bendix Aviation Corporation, Elmira, N. Y. Engine starter. 2,450,231, Sept. 28.
Byrnes, Clarence P., Fort Lauderdale, Fla. Die drawing of hollow glass blanks. 2,450,115, Sept. 28.
Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of beta-lactones. 2,450,116, Sept. 28.
Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of β-lactones. 2,450,117, Sept. 28.
Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of β-lactones. 2,450,118, Sept. 28.
Campbell, William J., assignor to Climax Machinery Company, Indianapolis, Ind. Joint structure. 2,450,232, Sept. 28.
Cann, Arthur F., Danvers, assignor to Browning Laboratories, Inc., Winchester, Mass. Reversely-connected electric discharge device system. 2,450,032, Sept. 28.
Carbide and Carbon Chemicals Corporation, assignee: *See*—
Cogan, Howard D., and Ketcham.
Carnegie-Illinois Steel Corporation, assignee: *See*—
Sanderson, Robert I.
Carry-Cab Corporation, assignee: *See*—
Manning, Fowler.
Carson, William F., Jr., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Isomerization of pinene to camphene. 2,450,119, Sept. 28.
Carter Carburetor Corporation, assignee: *See*—
Dulong, Roger R.
Kommer, Fred A., and Boehlow.
Casablancas High Draft Company Limited, assignee: *See*—
Noguera, Joseph.
Castellan, Carl A.: *See*—
Stanley, Richard W., and Castellan.
Cate, Paul E., Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company. Method and apparatus for bonding thin sections to heavier members. 2,450,120, Sept. 28.
Celanese Corporation of America, assignee: *See*—
Jackson, Thomas, and Hill.
Centrifix Corporation, assignee: *See*—
Wright, Bruce R.
Chabrol, Armand A., Seine, France, assignor to General Electric Company. Temperature measuring system. 2,450,269, Sept. 28.
Christian, Raymond A., J. R. Ganger, and W. L. Paden, assignors to The National Cash Register Company, Dayton, Ohio. Accounting machine. 2,450,121, Sept. 28.
Christiansen, Christian, V. Aker, near Oslo, and G. O. K. Rüsch, Mandal, Norway. Checking device for the warp threads in circular looms. 2,450,183, Sept. 28.
Cities Service Oil Company, assignee: *See*—
Morgan, John D., and Levitt.
Clark, Trevor H., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio direction finder. 2,449,978, Sept. 28.
Climax Machinery Company, assignee: *See*—
Campbell, William J.
Clive, James, Ewhurst, Guildford, England. Automobile headlamp control. 2,450,370, Sept. 28.
Clothier, Robert L., Denville, N. J. Method and device for removing rotating bands from projectiles. 2,449,979, Sept. 28.
Cluett, Peabody & Co., Inc., assignee: *See*—
Schreiner, George A.
Coates, Neligh C., Kansas City, Mo. Masonry saw. 2,450,371, Sept. 28.
Cogan, Howard D., Glenshaw, Pa., and N. H. Ketcham, Flushing, N. Y., assignors to Carbide and Carbon Chemicals Corporation. Heat-resistant coating composition. 2,450,327, Sept. 28.
Cohen, Morris, assignor to Interstate Bakeries Corporation, Kansas City, Mo. Making jelly rolls or the like. 2,450,033, Sept. 28.
Colbert, Charles L., assignee: *See*—
Vallton, Frederick H.
Coleman, Harry E., Mount Vernon, N. Y. Air conditioning grille or register assembly. 2,450,184, Sept. 28.
Colnmbus McKinnon Chain Corporation, assignee: *See*—
Gilbert, Lowell B., and Kieffer.
Continental Can Company, Inc., assignee: *See*—
Kronquest, Alfred L., and Sedwick.
Cornell-Dubilier Electric Corporation, assignee: *See*—
Dubilier, William.
Coss, George R.: *See*—
Hahn, Paul T., and Coss.
Cotton, Robert B., Lansdowne, Pa., assignor to All American Aviation, Inc. Aircraft barrier. 2,450,328, Sept. 28.
Court, Frank T., assignor to Deere & Company, Moline, Ill. Hydraulic mechanism, especially plural cylinder system and control therefor. 2,450,270, Sept. 28.
Craig, Burnie J., Los Angeles County, Calif. Coincidental vehicle door locking system. 2,450,372, Sept. 28.
Craig, W E: *See*—
Hester, William F., and Craig.
Crane Co., assignee: *See*—
Eckman, Harry A., and Maack.
Craven, Howard F., Redondo Beach, Calif. Hand operated rotary impact screw driver. 2,450,185, Sept. 28.
Cronin, Howard J., Glens Falls, assignor to International Paper Company, New York, N. Y. Groundwood bleaching by hydrosulfite. 2,450,034, Sept. 28.
Crumb, Charles F., Clarendon Hills, L. H. Kaupke, R. R. Raney, La Grange, and L. E. Smith, Congress Park, Ill., assignors to International Harveater Company. Pickup baler. 2,450,082, Sept. 28.
Cryns, Max P., Kansas City, Mo., assignor, by mesne assignments, to I. M. Jones, Milwaukee, Wis. Wheat germ preparation. 2,450,123, Sept. 28.
Culbertson, Robert A.: *See*—
Angel, Charles M., and Culbertson.
Cummings, Joseph R., Venice, Calif. Tiltable utensil drawer. 2,450,233, Sept. 28.
Curry, Benjamin W., Jacksonville, Fla. Turbine blower. 2,450,186, Sept. 28.
Curtiss-Wright Corporation, assignee: *See*—
Jenny, Robert W.

Cusic, John W., assignor to G. D. Searle & Co., Skokie, Ill. Aminoalkyl - 9,10 - dihydroanthryl ketones. 2,450,122, Sept. 28.
Damschroder, Rudolph E., and M. E. Kauffman, assignors to Eastman Kodak Company, Rochester, N. Y. Removal of photographically active ingredients from gelatin. 2,449,980, Sept. 28.
Dana Corporation, assignee: *See*—
Peterson, Carl D., and Deimel.
Dann, Charles W., Orange, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Electrical connector. 2,450,271, Sept. 28.
Day, Irving W., Cranston, R. I., assignor to Universal Winding Company, Boston, Mass. Winding machine. 2,450,187, Sept. 28.
Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Electromagnetic relay structure. 2,449,981, Sept. 28.
Deane, Earl C., North Kansas City, Mo. Pneumatic timing switch for electric circuits. 2,450,329, Sept. 28.
Deere & Company, assignee: *See*—
Court, Frank T.
De Giers, Clarence A., Forest Hills, assignor to The Liquidometer Corporation, Long Island City, N. Y. Fastening device for cover plates. 2,450,330, Sept. 28.
De Giers, Clarence A., Forest Hills, and S. B. Osterlund, St. Albans, assignors to The Liquidometer Corporation, Long Island City, N. Y. Pointer return device. 2,450,331, Sept. 28.
De Graaf, Bastiaan, Yonkers, N. Y. Push and pull load gauge. 2,450,188, Sept. 28.
De Groote, Melvin, University City, Mo., assignor to Petrolite Corporation, Ltd., Wilmington, Del. Polycarboxy esters of dimerized 9,11-linolo-diricinolein and method of making same. 2,450,332, Sept. 28.
De Groote, Melvin, University City, and A. F. Wirtel, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Polyhydric alcohol esters. 2,450,124, Sept. 28.
De Groote, Melvin, University City, and A. F. Wirtel, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Polyhydric alcohol esters. 2,450,333, Sept. 28.
Deimel, Albert H.: *See*—
Peterson, Carl D., and Deimel.
De Mian, Stanley B., Chicago, Ill., assignor to International Paper Company, New York, N. Y. Box. 2,450,035, Sept. 28.
Denny, Frank E., Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc. Sprouting of buds. 2,450,036, Sept. 28.
De Rosa, Louis A., Staten Island, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio beacon. 2,449,982, Sept. 28.
Devol, George C., Greenwich, Conn., assignor to The Sperry Corporation. Coaxial line coupling. 2,449,983, Sept. 28.
Distillers Company Limited, The, assignee: *See*—
Tuerck, Karl H. W.
Dixon, James K., Riverside, and D. R. May, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Production of aryl substituted ethylenic compounds. 2,450,334, Sept. 28.
Doelling, George L., St. Louis, and K. H. Adams, Fenton, assignors to Mississippi Valley Research Laboratories, Inc., St. Louis, Mo. Plasticizable organic compounds plasticized with an alkoxyalkyl ether of a halonitrophenol. 2,450,272, Sept. 28.
Donahue, Patrick F., assignor to Scovill Manufacturing Company, Waterbury, Conn. Sink strainer valve and operating mechanism therefor. 2,450,392, Sept. 28.
Donahue, Patrick F., assignor to Scovill Manufacturing Company, Waterbury, Conn. Sink strainer valve and operating mechanism therefor. 2,450,393, Sept. 28.
Donaldson, Henry V., Glencoe, Ill., assignor to The Munising Paper Company, Munising, Mich. Treated paper liner for adhesive rolls. 2,450,083, Sept. 28.
Dubilier, William, New Rochelle, N. Y., assignor to Cornell-Dubilier Electric Corporation, South Plainfield, N. J. High-voltage terminal. 2,450,273, Sept. 28.
Dulong, Roger R., assignor to Carter Carburetor Corporation, St. Louis, Mo. Governor. 2,450,037, Sept. 28.
Dummett, George A.: *See*—
Ralph, Sydney J., and Dummett.
Dunfee, H. Calvin, Miami, Fla. Game apparatus. 2,450,125, Sept. 28.
Duplex Incorporated, assignee: *See*—
Booth, Fred, Jr.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Batchelder, George W., and Hawkins.
Howk, Benjamin W., and Johnston.
Eastman Kodak Company, assignee: *See*—
Caldwell, John R.
Damschroder, Rudolph E., and Kauffman.
Hagemeyer, Hugh J., Jr.
Eaton, Wilfred A., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Pressure fluid follow-up servomotor. 2,450,274, Sept. 28.
Eaton, Wilfred A., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Control valve mechanism. 2,450,275, Sept. 28.
Eckert, George W.: *See*—
Bergmann, Eric A., Ashburn, and Eckert.
Eckman, Harry A., and H. W. Maack, assignors to Crane Co., Chicago, Ill. Malleable cast iron. 2,450,395, Sept. 28.
Edison, Thomas A., Incorporated, assignee: *See*—
Dann, Charles W.
Eitel-McCullough, Inc., assignee: *See*—
Gordon, Ronald, and Miller.
Elliott, William V., administrator: *See*—
Bergman, Charles P.
Ellis-Foster Company, assignee: *See*—
Wells, Franklin B.
Ellis, Victor G.: *See*—
Voss, Grace, and Ellis.
Ellison, Leslie J.: *See*—
Grace, Bertram B., Ellison, Leman, Bridge, and Leng.
Richards, Edward A., Ellison, and Gray.
Emanuel, Frederick, assignor to Eumuco (England) Limited, Barnes, London, England. Drop hammer, stamp, and the like. 2,450,189, Sept. 28.
Emerson, John F., Hasbrouck Heights, assignor to Bendix Aviation Corporation, Teterboro, N. J. Electric motor servo control system. 2,450,084, Sept. 28.
Engelman, Edmund: *See*—
Master, Warren S., and Engelman.
Eumuco (England) Limited, assignee: *See*—
Emanuel, Frederick.
Eureka Williams Corporation, assignee: *See*—
Hahn, Paul T., and Coss.
Evans, Theodore W., and E. C. Shokal, Oakland, assignors to Shell Development Company, San Francisco, Calif. Autocondensation polymers of unsaturated glycidyl ethers and method of producing same. 2,450,234, Sept. 28.
Fabian, Emil L., Vallejo, Calif. Rotary compressor lubrication. 2,450,190, Sept. 28.
Farnsworth Research Corporation, assignee: *See*—
Knox, Arthur L.
Weaver, Jerald D.
Federal Telephone and Radio Corporation, assignee: *See*—
Busignies, Henri G.
Clark, Trevor H.
De Rosa, Louis A.
Labin, Emile, and Grieg.
Litton, Charles V.
Lomholt, Carl.
Master, Warren S., and Engelman.
Newitt, John H.
Preisman, Albert.
Warner, Arthur J., and Talbot.
Feinberg, Archie S., Dallas, Tex. Mat frame for evaporative coolers. 2,450,191, Sept. 28.
Fibro-Mold Specialties, Inc., assignee: *See*—
Skolnik, Max.
Flene, Heinrich A., Johannesburg, Transvaal, Union of South Africa. Folding gocart. 2,450,373, Sept. 28.
Firestone, Linn J., assignee: *See*—
Grelck, William P. M.
Fisher, Delbert P., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid power steering mechanism. 2,450,126, Sept. 28.
Fletcher, Ed: *See*—
Slayter, Games, and Fletcher.
Fletcher Works Incorporated, assignee: *See*—
Bartholomew, Robert J.
Fogler, Benjamin B., and L. F. Marek, Lexington, assignors to Arthur D. Little, Inc., Cambridge, Mass. Process for production of oxygen. 2,450,276, Sept. 28.
Freeman, Walter C., Jr., assignor to Sylvania Electric Products Inc., Emporium, Pa. Ultra high frequency tuning unit. 2,450,192, Sept. 28.
Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Hydrofluoric acid alkylation process. 2,450,038, Sept. 28.
Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Isomerization process. 2,450,039, Sept. 28.
Friedrich, Ed, Inc., assignee: *See*—
Brinkoeter, Clinton C.
Frudden, Conrad E., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Forage cutting apparatus, including rotor having pocketed blades. 2,450,277, Sept. 28.
Fuehrer, George H., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Mounting for rock drills. 2,450,278, Sept. 28.
Galliano, John B., assignor to Industrial Ideas, Inc., Oakland, Calif. Pot handle. 2,450,193, Sept. 28.
Ganger, Jesse R.: *See*—
Christian, Raymond A., Ganger, and Paden.
Gantner, John O., Jr., San Francisco, Calif. Swimming suit. 2,450,085, Sept. 28.
Gardener, Harry J., Los Angeles, and W. A. Blome, South Pasadena, Calif. Art device. 2,450,127, Sept. 28.
Gee, William P., Plainfield, N. J., assignor to Texaco Development Corporation, New York, N. Y. Fractional separation of fatty oil substances. 2,450,235, Sept. 28.
Geers, John B.: *See*—
Randall, Harold O., and Geers, and More.
Gemmell, Gordon R., Portland, Oreg. Mixing valve. 2,450,128, Sept. 28.

General Aniline & Film Corporation, assignee: *See*—
Anish, Alfred W.
Heimbach, Newton.
Thompson, Thomas R.

General Electric Company, assignee: *See*—
Bazley, Carl E.
Chabrol, Armand A.
Livingston, Orrin W.
Macintyre, John R.
Maxwell, Hugh S.
Pritchard, Franklin H.
Rowe, Robert F.
Wendt, Harry C.
Jackson, George W.

Gibbs, Harold L., Salt Lake City, Utah. Differential froth flotation of sulfide ores. 2,449,984, Sept. 28.

Gibson, William P., Plainfield, N. J., assignor to Holdall Bag Company, Inc., New York, N. Y. Combined shopping bag and handbag. 2,450,040, Sept. 28.

Gilbert, Lowell B., Kenmore, and R. J. Kieffer, assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y. Chain forming machine. 2,450,396, Sept. 28.

Gillet, Eugene C. Valenciennes, assignor to Societe Anonyme des Tubes de Valenciennes & Denain, Paris, France. Telescopic tubular prop. 2,450,374, Sept. 28.

Glaser, Mark A., Los Angeles, Calif. Adjustable retractor. 2,450,194, Sept. 28.

Gleasman, Vernon E., Elmira, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Engine starter gearing. 2,450,129, Sept. 28.

Gloess, Paul F. M., Paris, France, assignor to International Standard Electric Corporation, New York, N. Y. Receiver for pulse waves. 2,449,985, Sept. 28.

Goodrich, B. F., Company, The, assignee: *See*—
Gresham, Thomas L.
Gresham, Thomas L., and Jansen.
Gresham, Thomas L., and Shaver.

Gordon, Ronald, San Carlos, and H. Miller, assignors to Eitel-McCullough, Inc., San Bruno, Calif. Electrical device having glass-to-metal seal. 2,450,130, Sept. 28.

Grace, Bertram B., L. J. Ellison, H. S. Leman, C. W. Leng, and A. S. Bridge, assignors to Standard Telephones and Cables Limited, London, England. Manufacture of dry contact rectifiers. 2,449,986, Sept. 28.

Grand Specialties Company, assignee: *See*—
Sasgen, Anthony M.

Grantham, William H., Magnolia, Ark. Adjustable pipe fitting assembly. 2,450,195, Sept. 28.

Gray, Frank: *See*—
Richards, Edward A., Ellison, and Gray.

Greick, William P. M., Baltimore, Md., assignor of one-half to L. J. Firestone, Arlington, Va. Food product and method of production. 2,450,335, Sept. 28.

Gresham, Thomas L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of substituted acids from lactones. 2,449,987, Sept. 28.

Gresham, Thomas L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of polycarboxylic acids. 2,449,988, Sept. 28.

Gresham, Thomas L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of beta-thio carboxylic acids. 2,449,989, Sept. 28.

Gresham, Thomas L., and J. E. Jansen, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Beta-acyloxy carboxylic acid compounds and methods of preparing the same. 2,449,990, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Preparation of beta-aroxy carboxylic acids. 2,449,991, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Preparation of beta-thio carboxylic acid compounds. 2,449,992, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Preparation of beta-halo carboxylic acids. 2,449,993, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Beta acyloxy acyl halides from beta lactones. 2,449,994, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Preparation of esters of alpha beta unsaturated carboxylic acids. 2,449,995, Sept. 28.

Gresham, Thomas L., and F. W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Preparation of sulfur containing dicarboxylic acids. 2,449,996, Sept. 28.

Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.

Groves, Albert L., Farmington, Calif. Sheet metal rolling machine. 2,450,041, Sept. 28.

Gudmundsen, Austin: *See*—
McCulloch, Robert P., Ryde, and Gudmundsen.

Gulf Research & Development Company, assignee: *See*—
McCarthy, Paul R.
Weinrich, William W., Holloway, and Bonnell.

Guy, Frederick M., Detroit, Mich., assignor, by mesne assignments, to U. S. Universal Joints Company. Resilient shaft hanger. 2,450,279, Sept. 28.

Haas, Otto R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Sewing machine. 2,450,043, Sept. 28.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Process for preparing β-lactones. 2,450,131, Sept. 28.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of β-lactones. 2,450,132, Sept. 28.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Process for preparing lactones. 2,450,133, Sept. 28.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of β-lactones. 2,450,134, Sept. 28.

Hager, Emil F., Queens Village, N. Y. Work support arrangement for grinding and dressing machines. 2,450,135, Sept. 28.

Hahn, Paul T., and G. R. Coss, Detroit, Mich., assignors to Eureka Williams Corporation. Convertible suction cleaner with agitator drive disengaging means. 2,449,997, Sept. 28.

Hales, Ralph A., West Chester, Pa., assignor to Atlas Powder Company, Wilmington, Del. Preparation of phenolphthalein B,B'-diglucoside. 2,450,086, Sept. 28.

Hall, Thomas J., Betchworth, England. Electrical coupling device particularly for electric heating appliance stands. 2,450,336, Sept. 28.

Hamilton, Robert L., Birmingham, Ala. Wrist watch band. 2,450,136, Sept. 28.

Hammond, William S.: *See*—
Winslow, Fred H., and Hammond.

Hancock Manufacturing Company, assignee: *See*—
Marple, Rollo.

Hansen, John C., Avon, N. J. Modulator circuit. 2,449,998, Sept. 28.

Harlamoff, Anatol J., South Gate, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Multistage centrifugal pump. 2,450,137, Sept. 28.

Harold, Edwin P., Menasha, Wis. Antiskid chain. 2,450,042, Sept. 28.

Hartman, Aaron M., assignee, et al.: *See*—
Selden, Herman.

Hartsough, Baron, San Francisco, Calif. Tone cabinet for electric organs. 2,450,139, Sept. 28.

Harvey, Valentine P., assignor to Molins Machine Company, Limited, Deptford, London, England. Fuse-setting apparatus. 2,450,375, Sept. 28.

Harwood, Kenneth J., Neenah, Wis., assignor to International Cellucotton Products Company. Tampon applicator. 2,450,138, Sept. 28.

Hawkins, Albert W.: *See*—
Batchelder, George W., and Hawkins.

Hawley, John B., Jr., assignors to Northern Ordnance Incorporated, Minneapolis, Minn. Oil well blowing apparatus. 2,450,140, Sept. 28.

Hayden, Ernest A.: *See*—
Stone, Albert F., and Hayden.

Hays, Fred N., Edgewood, Pa. Open-flame heated continuous furnace. 2,450,087, Sept. 28.

Hearst, Frank T., Dallas, Tex. Auxiliary utility cabinet. 2,450,337, Sept. 28.

Heaton-Armstrong, Louis J., assignor to Standard Telephones and Cables Limited, London, England. Antenna system for defining glide paths. 2,449,999, Sept. 28.

Heidbrink, Jay A., Minneapolis, Minn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Valve structure for controlling flow of gases through absorbers. 2,450,338, Sept. 28.

Heiligman, Harold A.: *See*—
Howard, John J., and Heiligman.

Helmbach, Newton, Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. 5-hydroxy-1,3,4-triazaindolizines as stabilizers for photographic silver-halide emulsions. 2,450,397, Sept. 28.

Henderson, E. O., & Sons, assignee: *See*—
Henderson, Elden O.

Henderson, Elden O., assignor to E. O. Henderson & Sons, Oklahoma City, Okla. Open-front refrigerated display cabinet. 2,450,088, Sept. 28.

Hensel, Franz R., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Method of making porous metal filters. 2,450,339, Sept. 28.

Hensel, Franz R., and E. I. Larsen, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Silver base alloy for metal evaporation. 2,450,340, Sept. 28.

Hercules Powder Company, assignee: *See*—
Berglin, Joseph N.
Carson, William F., Jr.

Hershberger, William D., Haddonfield, N. J., assignor to Radio Corporation of America. Sensitive distance measurement device. 2,450,341, Sept. 28.

Hester, William F., Drexel Hill, and W. E. Craig, assignors to Röhm & Haas Company, Philadelphia, Pa. Chlorohydroxynitrophenyl sulfide. 2,450,342, Sept. 28.

Hicks, William L.: *See*—
Kesler, Carl C., Black, Hicks, and Owen.

Hiergesell, Frank O. V.: *See*—
Hiergesell, Valentine, and Frank, O. V.

Hiergesell, Valentine and F. O. V., Springfield Township, Montgomery County, Pa. Thermometer package. 2,450,089, Sept. 28.

Hill, Frank B.: *See*—
Jackson, Thomas, and Hill.

Hobbs, Bryan J., Millwood, Wash. Tool handle lock. 2,450,044, Sept. 28.

Hobbs, John W., assignor to John W. Hobbs Corporation, Springfield, Ill. Portable hand light. 2,450,141, Sept. 28.

Hobbs, John W., Corporation, assignee: *See*—
Hobbs, John W.

Hoffman, Otto, Portland, Oreg. Hand propelled wheeled cultivator. 2,450,236, Sept. 28.

Holdall Bag Company, Inc., assignee: *See*—
Gibson, William P.

Holicer, John R., Shreveport, La. Slip tube gauge for liquefied petroleum gas tanks. 2,450,142, Sept. 28.

Holloway, Clark A., Jr.: *See*—
Weinrich, William W., Holloway, and Bonnell.

Holmes, Henry H., assignor to Wildt and Company Limited, Leicester, England. Knitting machine. 2,450,376, Sept. 28.

Homon, Albert J., Chicopee, assignor to Springfield Wire & Tinsel Co., West Springfield, Mass. Method of making metal sponges. 2,450,280, Sept. 28.

Honig, Emanuel, assignee: *See*—
Zschiegner, Herbert E.

Houston, John M., Breckenridge, Tex. Brake shoe adjusting gauge. 2,450,196, Sept. 28.

Howard, Giles P. E., and A. Ivanoff, Luton, England. Centrifugal pump provided with diffuser. 2,450,143, Sept. 28.

Howard, John J., Philadelphia, and H. A. Heiligman, Norristown, assignors to E. J. Lavino and Company, Philadelphia, Pa. Treating oxide ores. 2,450,343, Sept. 28.

Howk, Benjamin W., Wilmington, and F. L. Johnston, Claymont, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Emulsion polymerization of methyl methacrylate. 2,450,000, Sept. 28.

Hudson County National Bank, executor: *See*—
Rose, William H.

Hudson, Perry D., Corpus Christi, Tex. Power lift material weighing machine. 2,450,281, Sept. 28.

Humphries, Arthur J., Harrogate, England, assignor to International Standard Electric Corporation, New York, N. Y. Cross connection strip as used in telephone and like systems. 2,450,001, Sept. 28.

Hunt, William H., Bridgeport, Conn. Clamp for attaching articles to the tops of automobiles. 2,450,090, Sept. 28.

Huntley, Ernest A.: *See*—
Wolff, Harry J. D., and Huntley.

Imperial Chemical Industries Limited, assignee: *See*—
Bremner, John G. M., and Jones.

Independent Pneumatic Tool Company, assignee: *See*—
Perham, James A.

Indge, Herbert S., Westboro, assignor to Norton Company, Worcester, Mass. Abrasive machine. 2,450,237, Sept. 28.

Industrial Ideas, Inc., assignee: *See*—
Galliano, John B.

Ingersoll-Rand Company, assignee: *See*—
Fuehrer, George H.

International Cellucotton Products Company, assignee: *See*—
Harwood, Kenneth J.

International Harvester Company, assignee: *See*—
Avila, Frank W.
Crumb, Charles F., Kaupke, Raney, and Smith.
Toland, Wayne G.

International Paper Company, assignee: *See*—
Cronin, Howard J.
De Mian, Stanley B.
Smith, Arnold A.

International Standard Electric Corporation, assignee: *See*—
Busignies, Henri G.
Deakin, Gerald.
Gloess, Paul F. M.
Humphries, Arthur J.
Richards, Edward A., Ellison, and Gray.

Interstate Bakeries Corporation, assignee: *See*—
Cohen, Morris.

Ishler, Harry K., Floral Park, N. Y., assignor to Sylvania Electric Products, Inc. Electric discharge device. 2,450,197, Sept. 28.

Ivanoff, Alexander: *See*—
Howard, Giles P. E., and Ivanoff.

Jackson, George W., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Antifriction screw and nut actuator. 2,450,282, Sept. 28.

Jackson, Theodore F., assignor of one-half to W. B. Keres, Rockford, Ill. Pocket toothbrush. 2,450,002, Sept. 28.

Jackson, Thomas, and F. B. Hill, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Apparatus for the treatment of textile strands. 2,450,045, Sept. 28.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Electrical control instrument. 2,450,144, Sept. 28.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Latch device. 2,450,145, Sept. 28.

Jansen, Jacob E.: *See*—
Gresham, Thomas L., and Jansen.

Jeffrey Manufacturing Company, The, assignee: *See*—
Ainsworth, Harold W.

Jenny, Robert W., East Paterson, assignor to Curtiss-Wright Corporation, Bloomfield, N. J. Linkage for equispacing radially guided apparatus. 2,450,046, Sept. 28.

Johnson, Charles P.: *See*—
Sporing, Percy A., and Johnson.

Johnston, Frederick L.: *See*—
Howk, Benjamin W., and Johnston.

Jones, David G.: *See*—
Bremner, John G. M., and Jones.

Jones, Ira M., assignee: *See*—
Brooks, Lewis C.
Cryns, Max P.

Jones, Martin L., Baltimore, Md. Antenna pattern tracer. 2,450,283, Sept. 28.

Jordan, Benjamin H., Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Tap holder. 2,450,238, Sept. 28.

Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.

Jung, Albert H., Flushing, assignor to Victor Metal Products Corporation, Brooklyn, N. Y. Comb and brush set. 2,450,344, Sept. 28.

Kahn, Robert L., trustee: *See*—
Smith, George G.

Kail, Karl A., Montrose, Pa., assignor to Link Aviation, Inc. Aviation trainer. 2,450,239, Sept. 28.

Kail, Karl A., Montrose, Pa., assignor to Link Aviation, Inc., Binghamton, N. Y. Radio direction finding means for aviation trainers. 2,450,240, Sept. 28.

Kauffman, Marie E.: *See*—
Damschroder, Rudolph E., and Kauffman.

Kaufmann, John J., Elkins Park, assignor to Steele Heddle Manufacturing Company, Philadelphia, Pa. Loom harness. 2,450,241, Sept. 28.

Kaupke, Lee H.: *See*—
Crumb, Charles F., Kaupke, Raney, and Smith.

Kendall, Floyd J., assignor to The Springfield Metallic Casket Co., Inc., Springfield, Ohio. Corner holding device. 2,450,091, Sept. 28.

Kennett, Clarence E., Warrenville, S. C. Stirrup for jack sticks in looms. 2,450,198, Sept. 28.

Keres, Walter B., assignee: *See*—
Jackson, Theodore F.

Kervin, William M., Montreal, Quebec, Canada. Protective cap for wood posts, poles, and the like. 2,450,345, Sept. 28.

Kesler, Carl C., W. C. Black, W. L. Hicks, and C. N. Owen, assignors to Penick & Ford, Ltd., Incorporated, Cedar Rapids, Iowa. Starch-resin reaction product and method of producing the same. 2,450,377, Sept. 28.

Ketcham, Newton H.: *See*—
Cogan, Howard D., and Ketcham.

Kieffer, Raymond J.: *See*—
Gilbert, Lowell B., and Kieffer.

Kimsey, William A.: *See*—
Siekmann, Harold J., and Kimsey.

King, Nathaniel: *See*—
Thompson, Harold L., and King.

Kirk, Donald, Jr.: *See*—
Bishop, Harold O., and Kirk.

Kirschner, Otto S.: *See*—
Peterson, Fred W., and Kirschner.

Klipsch, Paul W., Hope, Ark. Rotating band tester. 2,450,003, Sept. 28.

Klod, William J., Weehawken, N. J. Valve. 2,450,242, Sept. 28.

Kloeckener, Fritz, New York, N. Y. Fabric. 2,450,047, Sept. 28.

Knobel, Max: *See*—
Schirmer, Cyrus T., and Knobel.

Knott, Clyde L., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Automatic manually controlled clutch. 2,450,048, Sept. 28.

Knox, Arthur L., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Automatic phonograph. 2,450,378, Sept. 28.

Knox, Graham, San Francisco, Calif. Lathe spindle stop. 2,450,004, Sept. 28.

Knudsen, Percy E., Pittsburgh, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Glass-lined container for corrosive substances. 2,450,146, Sept. 28.

Kommer, Fred A., and R. W. Boehlow, assignors to Carter Carburetor Corporation, St. Louis, Mo. Carburetor device. 2,450,049, Sept. 28.

Krilow, James E., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J. Kitchen utensil. 2,450,346, Sept. 28.

Krilow, James E., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J. Paring utensil. 2,450,347, Sept. 28.

Krilow, James E., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J. Vegetable slitting utensil. 2,450,348, Sept. 28.

Kronquest, Alfred L., and M. M. Sedwick, Syracuse, assignors to Continental Can Company, Inc., New York, N. Y. Container sealing machine having seaming mechanism actuated by fluid pressure operated means responsive to vacuum. 2,450,243, Sept. 28.

Labine, Emile, New York, and D. D. Grieg, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Omnidirectional radio beacon. 2,450,005, Sept. 28.

Larsen, Earl I.: *See*—
Hensel, Franz R., and Larsen.

Lavino, E. J., and Company, assignee: *See*—
Howard, John J., and Heiligman.

Lawry, Richard T., Richmond, Calif. Cable clamp. 2,450,147, Sept. 28.

Le Blond, R. K., Machine Tool Company, The, assignee: *See*—
Siekmann, Harold J., and Kimsey.

Leibing, William E.: *See*—
Wirth, Emil O., and Leibing.

Leibing, William E., Santa Barbara, Calif. Governor. 2,450,199, Sept. 28.

Lelek, Thaddeus A.: *See*—
Strunk, Kenith G., and Lelek.

Leman, Hugh S.: *See*—
Grace, Bertram B., Ellison, Leman, Leng, and Bridge.

Leng, Charles W.: *See*—
Grace, Bertram B., Ellison, Leman, Leng, and Bridge.

Lesniak, Frank G., assignor to Masonite Corporation, Laurel, Miss. Thickener. 2,450,006, Sept. 28.

Lev, Benjamin, Chicago, Ill. Uniform cap. 2,450,284, Sept. 28.

Levitt, Percy B.: *See*—
Morgan, John D., and Levitt.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Pearse, John P., and Bamford.

Libshutz, Harry: *See*—
Libshutz, Irving and H.

Libshutz, Irving and H., Baltimore, Md. Folding uniform cap stayer. 2,450,148, Sept. 28.

Lidberg, Oscar J., Hibbing, Minn. Glider sled. 2,450,285, Sept. 28.

Linforth, Paul S., assignee: *See*—
Wells, William S.

Link Aviation, Inc., assignee: *See*—
Kall, Karl A.
West, Russell L.

Liquidometer Corporation, The, assignee: *See*—
De Giers, Clarence A.
De Giers, Clarence A., and Osterlund.

Little, Arthur D., Inc., assignee: *See*—
Fogler, Benjamin B., and Marek.
Marek, Leroy F.

Litton, Charles V., Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Carburized filament and method for treating the same. 2,450,007, Sept. 28.

Livingston, Orrin W., Scotia, N. Y., assignor to General Electric Company. Second harmonic nonlinear amplifier. 2,450,286, Sept. 28.

Lobe, Albert, assignee: *See*—
Rickerson, Floyd K.

Locke, Niel C., Lockeford, Calif. Leveling and contouring machine. 2,450,200, Sept. 28.

Logan, Otis A., Kansas City, Mo. Fifth wheel assembly. 2,450,201, Sept. 28.

Lomholt, Carl, Bogota, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Cooperating card envelope and a card holder with detent retaining means. 2,450,008, Sept. 28.

Lynch, Clarence S., Arlington, Va. Beverage container and dispensing device. 2,450,244, Sept. 28.

Maack, Henry W.: *See*—
Eckman, Harry A., and Maack.

Macintyre, John R., South Peabody, Mass., assignor to General Electric Company. Range timer. 2,450,287, Sept. 28.

Macy, James C., New Cumberland, assignor to Aircraft-Marine Products, Inc., Harrisburg, Pa. Electrical connector. 2,450,050, Sept. 28.

Macy, James C., New Cumberland, assignor to Aircraft-Marine Products, Inc., Harrisburg, Pa. Electrical connector. 2,450,202, Sept. 28.

Maddock, Alan J., assignor to Standard Telephones and Cables Limited, London, England. Multiple stage thermionic valve. 2,450,009, Sept. 28.

Maisch, George, Sea Cliff, assignor to Powers Photo Engraving Company, Glen Cove, N. Y. Photoelectric exposure meter. 2,450,288, Sept. 28.

Mallory, P. R., & Co., Inc., assignee: *See*—
Hensel, Franz R.
Hensel, Franz R., and Larsen.

Manning, Fowler, Bronxville, assignor to Carry-Cab Corporation, New York, N. Y. Baby carriage construction. 2,450,051, Sept. 28.

Marek, Leroy F.: *See*—
Fogler, Benjamin B., and Marek.

Marek, Leroy F., Lexington, assignor to Arthur D. Little, Inc., Cambridge, Mass. Gas treating apparatus. 2,450,289, Sept. 28.

Marple, Rollo, assignor to Hancock Manufacturing Company, Jackson, Mich. Locking system for vehicle doors. 2,450,052, Sept. 28.

Mason, Fred J., Syracuse, N. Y. Sanding device for vehicles. 2,450,245, Sept. 28.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,450,010, Sept. 28.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,450,011, Sept. 28.

Masonite Corporation, assignee: *See*—
Lesniak, Frank G.

Master, Warren S., Rutherford, N. J., and E. Engelman, Elmhurst, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Voltage regulator. 2,450,012, Sept. 28.

Maxwell, Hugh S., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,450,290, Sept. 28.

May & Baker Limited, assignee: *See*—
Barber, Harry J.

May, Donald R.: *See*—
Dixon, James K., and May.

Mayer, John L., Kansas City, Mo. Guarded window assembly. 2,450,349, Sept. 28.

McCarthy, Paul R., Allison Park, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Block grease compositions. 2,450,149, Sept. 28.

McCarthy, Samuel M., Columbus, Ga. Air charger for storage tanks. 2,450,291, Sept. 28.

McCarty, Glenn W., Wichita, Kans. Pneumatic grain conveyer. 2,450,053, Sept. 28.

McCulloch, Robert P., J. L. Ryde, and A. Gudmundsen, Milwaukee, Wis., said Ryde and said Gudmundsen assignors to said McCulloch. Piston for rotary engines. 2,450,150, Sept. 28.

McNaughton, David H., Sr., assignor of twenty-five per cent to P. B. Mitchell, Saskatoon, Saskatchewan, Canada. Mechanical gripping tool. 2,450,151, Sept. 28.

Melichar, Joseph F.: *See*—
Parker, Arthur L. and H. M., and Melichar.

Metal Hydrides Incorporated, assignee: *See*—
Alexander, Peter P.

Metropolis Bending Company, assignee: *See*—
Puls, Alfred E., and Swenson.

Miller, Donald L., Pine City, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Engine starter gearing. 2,450,246, Sept. 28.

Miller, Harold: *See*—
Gordon, Ronald, and Miller.

Miller, Howard B., Seattle, Wash. Fruit picker's crane. 2,450,152, Sept. 28.

Mississippi Valley Research Laboratories, Inc., assignee: *See*—
Doelling, George L., and Adams.

Mitchell, Paul B., assignee: *See*—
McNaughton, David H., Sr.

Moline Machine Company, Limited, assignee: *See*—
Harvey, Valentine P.

Monarch Governor Company, assignee: *See*—
Anderson, James W., Jr.

Moore, Edward R., Fargo, N. Dak. Embalmer's protector. 2,450,247, Sept. 28.

Moore, Sidney A., assignor to The Prime Manufacturing Company, Milwaukee, Wis. Voltage indicator for electric fences. 2,450,153, Sept. 28.

More, John H., administrator: *See*—
Randall, Harold O., and Geers, and More.

Morgan, David E., Philadelphia, Pa., assignor to Warren Webster & Company, Camden, N. J. Radiator fin construction. 2,450,203, Sept. 28.

Morgan, John D., South Orange, and P. B. Levitt, Millburn, N. J., assignors to Cities Service Oil Company, New York, N. Y. Grease dispensing unit. 2,450,248, Sept. 28.

Munising Paper Company, assignee: *See*—
Donaldson, Henry V.

Murphy Automatic Pinsetter Co., Inc., assignee: *See*—
Murphy, John F.

Murphy, John F., Middleboro, assignor to Murphy Automatic Pinsetter Co., Inc., Cambridge, Mass. Automatic pin setting machine. 2,450,249, Sept. 28.

Napier, D., & Son Limited, assignee: *See*—
Ramsay, Frank R. F.

Napton, John R., Marshall, Mo. Hinged heel shoe. 2,450,250, Sept. 28.

Nathan Manufacturing Company, assignee: *See*—
Angel, Charles M., and Culbertson.

National Battery Company, assignee: *See*—
Sargent, William C.

National Cash Register Company, The, assignee: *See*—
Christian, Raymond A., Ganger, and Paden.
Randall, Harold O., and Geers, and More.

Nelson, Arthur C., Alexandria, Minn. Sole edge trimmer. 2,450,292, Sept. 28.

Nelson, Oliver J., Parsons, Kans., assignor to himself as trustee. Apparatus for producing rock wool. 2,450,013, Sept. 28.

Newitt, John H., Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Electronic goniometer for radio direction finders. 2,450,014, Sept. 28.

Noguera, Joseph, Prestwich, Manchester, assignor to Casablancas High Draft Company Limited, Salford, Manchester, England. Collector for textile drafting mechanisms. 2,450,251, Sept. 28.

Nokes, Philip E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Area measuring machine using light beams. 2,450,054, Sept. 28.

Nord, Eric T., assignor to U. S. Automatic Corporation, Amherst, Ohio. Milling mechanism. 2,450,350, Sept. 28.

Nord, Friedrich F., New York, N. Y. Food composition containing fusaria. 2,450,055, Sept. 28.

Northern Ordnance Incorporated, assignee: *See*—
Hawley, John B., Jr.

Norton Company, assignee: *See*—
Beth, Hugo W. H.
Bush, Alonzo O.
Indge, Herbert S.

Odegaard, Norman N. O., McHenry, N. Dak. Steerable wheel shock absorber. 2,450,015, Sept. 28.

Office Furniture & Fixtures, Inc., assignee: *See*—
Blazey, Lawrence E.

Ogan, Elmer B., Charlotte, N. C. Tail set harness. 2,450,379, Sept. 28.

Oliver, Herbert F., West Springfield, assignor to The F. W. Sickles Company, Chicopee, Mass. Securing device. 2,450,252, Sept. 28.

Ornstein, Harry, assignee, et al.: *See*—
Selden, Herman.

Osecrowsky, Harold L., Bay City, Mich. Valve puller. 2,450,293, Sept. 28.

Osterhoudt, Walter J., Houston, Tex. Shock absorber. 2,450,154, Sept. 28.

Osterlund, Soren B.: *See*—
De Giers, Clarence A., and Osterlund.

Owen, Carlton N.: *See*—
Kesler, Carl C., Black, Hicks, and Owen.

Owens-Corning Fiberglas Corporation, assignee: *See*—
Slayter, Games and Fletcher.

Packard Motor Car Company, assignee: *See*—
Ware, Marsden.

Packwood, George H., Jr., St. Louis, Mo. Soap powder dispenser. 2,450,155, Sept. 28.

Paden, William L.: *See*—
Christian, Raymond, Ganger, and Paden.

Palotsee, John J., Youngstown, Ohio. Hone adapter. 2,450,294, Sept. 28.

Parker Appliance Company, The, assignee: *See*—
Parker, Arthur L. and H. M., and Melichar.
Vandervoort, Lorain N.

Parker, Arthur L., deceased, Cleveland, by H. M. Parker, Shaker Heights, executrix, and J. F. Melichar, assignors to The Parker Appliance Company, Cleveland, Ohio. Engine primer. 2,450,295, Sept. 28.

Parker, Helen M., executrix: *See*—
Parker, Arthur L. and H. M., and Melichar.

Parnell, Edwin H., Sr., Greenville, S. C. Fishing lure. 2,450,253, Sept. 28.

Partridge, Maurice W.: *See*—
Short, Wallace F., and Partridge.

Parveau, Lucien: *See*—
Boucher, Auguste, and Parveau.

Passal, Frank, now by judicial change of name: *See*—
Passalacqua, Frank.

Passalacqua, Frank, now by judicial change of name, F. Passal, Detroit, Mich., assignor to United Chromium, Incorporated, New York, N. Y. Method of producing articles having fissured chromium surface electrodeposits. 2,450,296, Sept. 28.

Payne, John W., P. D. Valas, E. H. Atwood, Woodbury, and E. V. Bergstrom, Short Hills, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Apparatus for washing gel pellets. 2,450,351, Sept. 28.

Pearse, John P., Swanton, and W. P. Bamford, Maumee, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Apparatus for bending glass. 2,450,297, Sept. 28.

Pechukas, Alphonse, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Process of and apparatus for producing titanium dioxide. 2,450,156, Sept. 28.

Peckett, Samuel C., Toronto, Ontario, Canada. Means for preparing true surfaces. 2,450,157, Sept. 28.

Penick & Ford, Ltd., Incorporated, assignee: *See*—
Kesler, Carl C., Black, Hicks, and Owen.

Pennell, Ford, assignor to J. B. Pennell, Webster Groves, Mo. Connector bolt. 2,450,158, Sept. 28.

Pennell, Jane B., assignee: *See*—
Pennell, Ford.

Perham, James A., Aurora, assignor to Independent Pneumatic Tool Company, Chicago, Ill. Switch handle for portable electric tools. 2,450,380, Sept. 28.

Peterson, Carl D., and A. H. Deimel, assignors to Dana Corporation, Toledo, Ohio. Transmission mechanism. 2,450,056, Sept. 28.

Peterson, Fred W., El Centro, Calif., and O. S. Kirschner, Vashon, Wash. Clavicle splint. 2,450,298, Sept. 28.

Petrolite Corporation, Ltd., assignee: *See*—
De Groote, Melvin.
De Groote, Melvin, and Wirtel.

Pettibone Mulliken Corporation, assignee: *See*—
Piper, Walter F., and Soldat.

Phileo Corporation, assignee: *See*—
Shoemaker, Malcolm G.

Phillips Petroleum Company, assignee: *See*—
Frey, Frederick E.
Piety, Raymond G.

Pickslay, William M., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Control system. 2,450,159, Sept. 28.

Pierce, Robert E.: *See*—
Bemis, Farwell G., and Pierce.

Piety, Raymond G., Yonkers, N. Y., assignor to Phillips Petroleum Company. Seismic-wave correction means and method. 2,450,352, Sept. 28.

Pinkel, Isadore I., Cleveland, Ohio. High-voltage foam breaker. 2,450,016, Sept. 28.

Piper, Walter F., and J. J. Soldat, Chicago, Ill., assignors, by mesne assignments, to Pettibone Mulliken Corporation. Portable molding sand muller, including suspendable power-driven muller unit and underlying portable bowl receptacle. 2,450,299, Sept. 28.

Pittsburgh Plate Glass Company, assignee: *See*—
Knudsen, Percy E.
Pechukas, Alphonse.

Place Process, Inc., assignee: *See*—
Place, Robert.

Place, Robert, Glen Cove, N. Y., assignor to Place Process, Inc., Washington, D. C. Producing animated cartoons. 2,450,017, Sept. 28.

Powers, Paul O.: *See*—
Weber, Karl H., and Powers.

Powers Photo Engraving Company, assignee: *See*—
Maisch, George.

Preisman, Albert, Flushing, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Radio monitoring system. 2,450,018, Sept. 28.

Price, Earl R., assignor to Bendix Aviation Corporation, South Bend, Ind. Pressure fluid operated pressure intensifier. 2,450,160, Sept. 28.

Price, Earl R., assignor to Bendix Aviation Corporation, South Bend, Ind. Clutch control mechanism. 2,450,161, Sept. 28.

Pridy, Whetstine B., Long Beach, Calif. Truck body and bolster. 2,450,204, Sept. 28.

Prime Manufacturing Company, The, assignee: *See*—
Moore, Sidney A.

Pritchard, Franklin H., Erie, Pa., assignor to General Electric Company. Traction motor control system. 2,450,300, Sept. 28.

Promen, William N., Chicago, Ill. Golf practice device. 2,450,162, Sept. 28.

Pugh, William J., assignee: *See*—
Vetrano, Louis F.

Pullen, Rodney S., Akron, Ohio, assignor to Pullenlite Company, Philadelphia, Pa. Match comb handling conveyer. 2,450,163, Sept. 28.

Pullenlite Company, assignee: *See*—
Pullen, Rodney S.

Puls, Alfred E., Cleveland, Ohio, and E. R. Swenson, assignors to Metropolis Bending Company, Metropolis, Ill. Folding table. 2,450,353, Sept. 28.

Puryear, Oney P.: *See*—
Ashburn, Harry V., Barnett, and Puryear.
Ashburn, Harry V., and Puryear.

Puryear, Oney P., Fishkill, and H. V. Ashburn, Glenham, assignors to The Texas Company, New York, N. Y. Lithium base grease and method of preparing the same. 2,450,254, Sept. 28.

Puryear, Oney P., Fishkill, and H. V. Ashburn, Glenham, assignors to The Texas Company, New York, N. Y. Method of preparing lithium base greases. 2,450,255, Sept. 28.

Quayle, George, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Control lever. 2,450,354, Sept. 28.

Quiggle, Edgar J., Shelby, Ohio. Folding baby seat. 2,450,301, Sept. 28.

Radio Corporation of America, assignee: *See*—
Barton, Loy E.
Hershberger, William D.
Schoenfeld, Earl.
Wright, Antony.

Ralph, Sydney J., and G. A. Dummett, Point Pleasant, Wandsworth, London, assignors to The Aluminum Plant & Vessel Company Limited, London, England. Treatment by azeotropic distillation of complex mixtures. 2,450,381, Sept. 28.

Ramsay, Frank R. F., assignor to D. Napier & Son Limited, London, England. Means for testing electrical ignition systems of internal-combustion engines. 2,450,164, Sept. 28.

Randall, Harold O., and J. B. Geers, deceased, Dayton, by J. H. More, administrator, Cincinnati, assignors to The National Cash Register Company, Dayton, Ohio. Cash register. 2,450,165, Sept. 28.

Raney, Russell R.: *See*—
Crumb, Charles F., Kaupke, Raney, and Smith.

Ranger, Richard H., United States Army, Newark, N. J. Frequency modulated oscillator control. 2,450,019, Sept. 28.

Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.

Redmond Company, Inc., assignee: *See*—
Schirmer, Cyrus T., and Knobel.

Reichold, Ludwig, Winsted, assignor to The Silex Company, Hartford, Conn. Ironing board having steam generating means. 2,450,092, Sept. 28.

Reik, Richard, Piedmont, Calif. Process for recovering magnesium from magnesia-containing materials. 2,450,057, Sept. 28.

Ribbesford Company Limited, The, assignee: *See*—
Thornhill, Peter W.

Ricardo, Harry R., London, England. Internal-combustion engine. 2,450,382, Sept. 28.

Rich, Nicholas S., Milwaukee, Wis. Electrical detection apparatus. 2,450,166, Sept. 28.

Richards, Edward A., L. J. Ellison, and F. Gray, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Manufacture of rectifier disks. 2,450,020, Sept. 28.

Richardson, George K., Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Spent ammunition eliminating means. 2,450,058, Sept. 28.

Richardson, Harry C., assignor to The Troy Sunshade Company, Troy, Ohio. Coach or bus seat. 2,450,093, Sept. 28.

Richey, Paul E.: *See*—
Burrell, James H., and Richey.

Rickerson, Floyd K., assignor of one-fourth to A. Lobe, Seattle, Wash. Diaper having disposable inserts. 2,450,059, Sept. 28.

Ring, Roland, Houston, Tex., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa. Well surveying instrument. 2,450,060, Sept. 28.

Risch, Werner, Zurich, Switzerland. Method and machine for producing propellers, ships' screws, and the like. 2,450,383, Sept. 28.

Robbins, David S., Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey. Braided sling. 2,450,355, Sept. 28.

Robbins, David S., Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey. Braided sling and method of making same. 2,450,356, Sept. 28.

Roberts, Kenneth C., Clayton, assignor to The Anchor Chemical Company Limited, Manchester, Lancashire, England. Manufacture of factice and sulfurized oils. 2,450,384, Sept. 28.

Robertshaw-Fulton Controls Company, assignee: *See*—
Cate, Paul E.

Robinson, George C., Los Angeles, Calif. Device for trisecting angles. 2,450,167, Sept. 28.

Robinson, Reuben C.: *See*—
White, Ernest T., and Robinson.

Rockwell Manufacturing Company, assignee: *See*—
Bergman, Charles P.

Roethel Engineering Corporation, assignee: *See*—
Roethel, John H.

Roethel, John H., assignor to Roethel Engineering Corporation, Detroit, Mich. Locking mechanism. 2,450,357, Sept. 28.

Rohm & Haas Company, assignee: *See*—
Hester, William F., and Craig.

Romano, Pasquale, Norwalk, Conn. Line tightener and fastener. 2,450,358, Sept. 28.

Rose, William H., Jersey City, N. J.; Hudson County National Bank, executor of said W. H. Rose, deceased. Compressible powder dispenser. 2,450,205, Sept. 28.

Rowe, Raymond N., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch. 2,450,256, Sept. 28.

Rowe, Robert F., Fort Wayne, Ind., assignor to General Electric Company. Fluorescent ballast bracket. 2,450,302, Sept. 28.

Rüsch, Gustav O. K.: *See*—
Christiansen, Christian, and Rüsch.

Ryde, John L.: *See*—
McCulloch, Robert P., Ryde, and Gudmundsen.

Salem Engineering Company, The, assignee: *See*—
Buckholot, Robert E.

Sanders, Marion D., Washington, D. C., assignor to Swift & Company, Chicago, Ill. Flotation of bone particles. 2,450,398, Sept. 28.

Sanderson, Robert L., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Grip. 2,450,094, Sept. 28.

Sargent, William C., assignor to National Battery Company, St. Paul, Minn. Battery plate-connecting strap. 2,450,359, Sept. 28.

Sasgen, Anthony M., assignor to Grand Specialties Company, Chicago, Ill. Clamping device of the vise type. 2,450,303, Sept. 28.

Schirmer, Cyrus T., Wayland, and M. Knobel, Arlington, Mass., assignors, by mesne assignments, to Redmond Company, Inc. Automatic door operator. 2,450,021, Sept. 28.

Schoenfeld, Earl, Mamaroneck, N. Y., assignor to Radio Corporation of America. Timing marker and station selection apparatus. 2,450,360, Sept. 28.

Scholes, Richard T., Hinsdale, Ill. Spike fastening means for railway tracks. 2,450,361, Sept. 28.

Schreiner, George A., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y. Cloth finishing. 2,450,022, Sept. 28.

Schumock, Albert J., Washington, D. C. Plasterer's featheredge device. 2,450,385, Sept. 28.

Schwartz, Julius, Astoria, N. Y. Undergarment. 2,450,168, Sept. 28.

Scott, William H., Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey. Device for electric resistance heating of metals and controls therefor. 2,450,362, Sept. 28.

Scovill Manufacturing Company, assignee: *See*—
Donahue, Patrick F.

Searle, G. D., & Co., assignee: *See*—
Cusic, John W.

Sedwick, Matthew M.: *See*—
Kronquest, Alfred L., and Sedwick.

Seebold, James E., assignor to Standard Oil Company, Chicago, Ill. Corrosion prevention. 2,450,095, Sept. 28.

Selden, Herman, Plainfield, N. J., assignor of one-third to A. M. Hartman, New York, and one-third to H. Ornstein, Brooklyn, N. Y. Hat sweatband. 2,450,169, Sept. 28.

Shankland, Rodney V.: *See*—
Brown, Henry T., and Shankland.

Shaver, Forrest W.: *See*—
Gresham, Thomas L., and Shaver.

Sheidler, Robert G., assignor to The Tappan Stove Company, Mansfield, Ohio. Indicator for electric ranges. 2,450,399, Sept. 28.

Shell Development Company, assignee: *See*—
Evans, Theodore W., and Shokal.

Shiflet, William E., St. Clair Shores, Mich. Outboard motor dolly. 2,450,304, Sept. 28.

Shoemaker, Malcolm G., Doylestown, assignor to Philco Corporation, Philadelphia, Pa. Partition for refrigerators. 2,450,305, Sept. 28.

Shokal, Edward C.: *See*—
Evans, Theodore W., and Shokal.

Short, Wallace F., and M. W. Partridge, assignors to Boots Pure Drug Company Limited, Nottingham, England. Manufacture of compounds containing amidine groups. 2,450,386, Sept. 28.

Shouse, James F., Moline, Ill. Golf teeing apparatus. 2,450,206, Sept. 28.

Sickles, F. W., Company, The, assignee: *See*—
Oliver, Herbert F.
Sickles, Royal F.

Sickles, Royal F., Springfield, assignor to The F. W. Sickles Company, Chicopee, Mass. Securing device. 2,450,306, Sept. 28.

Siekmann, Harold J., Cincinnati, and W. A. Kimsey, Mariemont, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Automatic step turning lathe. 2,450,096, Sept. 28.

Silex Company, The, assignee: *See*—
Reichold, Ludwig.

Silverman, Alexander, Pittsburgh, Pa. Nail file. 2,450,207, Sept. 28.

Simmon Brothers, Inc., assignee: *See*—
Simmon, Alfred, and Weisglass.
Weisglass, Louis L.

Simmon, Alfred, Jackson Heights, and L. L. Weisglass, New York, assignors to Simmon Brothers, Inc., Long Island City, N. Y. Device to make test prints of photographic color print material by three nonuniform part exposures of a test triangle to three colors. 2,450,307, Sept. 28.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Reel mechanism. 2,450,257, Sept. 28.

Singleton, Gray, Lakeland, Fla. Processing fruit juices. 2,450,097, Sept. 28.

Skolnik, Max, assignor to Fibro-Mold Specialties, Inc., Chicago, Ill. Plastic composition and wallboard made therefrom. 2,450,258, Sept. 28.

Slater, Thomas H., Fairview, Ill. Filter. 2,450,208, Sept. 28.

Slayter, Games, and E. Fletcher, Newark, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio. Method and apparatus for making fine glass fibers. 2,450,363, Sept. 28.

Smith, A. O., Corporation, assignee: *See*—
Boatwick, Fred D.
Hariamoff, Anatol J.
Uhri, William C.

Smith, Arnold A., Three Rivers, Quebec, Canada, assignor to International Paper Company, New York, N. Y. Electric boiler. 2,450,061, Sept. 28.

Smith, Frank W., Wellesley, Mass., assignor to The Superheater Company, New York, N. Y. Fine washing nozzle having fluid valve operated simultaneously with seal in flue. 2,450,308, Sept. 28.

Smith, George G., assignor to R. L. Kahn, Chicago, Ill., as trustee. Fitting. 2,450,170, Sept. 28.

Smith, Lewis E.: *See*—
Crumb, Charles F., Kaupke, Raney, and Smith.

Smith, Marvin A., Western Springs, assignor to Universal Oil Products Company, Chicago, Ill. Mercury vacuum still. 2,450,098, Sept. 28.

Smith, Sidney B., Hollis, N. Y. Wrapper for frozen confections. 2,450,364, Sept. 28.

Societe Anonyme des Tubes de Valenciennes & Denain, assignee: *See*—
Gillet, Eugene C.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Payne, John W., Valas, Atwood, and Bergstrom.
White, Ernest T., and Robinson.

Sohn, Allen O., Plymouth, Wis. Side gripper for square bottomed paper bag forming machines. 2,450,309, Sept. 28.

Soldat, Joseph J.: *See*—
Piper, Walter F., and Soldat.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device of the magnetron type. 2,450,023, Sept. 28.

Sperry Corporation, The, assignee: *See*—
Devol, George C.

Sperry-Sun Well Surveying Company, assignee: *See*—
Ring, Roland.

Sperzel Company, assignee: *See*—
Sperzel, Peter J.

Sperzel, Peter J., assignor to Sperzel Company, Minneapolis, Minn. Hinge construction for toilet seats. 2,450,209, Sept. 28.

Spicer, William E.: *See*—
Voorhies, Alexis, Jr., and Spicer.

Sporing, Percy A., Hampton Hill, and C. P. Johnson, Hanwell, assignors to The Telegraph Condenser Company Limited, North Acton, England. Tubular container for electrical condensers or other apparatus. 2,450,310, Sept. 28.

Sprague, Howard L., New York, N. Y. String depressor for stringed musical instruments. 2,450,210, Sept. 28.

Springfield Metallic Casket Co., Inc., The, assignee: *See*—
Kendall, Floyd J.

Payne, John W., Valas, Atwood, and Bergstrom.

Valiton, Frederick H., assignor of one-half to C. L. Colbert, Deer Lodge, Mont. Top milk extractor. 2,450,313, Sept. 28.

Vandervoort, Lorain N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for flareless tubes. 2,450,314, Sept. 28.

Veneklasen, Paul S., and N. A. Watson, Los Angeles, Calif., assignors to the United States of America. Material for use in the manufacture of ear defenders and the like. 2,450,101, Sept. 28.

Verwaltungsgesellschaft der Werkzeugmaschinenfabrik Oerlikon, assignee: *See*—
Wernli, Max.

Vetrano, Louis F., assignor of three-fourths to W. J. Pugh, Oakland, Calif. Beer faucet. 2,450,315, Sept. 28.

Victor Metal Products Corporation, assignee: *See*—
Jung, Albert H.

Victorero, Francisco A., Cardenas, Cuba. Apparatus for continuous fermentation. 2,450,218, Sept. 28.

Voorhies, Alexis, Jr., and W. E. Spicer, Baton Rouge, La., assignors to Standard Oil Development Company. Preparation of catalyst for use in destructive hydrogenation of hydrocarbon oils. 2,450,316, Sept. 28.

Voorhies, Alexis, Jr., and W. E. Spicer, Baton Rouge, La., assignor to Standard Oil Development Company. Nickel-impregnated clay catalyst and process of making same. 2,450,317, Sept. 28.

Voss, Grace, New York, N. Y., and V. G. Ellis, Montclair, N. J. Caster guard. 2,450,062, Sept. 28.

Wagamon, Richard E., Harbeson, Del. Method for producing poultry feeds. 2,450,318, Sept. 28.

Wagner, Gustave H.: *See*—
Wagner, Harold A. and G. H.

Wagner, Harold A. and G. H., Portland, Oreg. Material lifting and transporting vehicle. 2,450,102, Sept. 28.

Ward, Herbert H., Grange-over-Sands, England. Treatment of flour for controlling its strength. 2,450,260, Sept. 28.

Ware, Marsden, Huntington Woods, assignor to Packard Motor Car Company, Detroit, Mich. Dual drive mechanism. 2,450,214, Sept. 28.

Warner, Arthur J., South Orange, and T. H. Talbot, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Dimerization of alpha-alkyl para-alkyl styrenes. 2,450,027, Sept. 28.

Watson, Norman A.: *See*—
Veneklasen, Paul S., and Watson.

Weaver, Jerald D., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Turnover record changer. 2,450,402. Sept. 28.

Weber, Karl H., Lancaster, and P. O. Powers, Manheim Township, Lancaster County, assignors to Armstrong Cork Company, Lancaster, Pa. Dimethyl styrene polymerization products and their preparation. 2,450,028, Sept. 28.

Webster, Warren, & Company, assignee: *See*—
Morgan, David E.

Weinrich, William W., Bartlesville, Okla., C. A. Holloway, Jr., Oakmont, Pa., and W. S. Bonnell, Port Arthur, Tex., assignors to Gulf Research & Development Company, Pittsburgh, Pa. Catalytic contact process. 2,450,174, Sept. 28.

Weisglass, Louis L.: *See*—
Simmon, Alfred, and Weisglass.

Weisglass, Louis L., New York, assignor to Simmon Brothers, Inc., Long Island City, N. Y. Photoelectric exposure meter for enlargers using differential means to indicate contrast. 2,450,319, Sept. 28.

Wells, Franklin B., Verona, N. J., assignor to Ellis-Foster Company. Process of making sulfurized jojoba oil. 2,450,403, Sept. 28.

Wells, William S., Palo Alto, assignor to P. S. Linforth, San Francisco, Calif. Compressed air gun. 2,450,029, Sept. 28.
Wendt, Harry C., Lynnfield, Mass., assignor to General Electric Company. Variable air gap turn compensator. 2,450,320, Sept. 28.
Werner, Siegmund, New York, N. Y. Swivel head for ski pole rings. 2,450,063, Sept. 28.
Wernli, Max, Schaffhausen, Switzerland, assignor to Verwaltungsgesellschaft der Werkzeugmaschinenfabrik Oerlikon, Zurich-Oerlikon. Barrel and breech ring with spring means for connecting the same. 2,450,064, Sept. 28.
West, Russell L., Montreal, Quebec, Canada, assignor, by mesne assignments, to Link Aviation, Inc., Binghamton, N. Y. Training equipment for aviators. 2,450,261, Sept. 28.
Western Union Telegraph Company, The, assignee: *See*—
Wise, Raleigh J.
White, Ernest T., Jackson Heights, and R. C. Robinson, New York, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated. Rust-inhibiting greases. 2,450,321, Sept. 28.
Wildt and Company Limited, assignee: *See*—
Holmes, Henry H.
Williams, Jerry D., Ninnekah, Okla. Apparatus and method for seismographic exploration shooting. 2,450,366, Sept. 28.
Williams, Ralph F., Hazelton, Kans. Replacement axle for agricultural implements or the like. 2,450,372, Sept. 28.
Williamson, Stuart, Reading, England. Delay action control switch. 2,450,323, Sept. 28.
Willmott, Herbert J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Drilling machine. 2,450,065, Sept. 28.
Willmott, Herbert J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Guide for drill chucks. 2,450,066, Sept. 28.
Wilson, Oran C., Lakewood, and P. S. Britton, Bratenahl, Ohio. Apparatus for coiling thermoplastic material. 2,450,324, Sept. 28.
Wilson, William A., Glendale, Calif. Dolly for trailers and the like. 2,450,215, Sept. 28.
Winslow, Fred H., and W. S. Hammond, Waco, Tex. Reversing drive mechanism. 2,450,262, Sept. 28.
Wirtel, Arthur F.: *See*—
De Groote, Melvin, and Wirtel.
Wirth, Emil O., South Bend, Ind., and W. E. Leibing, Detroit, Mich.; said Wirth assignor to Bendix Aviation Company, South Bend, Ind.; said Leibing assignor to Leibing-Fageol Company, Detroit, Mich. Fuel system for starting. 2,450,175, Sept. 28.
Wise, Frederic E., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Electric temperature device. 2,450,263, Sept. 28.
Wise, Raleigh J., Dunellen, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Facsimile telegraph system and apparatus. 2,450,030, Sept. 28.
Wolf, Alexander, Houston, Tex., assignor to The Texas Company, New York, N. Y. Method of logging boreholes. 2,450,265, Sept. 28.
Wolff, Harry J. D., Van Nuys, assignor to E. A. Huntley, Burbank, Calif. Knitting device. 2,450,067, Sept. 28.
Wood Newspaper Machinery Corporation, assignee: *See*—
Tollison, Paul L.
Woodman, Charles K., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Toe rest. 2,450,068, Sept. 28.
Woodman, Charles K., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Welt pressing means for sole attaching machines. 2,450,069, Sept. 28.
Woodruff, Albert N., Washington, D. C. Clock. 2,450,264, Sept. 28.
Wright, Antony, Drexel Hill, Pa., assignor to Radio Corporation of America. Compensating device. 2,449,969, Sept. 28.
Wright, Bruce R., Lakewood, assignor to Centrifix Corporation, Cleveland, Ohio. Marine sea chest sand separator. 2,450,070, Sept. 28.
Yale & Towne Manufacturing Company, The, assignee: *See*—
Quayle, George.
Yardeny, Michel N., New York, N. Y. Synchronous preset remote control system. 2,450,071, Sept. 28.
Zavaleta, Adolfo C. S., Buenos Aires, Argentina. Paint paste. 2,450,072, Sept. 28.
Zirin, Samuel, Brooklyn, N. Y. Outdoor card game device. 2,450,325, Sept. 28.
Zschiegner, Herbert E., Ocean Grove, N. J., assignor to E. Honig, Brooklyn, N. Y. Preparation of palladium oxide. 2,450,176, Sept. 28.

LIST OF DESIGN INVENTIONS

Awning, Sun-bathing. O. D. Koski. 151,155, Sept. 28.
Battery charging machine or similar article. A. C. Blevins. 151,117, Sept. 28.
Bracelet or similar article. A. Philippe. 151,186, Sept. 28.
Bracket for an electrical fixture, Mounting. C. D. McCann. 151,161, Sept. 28.
Brooch or similar article. A. Katz. 151,133, Sept. 28.
Brooch or similar article. A. Katz. 151,137, Sept. 28.
Brooch or similar article. A. Katz. 151,140, Sept. 28.
Brooch or similar article. A. Katz. 151,142, Sept. 28.
Brooch or similar article. A. Katz. 151,144, Sept. 28.
Brooch or similar article. A. Katz. 151,146–7, Sept. 28.
Brooch or similar article. A. Katz. 151,149, Sept. 28.
Brooch or similar article. O. Pennino. 151,163, Sept. 28.
Brooch or similar article. A. Philippe. 151,169–74, Sept. 28.
Brooch or similar article. A. Philippe. 151,177–81, Sept. 28.
Brooch or similar article, Separable. A. Katz. 151,151, Sept. 28.
Cigarette lighter. R. Wolanske. 151,202, Sept. 28.
Clip or similar article. A. Philippe. 151,176, Sept. 28.
Coat. G. Reiter. 151,190, Sept. 28.
Door pull. L. L. Kadieck. 151,131, Sept. 28.
Drainer, Bottle. H. Roe. 151,192, Sept. 28.
Dress ensemble. J. F. Strassner. 151,197, Sept. 28.
Ear clip finding. K. F. Hoeckele. 151,130, Sept. 28.
Earring or similar article. A. Katz. 151,132, Sept. 28.
Earring or similar article. A. Katz. 151,134–6, Sept. 28.
Earring or similar article. A. Katz. 151,138–9, Sept. 28.
Earring or similar article. A. Katz. 151,141, Sept. 28.
Earring or similar article. A. Katz. 151,143, Sept. 28.
Earring or similar article. A. Katz. 151,145, Sept. 28.
Earring or similar article. A. Katz. 151,148, Sept. 28.
Earring or similar article. A. Katz. 151,150, Sept. 28.
Earring or similar article. A. Katz. 151,152–4, Sept. 28.
Earring or similar article. A. Philippe. 151,164–8, Sept. 28.
Earring or similar article. A. Philippe. 151,175, Sept. 28.
Earring or similar article. A. Philippe. 151,182, Sept. 28.
Earring or similar article. A. Philippe. 151,184, Sept. 28.
Earring or similar article. A. Philippe. 151,187, Sept. 28.
Fishing reel. L. S. Elsinger. 151,120, Sept. 28.
Frame, Swing end. W. I. Smith. 151,196, Sept. 28.
Game board. J. Scarne. 151,193, Sept. 28.
Game board, Bowling. H. M. Wescott. 151,200, Sept. 28.
Hat. G. H. Hodge. 151,127–9, Sept. 28.
Heater. R. E. Kruck. 151,156–8, Sept. 28.
Holder, Fruit. M. J. Manca. 151,160, Sept. 28.
Lolly pop. G. Goodes. 151,124, Sept. 28.
Necklace or similar article. A. Philippe. 151,183, Sept. 28.
Necklace or similar article. A. Philippe. 151,185, Sept. 28.
Negligee. V. Giovagnoni. 151,123, Sept. 28.
Negligee. A. Macksoud. 151,159, Sept. 28.
Ornament, Table. C. W. Biener. 151,116, Sept. 28.
Perfume bottle. E. Gordon and H. Sanders. 151,125, Sept. 28.
Pool board, Rack. H. M. Wescott. 151,201, Sept. 28.
Ring, Finger. R. H. Taylor. 151,198, Sept. 28.
Shelf or similar article, Wall. S. K. Wolff. 151,203, Sept. 28.
Sprinkler, Traveling lawn. B. J. Borgerson. 151,118, Sept. 28.
Stand, electric heater, and fan, Combined. J. T. Rausch and G. Towne. 151,189, Sept. 28.
Stool or similar article. E. V. and V. E. Price. 151,188, Sept. 28.
Suit. G. Reiter. 151,191, Sept. 28.
Suit. B. Schultz. 151,194–5, Sept. 28.
Support for a soap tray or the like. F. A. Hilenski. 151,126, Sept. 28.
Table. C. Eames. 151,119, Sept. 28.
Table. J. L. Metz. 151,162, Sept. 28.
Tail light and end piece for motorcycle fenders, Combined. H. Firth. 151,122, Sept. 28.
Telephone desk unit. C. E. Erickson. 151,121, Sept. 28.
Tub filler with transfer unit for diverting water to shower. A. L. Thomssen. 151,199, Sept. 28.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF SEPTEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive machine. H. S. Indge. 2,450,237, Sept. 28.
Accounting machine. R. A. Christian, J. R. Ganger, and W. L. Paden. 2,450,121, Sept. 28.
Accumulator. A. Berger. 2,450,031, Sept. 28.
Acids from lactones, Preparation of substituted. T. L. Gresham. 2,449,987, Sept. 28.
Adapter, Hone. J. J. Palotsee. 2,450,294, Sept. 28.
Air charger for storage tanks. S. M. McCarthy. 2,450,291, Sept. 28.
Air conditioning grille or register assembly. H. E. Coleman. 2,450,184, Sept. 28.
Aircraft barrier. R. B. Cotton. 2,450,328, Sept. 28.
Aircraft wheel and tire. A. M. Stanley. 2,450,259, Sept. 28.
Air gun, Compressed. W. S. Wells. 2,450,029, Sept. 28.
Alloy for metal evaporation, Silver base. F. R. Hensel and E. I. Larsen. 2,450,340, Sept. 28.
Aminoalkyl-9,10-dihydroanthryl ketones. J. W. Cusic. 2,450,122, Sept. 28.
Amino-substituted acridines, Making. H. J. Barber. 2,450,367, Sept. 28.
Ammunition eliminating means, Spent. G. K. Richardson. 2,450,058, Sept. 28.
Amplifier, Second harmonic nonlinear. O. W. Livingston. 2,450,286, Sept. 28.
Antenna pattern tracer. M. L. Jones. 2,450,283, Sept. 28.
Antenna system for defining glide paths. L. J. Heaton-Armstrong. 2,449,999, Sept. 28.
Antiskid chain. E. P. Harold. 2,450,042, Sept. 28.
Apparatus and method for seismographic exploration shooting. J. D. Williams. 2,450,366, Sept. 28.
Apparatus for bending glass. J. P. Pearse and W. P. Bamford. 2,450,297, Sept. 28.
Apparatus for coiling thermoplastic material. O. C. Wilson and P. S. Britton. 2,450,324, Sept. 28.
Apparatus for continuous fermentation. F. Victorero. 2,450,218, Sept. 28.
Apparatus for engraving tombstones and the like. W. H. Thompson. 2,450,401, Sept. 28.
Apparatus for producing rock wool. O. J. Nelson. 2,450,013, Sept. 28.
Apparatus for reducing noise in microphone circuits. J. F. Andrews. 2,449,971, Sept. 28.
Apparatus for the treatment of textile strands. T. Jackson and F. B. Hill. 2,450,045, Sept. 28.
Apparatus for washing gel pellets. J. W. Payne, P. D. Valas, E. H. Atwood, and E. V. Bergstrom. 2,450,351, Sept. 28.
Applicator, Tampon. K. J. Harwood. 2,450,138, Sept. 28.
Arrangement for grinding and dressing machines, Work support. E. F. Hager. 2,450,135, Sept. 28.
Art device. H. J. Gardener and W. A. Blome. 2,450,127, Sept. 28.
Articles having fissured chromium surface electrodeposits, Producing. F. Passalacqua. 2,450,296, Sept. 28.
Aryl substituted ethylenic compounds, Production of. J. K. Dixon and D. R. May. 2,450,334, Sept. 28.
Automatic manually controlled clutch. C. L. Knott. 2,450,048, Sept. 28.
Auxiliary utility cabinet. F. T. Hearst. 2,450,337, Sept. 28.
Aviation trainer. K. A. Kail. 2,450,239, Sept. 28.
Axle for agricultural implements or the like. Replacement. R. F. Williams. 2,450,322, Sept. 28.
Axle, Multiple-speed. F. W. Avila. 2,450,073, Sept. 28.
Baler, Pickup. C. F. Crumb, L. H. Kaupke, R. R. Raney, and L. E. Smith. 2,450,082, Sept. 28.
Band tester, Rotating. P. W. Klipsch. 2,450,003, Sept. 28.
Band, Wrist watch. R. L. Hamilton. 2,450,136, Sept. 28.
Bar conditioner, Chain-saw. A. F. Stone and E. A. Hayden. 2,450,211, Sept. 28.
Bearing: *See*—
Resilient sash bearing.
Beta acyloxy acyl halides from beta lactones. T. L. Gresham and F. W. Shaver. 2,449,994, Sept. 28.
Beta-acyloxy carboxylic acid compounds and preparing the same. T. L. Gresham and J. E. Jansen. 2,449,990, Sept. 28.
Beta-aroxy carboxylic acids, Preparation of. T. L. Gresham and F. W. Shaver. 2,449,991, Sept. 28.
Beta-halo carboxylic acids, Preparation of. T. L. Gresham and F. W. Shaver. 2,449,993, Sept. 28.
Beta-lactones, Preparation of. J. R. Caldwell. 2,450,116, Sept. 28.
β-lactones, Preparation of. J. R. Caldwell. 2,450,117, Sept. 28.
β-lactones, Preparation of. J. R. Caldwell. 2,450,118, Sept. 28.
β-lactones, Preparation of. H. J. Hagemeyer, Jr. 2,450,132, Sept. 28.
β-lactones, Preparation of. H. J. Hagemeyer, Jr. 2,450,134, Sept. 28.
β-lactones, Preparing. H. J. Hagemeyer, Jr. 2,450,131, Sept. 28.
Beta-thio carboxylic acid compounds, Preparation of. T. L. Gresham and F. W. Shaver. 2,449,992, Sept. 28.
Beta-thio carboxylic acids, Preparation of. T. L. Gresham. 2,449,989, Sept. 28.
Beverage device. F. P. Allen. 2,450,177, Sept. 28.
Bleaching by hydrosulfite, Groundwood. H. J. Cronin. 2,450,034, Sept. 28.
Blowing apparatus, Oil well. J. B. Hawley, Jr. 2,450,140, Sept. 28.
Bobbin lifter. R. J. Bartholomew. 2,450,074, Sept. 28.
Body and bolster, Truck. W. B. Pridy. 2,450,204, Sept. 28.
Boiler: *See*—
Electric boiler.
Bolt, Connector. F. Pennell. 2,450,158, Sept. 28.
Box. S. B. De Mian. 2,450,035, Sept. 28.
Bracket: *See*—
Fluorescent ballast bracket.
Brake shoe adjusting gauge. J. M. Houston. 2,450,196, Sept. 28.
Burr-cutting tool. L. A. Basbara. 2,450,075, Sept. 28.
Cabinet: *See*—
Auxiliary utility cabinet.
Cabinet for electric organs, Tone. B. Hartsough. 2,450,139, Sept. 28.
Cable clamp. R. T. Lawry. 2,450,147, Sept. 28.
Cam actuator, Adjustable. K. G. Strunk and T. A. Lelek. 2,450,311, Sept. 28.
Cap: *See*—
Uniform cap.
Cap for wood posts, poles, and the like, Protective. W. M. Kervin. 2,450,345, Sept. 28.
Cap stayer, Folding uniform. I. and H. Libshutz. 2,450,148, Sept. 28.
Carburetor device. F. A. Kommer and R. W. Boehlow. 2,450,049, Sept. 28.
Card envelope and a card holder with detent retaining means, Cooperating. C. Lomholt. 2,450,008, Sept. 28.
Card game device, Outdoor. S. Zirin. 2,450,325, Sept. 28.
Carriage construction, Baby. F. Manning. 2,450,051, Sept. 28.
Cartoons, Producing animated. R. Place. 2,450,017, Sept. 28.
Caster unit. L. E. Blazey. 2,450,228, Sept. 28.
Catalyst for use in destructive hydrogenation of hydrocarbon oils, Preparation of. A. Voorhies, Jr. and W. E. Spicer. 2,450,316, Sept. 28.
Catalytic contact process. W. W. Weinrich, C. A. Holloway, Jr., and W. S. Bonnell. 2,450,174, Sept. 28.
Centrifugal pump provided with diffuser. G. P. E. Howard and A. Ivanoff. 2,450,143, Sept. 28.
Chain: *See*—
Antiskid chain.
Chain forming machine. L. B. Gilbert and R. J. Kieffer. 2,450,396, Sept. 28.
Checking device for the warp threads in circular looms. C. Christiansen and G. O. K. Rüsch. 2,450,183, Sept. 28.
Chlorohydroxynitrophenyl sulfide. W. F. Hester and W. E. Craig. 2,450,342, Sept. 28.
Chuck, Grinding wheel. A. O. Bush. 2,450,230, Sept. 28.
Circuit: *See*—
Electric control circuit. Modulator circuit.
Circuit breaker. C. E. Bazley. 2,450,268, Sept. 28.
Clamp: *See*—
Cable clamp.
Clamp for attaching articles to the tops of automobiles. W. H. Hunt. 2,450,090, Sept. 28.
Clamp for placing well casings. A. Trotter. 2,450,388, Sept. 28.
Clamping device of the vise type. A. M. Sasgen. 2,450,303, Sept. 28.
Clock. A. N. Woodruff. 2,450,264, Sept. 28.
Cloth bolt display rack. E. P. Bixer. 2,450,180, Sept. 28.
Cloth finishing. G. A. Schreiner. 2,450,022, Sept. 28.
Clutch: *See*—
Automatic manually controlled clutch.
Clutch operating mechanism. W. B. Barnes. 2,450,391, Sept. 28.

Coach or bus seat. H. C. Richardson. 2,450,093, Sept. 28.
Coating composition, Heat-resistant. H. D. Cogan and N. H. Ketcham. 2,450,327, Sept. 28.
Coaxial line coupling. G. C. Devol. 2,449,983, Sept. 28.
Collector for textile drafting mechanisms. J. Noguera. 2,450,251, Sept. 28.
Compensating device. A. Wright. 2,449,969, Sept. 28.
Compensator, Variable air gap turn. H. C. Wendt. 2,450,320, Sept. 28.
Compounds containing amidine groups, Manufacture of. W. F. Short and M. W. Partridge. 2,450,386, Sept. 28.
Compressible powder dispenser. W. H. Rose. 2,450,205. Sept. 28.
Compressor lubrication, Rotary. E. L. Fabian. 2,450,190, Sept. 28
Condensation of an arylalkane in the presence of lead alkyl, The. R. B. Thompson. 2,450,099, Sept. 28.
Connection strip as used in telephone and like systems, Cross. A. J. Humphries. 2,450,001, Sept. 28.
Connector: *See*—
Electrical connector.
Consumer type container. L. C. Brooks. 2,450,110, Sept. 28.
Container: *See*—
Consumer type container.
Container and dispensing device, Beverage. C. S. Lynch. 2,450,244, Sept. 28.
Container for corrosive substances, Glass-lined. P. E. Knudsen. 2,450,146, Sept. 28.
Container for electrical condensers or other apparatus, Tubular. P. A. Sporing and C. P. Johnson. 2,450,310, Sept. 28.
Control mechanism, Clutch. E. R. Price. 2,450,161, Sept. 28.
Control system. W. M. Pickslay. 2,450,159 Sept. 28.
Control valve mechanism. W. A. Eaton. 2,450,275, Sept. 28.
Conveyer: *See*—
Match comb handling conveyer. Pivoted lug conveyer. Pneumatic grain conveyer.
Cord springs to attachment plug caps, Connecting. A. Bellis. 2,450,369, Sept. 28.
Corrosion prevention. J. E. Seebold. 2,450,095, Sept. 28.
Coupling: *See*—
Coaxial line coupling.
Coupling device particularly for electric heating appliance stands, Electrical. T. J. Hall. 2,450,336, Sept. 28.
Coupling for flareless tubes. L. N. Vandervoort. 2,450,314, Sept. 28.
Crane, Fruit picker's. H. B. Miller. 2,450,152, Sept. 28.
Crotonic acid, Manufacture of. K. H. W. Tuerck. 2,450,389, Sept. 28.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,450,010, Sept. 28.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,450,011, Sept. 28.
Cultivator, Hand propelled wheeled. O. Hoffman. 2,450,236, Sept. 28.
Cutting apparatus, Forage, including a rotor having pocketed blades. C. E. Frudden. 2,450,277, Sept. 28.
Cutting mechanism, Web. P. L. Tollison. 2,450,312, Sept. 28.
Delay action control switch. S. Williamson. 2,450,323, Sept. 28.
Detection apparatus, Electrical. N. S. Rich. 2,450,166, Sept. 28.
Detection system, Tridimensional obstacle. H. G. Busignies. 2,450,076, Sept. 28.
Device for electric resistance heating of metals and controls therefor. W. H. Scott. 2,450,362, Sept. 28.
Device for trisecting angles. G. C. Robinson. 2,450,167, Sept. 28.
Die drawing of hollow glass blanks. C. P. Byrnes. 2,450,115, Sept. 28.
Dimerization of alpha-alkyl para-alkyl styrenes. A. J. Warner and T. H. Talbot. 2,450,027, Sept. 28.
Dimethyl styrene polymerization products and their preparation. K. H. Weber and P. O. Powers. 2,450,028, Sept. 28.
Direction finder, Radio. T. H. Clark. 2,449,978, Sept. 28.
Direction finding means for aviation trainers, Radio. K. A. Kail. 2,450,240, Sept. 28.
Discharge device, Electric. H. K. Ishler. 2,450,197, Sept. 28.
Discharge device of the magnetron type, Electron. P. L. Spencer. 2,450,023, Sept. 28.
Dispenser: *See*—
Compressible powder dispenser. Soap powder dispenser.
Dispensing unit, Grease. J. D. Morgan and P. B. Levitt. 2,450,248, Sept. 28.
Disposable inserts, Diaper having. F. K. Rickerson. 2,450,059, Sept. 28.
Distance measurement device, Sensitive. W. D. Hershberger. 2,450,341, Sept. 28.
Dolly for trailers and the like. W. A. Wilson. 2,450,215, Sept. 28.
Dolly, Outboard motor. W. E. Shiflet. 2,450,304, Sept. 28.
Door locking system, Coincidental vehicle. B. J. Craig. 2,450,372, Sept. 28.
Door operator, Automatic. C. T. Schirmer and M. Knobel. 2,450,021, Sept. 28.
Drawer, Tiltable utensil. J. R. Cummings. 2,450,233, Sept. 28.
Drilling machine. H. J. Willmott. 2,450,065, Sept. 28.
Drive mechanism, Dual. M. Ware. 2,450,214, Sept. 28.
Drive mechanism, Reversing. F. H. Winslow and W. S. Hammond. 2,450,262, Sept. 28.
Dropper. C. Bernabó. 2,450,225, Sept. 28.
Dye intermediates, Producing. T. R. Thompson. 2,450,400, Sept. 28.
Dynamoelectric machine. H. S. Maxwell. 2,450,290, Sept. 28.
Electric boiler. A. A. Smith. 2,450,061, Sept. 28.
Electric control circuit. H. W. Ainsworth. 2,450,216, Sept. 28.
Electric discharge device system, Reversely-connected. A. F. Cann. 2,450,032, Sept. 28.
Electric switch. R. N. Rowe. 2,450,256, Sept. 28.
Electric temperature device. F. E. Wise. 2,450,263, Sept. 28.
Electrical connector. C. W. Dann. 2,450,271, Sept. 28.
Electrical connector. J. C. Macy. 2,450,050, Sept. 28.
Electrical connector. J. C. Macy. 2,450,202, Sept. 28.
Electrical control instrument. E. N. Jacobi. 2,450,144, Sept. 28.
Electrical device having glass-to-metal seal. R. Gordon and H. Miller. 2,450,130, Sept. 28.
Electronic goniometer for radio direction finders. J. H. Newitt. 2,450,014, Sept. 28.
Embalmer's protector. E. R. Moore. 2,450,247, Sept. 28.
Emulsion polymeriation of methyl methacrylate. B. W. Howk and F. L. Johnston. 2,450,000, Sept. 28.
Emulsions containing trinuclear iminol cyanine dyes, Photographic. A. W. Anish. 2,450,390, Sept. 28.
Engine: *See*—
Internal-combustion engine.
Engine starter gearing. V. E. Gleasman. 2,450,129, Sept. 28.
Equipment for aviators, Training. R. L. West. 2,450,261, Sept. 28.
Esters of alpha beta unsaturated carboxylic acids, Preparation of. T. L. Gresham and F. W. Shaver. 2,449,995, Sept. 28.
Esters of dimerized 9,11-linolo-diricinolein and making same, Polycarboxy. M. De Groote. 2,450,332, Sept. 28.
Esters, Polyhydric alcohol. M. De Groote and A. F. Wirtel. 2,450,124, Sept. 28.
Esters, Polyhydric alcohol. M. De Groote and A. F. Wirtel. 2,450,333, Sept. 28.
Fabric. F. Kloeckener. 2,450,047, Sept. 28.
Factice and sulfurized oils, Manufacture of. K. C. Roberts. 2,450,384, Sept. 28.
Fastening device for cover plates. C. A. de Giers. 2,450,330, Sept. 28.
Fastening means for railway tracks, Spike. R. T. Scholes. 2,450,361, Sept. 28.
Faucet, Beer. L. F. Vetrano. 2,450,315, Sept. 28.
Featheredge device, Plasterer's. A. J. Schumock. 2,450,385, Sept. 28.
Feeding machine, Oven. R. L. Brosemer. 2,450,111, Sept. 28.
Fifth wheel assembly. O. A. Logan. 2,450,201, Sept. 28.
Filament and treating the same, Carburized. C. V. Litton. 2,450,007, Sept. 28.
Filter. T. H. Slater. 2,450,208, Sept. 28.
Filter and demother. B. A. Baxter. 2,450,368, Sept. 28.
Filters, Making porous metal. F. R. Hensel. 2,450,339, Sept. 28.
Fin construction, Radiator. D. E. Morgan. 2,450,203, Sept. 28.
Fitting. G. G. Smith. 2,450,170, Sept. 28.
5-hydroxy-1,3,4-triazaindolizines as stabilizers for photographic silver-halide emulsions. N. Heimbach. 2,450,397, Sept. 28.
Flotation of bone particles. M. D. Sanders. 2,450,398, Sept. 28.
Fluid meter. C. P. Bergman. 2,449,973, Sept. 28.
Fluorescent ballast bracket. R. F. Rowe. 2,450,302, Sept. 28.
Foam breaker, High-voltage. I. I. Pinkel. 2,450,016, Sept. 28.
Folding baby seat. E. Quiggle. 2,450,301, Sept. 28.
Folding table. A. E. Puls and E. R. Swenson. 2,450,353, Sept. 28.
Food composition containing fusaria. F. F. Nord. 2,450,055, Sept. 28.
Food product and method of production. W. P. M. Greick. 2,450,335, Sept. 28.
Frequency modulation at ultra high frequencies. F. L. Burroughs. 2,450,182, Sept. 28.
Friction material, Composition of. T. R. Stenberg. 2,450,171, Sept. 28.
Froth flotation of sulfide ores, Differential. H. L. Gibbs. 2,449,984, Sept. 28.
Fruit juices, Processing. G. Singleton. 2,450,097, Sept. 28.
Fuel system for staring. E. O. Wirth and W. E. Leibing. 2,450,175, Sept. 28.

Furnace: *See*—
Open-flame heated continuous furnace.
Fuse-setting apparatus. V. P. Harvey. 2,450,375, Sept. 28.
Game apparatus. H. C. Dunfee. 2,450,125, Sept. 28.
Gas-metallurgy, Noble. G. R. Burkhardt. 2,450,081, Sept. 28.
Gas treating apparatus. L. F. Marek. 2,450,289, Sept. 28.
Gauge: *See*—
Brake shoe adjusting gauge.
Push and pull load gauge.
Water gauge.
Gauge for liquefied petroleum gas tanks, Slip tube. J. R. Hollcer. 2,450,142, Sept. 28.
Gearing, Engine starter. D. L. Miller. 2,450,246, Sept. 28.
Germ preparation, Wheat. M. P. Cryuis. 2,450,123, Sept. 28.
Glass fibers, Method and apparatus for making fine. G. Slayer and E. Fletcher. 2,450,363, Sept. 28.
Glider sled. O. J. Lidberg. 2,450,285, Sept. 28.
Gocart, Folding. H. A. Fiene. 2,450,373, Sept. 28.
Golf practice device. W. N. Promen. 2,450,162, Sept. 28.
Golf teeing apparatus. J. F. Shouse. 2,450,206, Sept. 28.
Governor. R. R. Dulong. 2,450,037, Sept. 28.
Governor. W. E. Leibing. 2,450,199, Sept. 28.
Grease compositions, Block. P. R. McCarthy. 2,450,149, Sept. 28.
Grease, Lithium base. O. P. Puryear and H. V. Ashburn. 2,450,254, Sept. 28.
Grease, Shear-resistant. H. V. Ashburn, R. S. Barnett, and O. P. Puryear. 2,450,221, Sept. 28.
Grease, Texture-stable lithium base. H. V. Ashburn and O. P. Puryear. 2,450,219, Sept. 28.
Grease, Texture-stable lithium base. H. V. Ashburn and O. P. Puryear. 2,450,220, Sept. 28.
Greases, Rust-inhibiting. E. T. White and R. C. Robinson. 2,450,321, Sept. 28.
Greases, Shear-resistant. H. V. Ashburn, R. S. Barnett, and O. P. Puryear. 2,450,222, Sept. 28.
Grip. R. I. Sanderson. 2,450,094, Sept. 28.
Gripper for square bottomed paper bag forming machines, Side. A. O. Sohn. 2,450,309, Sept. 28.
Guard, Caster. G. Voss and V. G. Ellis. 2,450,062, Sept. 28.
Guide for drill chucks. H. J. Willmott. 2,450,066, Sept. 28.
Hammer, stamp, and the like, Drop. F. Emanuel. 2,450,189, Sept. 28.
Handle: *See*—
Pot handle.
Handle for portable electric tools, Switch. J. A. Perham. 2,450,380, Sept. 28.
Handle, Pot. J. B. Galliano. 2,450,193, Sept. 28.
Hanger: *See*—
Resilient shaft hanger.
Harness, Tail set. E. B. Ogan. 2,450,379, Sept. 28.
Head for ski pole rings, Swivel. S. Werner. 2,450,063, Sept. 28.
Headlamp control, Automobile. J. Clive. 2,450,370, Sept. 28.
Heterocyclic compounds, Production of. J. G. M. Bremner and D. G. Jones. 2,450,108, Sept. 28.
Hinge construction for toilet seats. P. J. Sperzel. 2,450,209, Sept. 28.
Holder: *See*—
Tap holder.
Holder for fluid processing, Film tensioning. D. A. Albert. 2,450,178, Sept. 28.
Holding device, Corner. F. J. Kendall. 2,450,091, Sept. 28.
Hydraulic mechanism, especially plural cylinder system and control therefor. F. T. Court. 2,450,270, Sept. 28.
Hydrofluoric acid alkalation process. F. E. Frey. 2,450,038, Sept. 28.
Ignition system. D. I. Bohn. 2,450,404, Sept. 28.
Ignition systems of internal-combustion engines, Testing electrical. F. R. F. Ramsay. 2,450,164, Sept. 28.
Indicating system, Location. H. G. Busignies. 2,449,977, Sept. 28.
Indicator for electric fences, Voltage. S. A. Moore. 2,450,153, Sept. 28.
Indicator for electric ranges. R. G. Sheidler. 2,450,399, Sept. 28.
Internal-combustion engine. H. R. Ricardo. 2,450,382, Sept. 28.
Iron: *See*—
Malleable cast iron.
Ironing board having steam generating means. L. Reichold. 2,450,092, Sept. 28.
Isomerization of pinene to camphene. W. F. Carson, Jr. 2,450,119, Sept. 28.
Isomerization process. F. E. Frey. 2,450,039, Sept. 28.
Jelly rolls or the like, Making. M. Cohen. 2,450,033, Sept. 28.
Joint structure. W. J. Campbell. 2,450,232, Sept. 28.
Knitting device. H. J. D. Wolff. 2,450,067, Sept. 28.
Knitting machine. H. H. Holmes. 2,450,376, Sept. 28.
Lactones, Preparing. H. J. Hagemeyer, Jr. 2,450,133, Sept. 28.
Lapping machine, Wire-drawing die. P. Bieberich. 2,450,077, Sept. 28.
Latch device. E. N. Jacobi. 2,450,145, Sept. 28.
Lathe, Automatic step turning. H. J. Sekmann and W. A. Kimsey. 2,450,096, Sept. 28.
Leveling and contouring machine. N. C. Locke. 2,450,200, Sept. 28.
Lever, Control. G. Quayle. 2,450,354, Sept. 28.
Lifter: *See*—
Bobbin lifter.
Light: *See*—
Portable hand light.
Line tightener and fastener. P. Romano. 2,450,358, Sept. 28.
Linkage for equispacing radially guided apparatus. R. W. Jenny. 2,450,046, Sept. 28.
Lithium base, Preparing. O. P. Puryear and H. V. Ashburn. 2,450,255, Sept. 28.
Lithium hydride and hydrides of other alkali metals, Producing. P. P. Alexander. 2,450,266, Sept. 28.
Lock: *See*—
Tool handle lock.
Locking mechanism. J. H. Roethel. 2,450,357, Sept. 28.
Locking system for vehicle doors. R. Marple. 2,450,052, Sept. 28.
Logging boreholes. A. Wolf. 2,450,265, Sept. 28.
Loom harness. J. J. Kaufmann, Sr. 2,450,241, Sept. 28.
Lure, Fishing. E. H. Parnell, Sr. 2,450,253, Sept. 28.
Magnesium from magnesia-containing materials, Recovering. R. Relk. 2,450,057, Sept. 28.
Malleable cast iron. H. A. Eckman and H. W. Maack. 2,450,395, Sept. 28.
Marine sea chest sand separator. B. R. Wright. 2,450,070, Sept. 28.
Marker and station selection apparatus, Timing. E. Schoenfeld. 2,450,360, Sept. 28.
Mat frame for evaporative coolers. A. S. Feinberg. 2,450,191, Sept. 28.
Match comb handling conveyer. R. S. Pullen. 2,450,163, Sept. 28.
Material for use in the manufacture of ear defenders and the like. P. S. Veneklasen and N. A. Watson. 2,450,101, Sept. 28.
Material lifting and transporting vehicle. H. A. and G. H. Wagner. 2,450,102, Sept. 28.
Measuring machine using light beams, Area. P. E. Nokes. 2,450,054, Sept. 28.
Measuring system, Temperature. A. A. Chabrol. 2,450,269, Sept. 28.
Mechanical gripping tool. D. H. McNaughton, Sr. 2,450,151, Sept. 28.
Metal sponges, Making. A. J. Homon. 2,450,280, Sept. 28.
Meter: *See*—
Fluid meter.
Photoelectric exposure meter.
Rotary fluid meter.
Meter for enlargers using differential means to indicate contrast, Photoelectric exposure. L. L. Weisglass. 2,450,319, Sept. 28.
Method and apparatus for bonding thin sections to heavier members. P. E. Cate. 2,450,120, Sept. 28.
Method and machine for producing propellers, ships' screws, and the like. W. Risch. 2,450,383, Sept. 28.
Microwave vacuum tube. H. O. Bishop and D. Kirk, Jr. 2,449,975, Sept. 28.
Milk extractor, Top. F. H. Vallton. 2,450,313, Sept. 28.
Milling mechanism. E. T. Nord. 2,450,350, Sept. 28.
Mirror, Rear view. J. W. Anderson, Jr. 2,450,179, Sept. 28.
Mixing valve. G. R. Gemmell. 2,450,128, Sept. 28.
Modulator circuit. J. C. Hansen. 2,449,998, Sept. 28.
Monitoring system, Radio. A. Preisman. 2,450,018, Sept. 28.
Motor control system, Traction. F. H. Pritchard. 2,450,300, Sept. 28.
Mounting for rock drills. G. H. Fuehrer. 2,450,278, Sept. 28.
Muffler. J. J. Thomas. 2,450,212, Sept. 28.
Multiple stage thermionic valve. A. J. Maddock. 2,450,009, Sept. 28.
Multistage centrifugal pump. A. J. Harlamoff. 2,450,137, Sept. 28.
Nail file. A. Silverman. 2,450,207, Sept. 28.
Nickel-impregnated clay catalyst and making same. A. Voorhies, Jr., and W. E. Spicer. 2,450,317, Sept. 28.
Nitrogen tetroxide, Obtaining. G. W. Batchelder and A. W. Hawkins. 2,450,105, Sept. 28.
Nozzle having fluid valve operated simultaneously with seal in flue, Flue washing. F. W. Smith. 2,450,308, Sept. 28.
Oil substances, Fractional separation of fatty. W. P. Gee. 2,450,235, Sept. 28.
Open-flame heated continuous furnace. F. N. Hays. 2,450,087, Sept. 28.
Ophthalmologist's tool. H. A. Blohm. 2,450,229, Sept. 28.
Organic compounds plasticized with an alkoxyalkyl ether of a halonitrophenol, Plasticizable. G. L. Doelling and K. H. Adams. 2,450,272, Sept. 28.
Oscillator control, Frequency modulated. R. H. Ranger. 2,450,019, Sept. 28.
Oxide ores, Treating. J. J. Howard and H. A. Heiligman, 2,450,343, Sept. 28.
Oxygen, Production of. B. B. Fogler and L. F. Marek. 2,450,276, Sept. 28.
Palladium oxide, Preparation of. H. E. Zschiegner. 2,450,176, Sept. 28.

Paper liner for adhesive rolls, Treated. H. V. Donaldson. 2,450,083, Sept. 28.
Partition for refrigerators. M. G. Shoemaker. 2,450,305, Sept. 28.
Paste, Paint. A. C. S. Zavaleta. 2,450,072, Sept. 28.
Phenolphthalein B, B'-diglucoside, Preparation of. R. A. Hales. 2,450,086, Sept. 28.
Phonograph, Automatic. A. L. Knox. 2,450,378, Sept. 28.
Photoelectric exposure meter. G. Maisch. 2,450,288, Sept. 28.
Pin setting machine, Automatic. J. F. Murphy. 2,450,249, Sept. 28.
Pipe fitting assembly, Adjustable. W. H. Grantham. 2,450,195, Sept. 28.
Piston for rotary engines. R. P. McCulloch, J. L. Ryde, and A. Gudmundsen. 2,450,150, Sept. 28.
Pivoted lug conveyer. F. G. Bemis and R. E. Pierce. 2,450,106, Sept. 28.
Plastic composition and wallboard made therefrom. M. Skolnik. 2,450,258, Sept. 28.
Pneumatic grain conveyer. G. W. McCarty. 2,450,053, Sept. 28.
Pointer return device. C. A. de Giers and S. B. Osterlund. 2,450,331, Sept. 28.
Polycarboxylic acids, Preparation of. T. L. Gresham. 2,449,988, Sept. 28.
Polymers of unsaturated glycidyl ethers and producing same, Autocondensation. T. W. Evans and E. C. Shokal. 2,450,234, Sept. 28.
Polymers, Stabilization of terpene. J. N. Borglin. 2,449,970, Sept. 28.
Polyol ether-esters, Waxy. K. R. Brown. 2,450,079, Sept. 28.
Portable hand light. J. W. Hobbs. 2,450,141, Sept. 28.
Poultry feed, Method for producing. R. E. Wagamon. 2,450,318, Sept. 28.
Pressing means for sole attaching machines, Welt. C. K. Woodman. 2,450,069, Sept. 28.
Pressure control, Cabin. P. F. Bechberger. 2,450,076, Sept. 28.
Pressure intensifier, Pressure fluid operated. E. R. Price. 2,450,160, Sept. 28.
Primer, Engine. A. L. Parker and J. F. Melichar. 2,450,295, Sept. 28.
Process of and apparatus for producing titanium dioxide. A. Pechukas. 2,450,156, Sept. 28.
Prop, Telescopic tubular. E. C. Gillet. 2,450,374, Sept. 28.
Protector: *See*—
Embalmer's protector.
Puller, Valve. H. L. Oserowsky. 2,450,293, Sept. 28.
Pulpstone. H. W. H. Beth. 2,450,226, Sept. 28.
Pulpstone. H. W. H. Beth. 2,450,227, Sept. 28.
Pump: *See*—
Multistage centrifugal pump.
Push and pull load gauge. B. De Graaf. 2,450,188, Sept. 28.
Quenching and conveying apparatus. R. E. Buckholdt. 2,450,112, Sept. 28.
Rack: *See*—
Cloth bolt display rack.
Radio beacon. L. A. de Rosa. 2,449,982, Sept. 28.
Radio beacon, Omnidirectional. E. Labine and D. D. Grieg. 2,450,005, Sept. 28.
Receiver for pulse waves. P. F. M. Gloess. 2,449,985, Sept. 28.
Record changer, Turnover. J. D. Weaver. 2,450,402, Sept. 28.
Rectifier disks, Manufacture of. E. A. Richards, L. J. Ellison, and F. Gray. 2,450,020, Sept. 28.
Rectifiers, Manufacture of dry contact. R. B. Grace, L. J. Ellison, H. S. Leman, C. W. Leng, and A. S. Bridge. 2,449,986, Sept. 28.
Reel: *See*—
Thread advancing reel.
Reel mechanism. L. E. Simmons. 2,450,257, Sept. 28.
Refrigerated display cabinet, Open-front. E. O. Henderson. 2,450,088, Sept. 28.
Refrigerating apparatus for cold storage cabinets. M. Burney. 2,450,114, Sept. 28.
Refrigerator cooled by a forced air circuit, Walk-in. C. C. Brinkoeter. 2,450,109, Sept. 28.
Register, Cash. H. O. Randall and J. B. Geers. 2,450,165, Sept. 28.
Regulator: *See*—
Voltage regulator.
Relay structure, Electromagnetic. G. Deakin. 2,449,981, Sept. 28.
Remote control system, Synchronous preset. M. N. Yardeny. 2,450,071, Sept. 28.
Removal of photographically active ingredients from gelatin. R. E. Damschroder and M. E. Kauffman. 2,449,980, Sept. 28.
Resilient sash bearing. F. Booth, Jr. 2,450,078, Sept. 28.
Resilient shaft hanger. F. M. Guy. 2,450,279, Sept. 28.
Rest, Toe. C. K. Woodman. 2,450,068, Sept. 28.
Retractor, Adjustable. M. A. Glaser. 2,450,194, Sept. 28.
Ring with spring means for connecting the same, Barrel and breech. M. Wernli. 2,450,064, Sept. 28.
Rolling machine, Sheet metal. A. L. Groves. 2,450,041, Sept. 28.
Rotary fluid meter. C. P. Bergman. 2,449,974, Sept. 28.
Rotary impact screw driver, Hand operated. H. F. Craven. 2,450,185, Sept. 28.
Rotating bands from projectiles, Method and device for removing. 2,449,979, Sept. 28.
Sand muller, including suspendable power-driven muller unit and underlying portable bowl receptacle, Portable molding. W. F. Piper and J. J. Soldat. 2,450,299, Sept. 28.
Sanding device for vehicles. F. J. Mason. 2,450,245, Sept. 28.
Saw, Masonry. N. C. Coates. 2,450,371, Sept. 28.
Screw and nut actuator, Antifriction. G. W. Jackson. 2,450,282, Sept. 28.
Seal for tank openings. W. C. Uhri. 2,450,173, Sept. 28.
Sealing machine having seaming mechanism actuated by fluid pressure operated means responsive to vacuum, Container. A. L. Kronquest and M. M. Sedwick. 2,450,243, Sept. 28.
Seat: *See*—
Coach or bus seat.
Folding baby seat.
Seat anchoring device. R. S. Turner. 2,450,213, Sept. 28.
Securing device. H. F. Oliver. 2,450,252, Sept. 28.
Securing device. R. F. Sickles. 2,450,306, Sept. 28.
Separator: *See*—
Marine sea chest sand separator.
Servo control system, Electric motor. J. F. Emerson. 2,450,084, Sept. 28.
Servomotor, Pressure fluid follow-up. W. A. Eaton. 2,450,274, Sept. 28.
Set, Comb and brush. A. H. Jung. 2,450,344, Sept. 28.
Sewing machine. O. R. Haas. 2,450,043, Sept. 28.
Shock absorber. W. J. Osterhoudt. 2,450,154, Sept. 28.
Shock absorber, Pneumatic. P. W. Thornhill. 2,450,387, Sept. 28.
Shock absorber, Steerable wheel. N. N. O. Odegaard. 2,450,015, Sept. 28.
Shoe, Hinged heel. J. R. Napton. 2,450,250, Sept. 28.
Shopping bag and handbag, Combined. W. P. Gibson. 2,450,040, Sept. 28.
Sling, Braided. D. S. Robbins. 2,450,355, Sept. 28.
Sling and making same, Braided. D. S. Robbins. 2,450,356, Sept. 28.
Slotting and tenoning machine. A. Boucher and L. Parveau. 2,450,181, Sept. 28.
Soap greases, Preparation of barium. E. A. Bergmann, H. V. Ashburn, and G. W. Eckert. 2,450,224, Sept. 28.
Soap powder dispenser. G. H. Packwood, Jr. 2,450,155, Sept. 28.
Speed control device for motor vehicles. P. J. Burchett. 2,450,113, Sept. 28.
Spheroidal catalysts, Preparation of. H. T. Brown and R. V. Shankland. 2,450,394, Sept. 28.
Spindle stop, Lathe. G. Knox. 2,450,004, Sept. 28.
Splint, Clavicle. F. W. Peterson and O. S. Kirschner. 2,450,298, Sept. 28.
Sprouting of buds. F. E. Denny. 2,450,036, Sept. 28.
Stand for cylinder type vacuum cleaners, Accessory. P. E. Stoner. 2,450,172, Sept. 28.
Starch-resin reaction product and producing the same. C. C. Kesler, W. C. Black, W. L. Hicks, and C. N. Owen. 2,450,377, Sept. 28.
Starter, Engine. J. E. Buxton. 2,450,231, Sept. 28.
Static electricity, Elimination of. R. Beach. 2,449,972, Sept. 28.
Steering mechanism, Fluid power. D. P. Fisher. 2,450,126, Sept. 28.
Stirrup for jack sticks in looms. C. E. Kennett. 2,450,198, Sept. 28.
Stove, Gasoline field. L. J. Stein. 2,450,025, Sept. 28.
Strainer valve and operating mechanism therefor, Sink. P. F. Donahue. 2,450,392, Sept. 28.
Strainer valve and operating mechanism therefor, Sink. P. F. Donahue. 2,450,393, Sept. 28.
Strap, Battery plate-connecting. W. C. Sargent. 2,450,359, Sept. 28.
String depressor for stringed musical instruments. H. L. Sprague. 2,450,210, Sept. 28.
Structure for controlling flow of gases through absorbers, Valve. J. A. Heidbrink. 2,450,338, Sept. 28.
Sucker rod backoff wheel. F. Austin. 2,450,103, Sept. 28.
Suction cleaner with agitator drive disengaging means, Convertible. P. T. Hahn and G. R. Coss. 2,449,997, Sept. 28.
Suit, Swimming. J. O. Gantner, Jr. 2,450,085, Sept. 28.
Sulfur containing dicarboxylic acids, Preparation of. T. L. Gresham and F. W. Shaver. 2,449,996, Sept. 28.
Sulfurized jojoba oil, Making. F. B. Wells. 2,450,403, Sept. 28.
Surveying instrument, Well. R. Ring. 2,450,060, Sept. 28.
Sweatband, Hat. H. Selden. 2,450,169, Sept. 28.
Switch: *See*—
Delay action control switch.
Electric switch.
Table: *See*—
Folding table.
Take-off device, Power. J. H. Burrell and P. E. Richey. 2,450,080, Sept. 28.
Tap holder. B. H. Jordan. 2,450,238, Sept. 28.
Teat draining tube. H. A. Alcorn. 2,450,217, Sept. 28.
Telegraph system and apparatus, Facsimile. R. J. Wise. 2,450,030, Sept. 28.

Terminal, High-voltage. W. Dubilier. 2,450,273, Sept. 28.
Test prints of photographic color print material by three nonuniform part exposures of a test triangle to three colors, Device to make. A. Simmon and L. L. Weisglass. 2,450,307, Sept. 28.
Thermionic device for use with wave guides. S. Tomlin. 2,450,026, Sept. 28.
Thermometer package. V. and F. O. V. Hiergesell. 2,450,089, Sept. 28.
Thickener. F. G. Lesniak. 2,450,006, Sept. 28.
Thread advancing reel. R. W. Stanley and C. A. Castellan. 2,450,024, Sept. 28.
Timer, Range. J. R. Macintyre. 2,450,287, Sept. 28.
Timing switch for electric circuits, Pneumatic. E. C. Deane. 2,450,329, Sept. 28.
Tool: *See*—
Burr-cutting tool. Ophthalmologist's tool.
Mechanical gripping tool.
Tool handle lock. B. J. Hobbs. 2,450,044, Sept. 28.
Toolholder. H. L. Thompson and N. King. 2,450,365, Sept. 28.
Toothbrush, Pocket. T. F. Jackson. 2,450,002, Sept. 28.
Toy, Interchangeable. G. E. and J. A. Berger. 2,450,326, Sept. 28.
Transducer, Electroacoustical. L. E. Barton. 2,450,104, Sept. 28.
Transmission mechanism. C. D. Peterson and A. H. Deimel. 2,450,056, Sept. 28.
Treatment by azeotropic distillation of complex mixtures. S. J. Ralph and G. A. Dummett. 2,450,351, Sept. 28.
Treatment of flour for controlling its strength. H. H. Ward. 2,450,260, Sept. 28.
Trimmer, Sole edge. A. C. Nelson. 2,450,292, Sept. 28.
True surfaces, Preparing. S. C. Peckett. 2,450,157, Sept. 28.
Tube: *See*—
Microwave vacuum tube. Teat draining tube.
Tuning unit, Ultra high frequency. W. C. Freeman, Jr. 2,450,192, Sept. 28.
Turbine blower. B. W. Curry. 2,450,186, Sept. 28.
Undergarment. J. Schwartz. 2,450,163, Sept. 28.
Uniform cap. B. Lev. 2,450,284, Sept. 28.
Utensil, Kitchen. J. E. Krilow. 2,450,346, Sept. 28.
Utensil, Paring. J. E. Krilow. 2,450,347, Sept. 28.
Utensil, Vegetable slitting. J. E. Krilow. 2,450,348, Sept. 28.
Vacuum still, Mercury. M. A. Smith. 2,450,098, Sept. 28.
Valve: *See*—
Mixing valve.
Multiple stage thermionic valve.
Valve. W. J. Klod. 2,450,242, Sept. 28.
Vehicle: *See*—
Material lifting and transporting vehicle.
Vessel and deflector therefor, Mixing. F. D. Bostwick. 2,450,107, Sept. 28.
Voltage regulator. W. S. Master and E. Engelman. 2,450,012, Sept. 28.
Water gauge. C. M. Angel and R. A. Culbertson. 2,450,267, Sept. 28.
Wave correction means and method, Seismic. R. G. Piety. 2,450,352, Sept. 28.
Web cutting mechanism. P. L. Tollison. 2,450,312, Sept. 28.
Weighing machine, Power lift material. P. D. Hudson. 2,450,281, Sept. 28.
Well reaming apparatus. W. R. Barbour. 2,450,223, Sept. 28.
Wheel: *See*—
Sucker rod backoff wheel.
Wheel construction. W. G. Toland. 2,450,100, Sept. 28.
Winding machine. I. W. Day. 2,450,187, Sept. 28.
Window assembly, Guarded. J. L. Mayer. 2,450,349, Sept. 28.
Wrapper for frozen confections. S. B. Smith. 2,450,364, Sept. 28.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 28, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE LANE

No. 5478. Decided June 1, 1948

[168 F.2d 551; 78 USPQ 85]

1. WORDS AND PHRASES—"IMPREGNATE."
Held that the term "impregnate" does not necessarily mean saturate.
2. PATENTABILITY—METHOD OF MAKING FOOD PRODUCT.
Certain claims to a method of making an edible food product involving the impregnation of the food with clam juice *Held* obvious in view of the references of record.

APPEAL from the Patent Office. Serial No. 486,927.

AFFIRMED.

David Rines for Lane.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 1, 8, 10, 12, 14, 15, and 16 in appellant's application for a patent for an alleged invention relating to a method of making a food product. Claims 1 and 15 are sufficiently representative of the appealed claims. They read:

1. A method of making an edible product that comprises impregnating the product with a sea-food juice, and cooking the impregnated product.

15. A method of making a potato chip that comprises crushing clams to extract the juice thereof, impregnating a slice of potato with the clam juice thus obtained, and frying the impregnated slice of potato.

The references relied on are: Ida Bailey Allen's Cook Book—1935, pages 489 and 689; Everybody's Cook Book—Lord—1924, page 118; Marine Products of Commerce—Tressler, 1923, page 546.

Appellant's application discloses a process of making a food product having the flavor of clams. The process comprises crushing clams, shells and all, to extract the juice and incorporating the juice in various foods. Thus, potato slices may be dipped in the clam juice before baking, to form potato chips and cracker dough may be dipped in clam juice before baking.

The Marine Products of Commerce publication discloses that clam liquor and clam extract are articles of commerce.

The cook books cited as references disclose that it is old to add clams to potatoes prior to cooking and that it is old to add onion juice to potatoes and orange extract to a mixture for biscuit glacé.

It was the view of the Examiner, whose decision was affirmed by the Board, that, since the cook books show it to be old to add flavoring juices to potatoes and to a biscuit glacé mixture, and to use clams for flavoring potatoes, and since clam liquor and extract are commercial products, there was no invention in adding clam juice to potato chips, cracker dough, or any other desired food product. It is obvious that the selection of the particular food and the particular juice to be used involves nothing more than a matter of choice.

Counsel for appellant, in his brief, relies on the fact that appellant uses clam juice which would otherwise be wasted, but this fact is not brought out in the claims and can have no bearing on their patentability.

Certain claims state that the clam juice is obtained by crushing, but this is a common method of extracting juice from various products, and involves no invention.

[1] Counsel for appellant also relies on the large amount of clam juice incorporated in his products. No definite amount of juice is called for by the appealed claims, since the term "impregnate" does not necessarily mean "saturate." Moreover, the exact amount of juice used is merely a matter of choice.

[2] We have carefully considered the various arguments advanced by counsel for appellant, but are of opinion that the processes defined by the appealed claims would be obvious in view of the references of record.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

Vol. 614 • No. 4 Tuesday, September 28, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

NOTICES

Withdrawal or Dismissal of Appeal

In order to clarify the status of applications on appeal where there has been a withdrawal of the appeal or a failure to prosecute the same and to secure uniformity of action among the Examiners, the Examiners are instructed to observe the practice set forth herein which supersedes any prior decisions or instructions of the Commissioner inconsistent therewith.

1. *Withdrawal of appeal.* Where, after appeal has been filed and before decision by the Board of Appeals, an appellant withdraws the appeal more than six months after the date of the final rejection, the application is to be considered abandoned as of the date on which the appeal was withdrawn except as provided in paragraph numbered 2.

Note. Where a letter abandoning the application is filed in accordance with Rule 171, the effective date of abandonment is the date of filing of such letter, which is the usual practice.

2. *Same. Claims standing allowed.* If the application contains allowed claims, as well as claims appealed, the withdrawal of the appeal does not operate as an abandonment of the application, but is considered a withdrawal of the appealed claims and authority to the Examiner to cancel the same. An amendment cancelling the appealed claims is equivalent to a withdrawal of the appeal.

3. *Same. Partial withdrawal.* A withdrawal of the appeal as to some only of the claims on appeal operates to withdraw those claims from the case and the appeal continues as to the remaining claims. The withdrawn claims will be cancelled by the Examiner when necessary without further action by the applicant.

4. *Failure to prosecute appeal.* If a brief is filed within the time allowed, failure to appear at the hearing will result only in the case being considered on brief. If no brief is filed and no appearance is made at the hearing, the appeal stands dismissed and the application is considered as abandoned on the date set for the hearing regardless of whether there are allowed claims. The letter from the Board of Appeals notifying the appellant that the appeal stands dismissed is not an action in the case and does not start a new period for reply.

5. *Case before the court.* When the case is before the court either on appeal or in a civil action under R. S. 4915, the status of the application in the event of a dismissal must be determined according to the circumstances leading to the dismissal. In no event will the application be considered abandoned as of a date prior to the date of the dismissal by reason of the dismissal alone.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

September 3, 1948.

Notice of Tentative Recordation of Trade Name

[T. D. 52034]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C., Sept. 2, 1948

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"Holland Watch Company," owned by Friedman's Georgia, Inc., 805 Ellis Street, Augusta, Georgia, which is used in connection with the buying, selling, and importing of watches, watch movements and parts thereof, the imported merchandise being manufactured in Switzerland.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after September 21, 1948. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

Notice of Tentative Recordation of Trade Name

[T. D. 52043]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C., Sept. 8, 1948

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"EKCO," owned by Ekco Products Company, a corporation of Illinois, 1940 North Cicero Avenue, Chicago 39, Illinois, which is used in connection with kitchen tools and utensils, cutlery, tableware, metal household specialties, commercial baking pans, shoe trees and flashlights, manufactured in the United States. The trade name is also used on certain imported articles such as knives and forks.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after September 28, 1948. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual. Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,442,798. SPOT WELDER TIP. Patented June 8, 1948. Tip for the holder of a spot welder is easily released should it become stuck or jammed in its seat. The tip is externally threaded next to its tapered seating end, and a nut is screwed on the threaded portion. When the nut is tightened, it will abut the end of the holder and forcibly pull the tip outwardly and unseat it. (Owner) E. Crabtree, Dominion Welders & Machinery Limited, 322 Lumsden Ave., Toronto, Canada. Groups 33—59; 35—69. Reg. No. 9,959.

Pat. 2,443,797. ELECTRIC PLUG ADAPTER. Patented June 22, 1948. Plug adapter for use between an outlet and a plug compensates for wear and distortion of the female contacts of the outlet and prongs of the plug to assure good electrical contact for longer periods. Each conductor of the adapter is bent upon itself to form a pair of spaced, non-contacting resilient legs having relative movement toward and away from each other. The lower end of each conductor constitutes a prong for the adapter and the upper end female contacts. One leg of each conductor is bent to form an outwardly facing cam on each prong and an inwardly facing cam on a female contact. A lip and a spur formed on the other leg are embedded in the casing of the plug. (Owners) C. Tracy LaCost and William J. Miller, M & L Manufacturing Co., 613 Gardner Bldg., Toledo 4, Ohio. Group 36—11. Reg. No. 9,960.

Pat. 2,445,376. ELECTROMAGNETIC LOCK-OPENING SYSTEM. Patented July 20, 1948. This lock system provides a double set of switches, the proper combination of which must be operated to open lock. The system includes a battery, a solenoid from which a lock bolt protrudes in proper alignment with a keeper, and a series of interrelated primary and secondary switches connected to conductors in such a way that when specific switches of the secondary series are closed, the lock can be opened only by the operation of complemental switches in the primary series. (Owner) Thomas J. Woolmer, Jr., 2709 Fenwick Ave., Baltimore 18, Md. Groups 33—59; 36—11. Reg. No. 9,961.

Pat. 2,445,147. STOCK CENTERING CHUCK. Patented July 13, 1948. Chuck for forming lathe-centers in workpieces consists of a circular body having an axial shank socket in its inner end and a larger axial work-receiving socket in its outer end. An axial opening communicates with both sockets. A shaft spindle fitted in the shank socket carries a center drill for contacting a workpiece in the work-receiving socket. Adjustable work-centering chuck jaws, each having a threaded pin, are slidably mounted in radial grooves in the body surrounding the work-receiving socket. A manually adjustable cap on outer end of body is formed with a central work-admitting opening and a series of cam slots around the opening for engaging the pins of the jaws. Clamping nuts threaded on the pins hold cap and jaws in various adjusted positions. When the nuts are loosened, the cap may be rotated in reverse directions to open and close jaws. (Owner) Albert E. Meunier, 74 John St., Pawtucket, R. I. Group 35—43. Reg. No. 9,962.

The following patents are owned by Herbert E. Page, 2846 Westshire Drive, Hollywood 28, Calif.

Pat. 2,154,956. HYDRAULIC PRESSURE MULTIPLYING MECHANISM. Patented Apr. 18, 1939. This hydraulic unit embodies a shiftable body (containing an anchored power piston) parallel with the chamber in which a pumping piston operates. A check valve is positioned in a passage between the two chambers on the pressure side. A few strokes of the pumping piston will quickly move the shiftable body to bring an actuating member into contact with work load. Thereafter, the pumping piston pumps fluid into the work chamber, where the pressure is multiplied to cause the actuated part to apply heavy pressure to the work. Group 35—66—69. Reg. No. 9,963.

Pat. 2,284,228. PRESSURE MULTIPLYING MECHANISM. Patented May 26, 1942. Hydraulic unit embodies a fixed body formed with a pair of axially aligned pressure chambers of different diameters, with a pumping piston operating in the smaller chamber and a work piston operating in the large chamber. A check valve is placed in the smaller chamber to provide an intermediate chamber which communicates with the large chamber and with a relatively small auxiliary chamber formed in the bore of the work piston. A few strokes of the pumping piston will force fluid into the auxiliary chamber to move the work piston outwardly, causing quick movement of a work-engaging member into contact with a load. Thereafter, the pumping piston forces fluid into the large chamber behind work piston to apply heavy pressure to the work-engaging member. Groups 35—69; 38—31. Reg. No. 9,964.

Pat. 2,386,568. HYDRAULIC PRESSURE-APPLYING DEVICE. Patented Oct. 9, 1945. Hydraulic unit embodies a shiftable body formed with a plurality of parallel work pistons and cylinders of progressively increasing diameter and a pressure-generating piston and cylinder. The generating piston is independently operable to quickly move the body into contact with a work load. Thereafter, automatic means control selection and utilization of the correct work piston to meet pressure requirements of a given operation. The outer ends of the cylinders are closed by plugs so that the pistons divide the cylinders into double pressure chambers. Piston rods connected to opposite ends of the pistons project outwardly through the plugs. Levers for actuating the generating piston, and work-engaging members are disposed at opposite sides of the shiftable body. The levers are respectively connected to the outer ends of the piston rods of the pressure-generating piston. The work-engaging members are respectively connected to the outer ends of the piston rods of the work pistons. Group 35—66—69. Reg. No. 9,965.

Pat. 2,387,940. HYDRAULIC JACK. Patented Oct. 30, 1945. In this hydraulic jack, fluid pressure is built up and stored in a surge chamber where it is maintained under pressure by a spring-loaded plunger. By manually opening a valve, fluid from the surge chamber is admitted into a relatively small auxiliary pressure chamber surrounding a work piston of the jack to quickly move the lifting arm into contact with the load to be lifted. After arm contacts the work, operation of the unit will simultaneously recharge surge chamber and pump fluid into a large work chamber to build up heavy pressure to further raise the arm. Groups 35—69; 38—31. Reg. No. 9,966.

Pat. 2,388,864. HYDRAULIC LIFT TRUCK. Patented Nov. 13, 1945. Hydraulic lift truck is of minimum height so that it may be positioned under a load to be lifted where clearance is limited. A work-supporting elevator platform is pivotally mounted and supported by pairs of links pivotally connected to the axles. One pair of these links integrally formed with a sleeve rotatably mounted on one of the axles is used to raise and lower elevator platform. The hydraulic unit for rotating the sleeve embodies a shiftable body having a cylinder with a stationary work piston therein, and a work chamber behind head of piston. A plug closing one end of cylinder is formed with a cylindrical bore in which a pumping piston operates. The pumping piston is operable independently of the work piston to quickly move elevator platform into contact with work to be lifted, and thereafter operable to pump fluid into work chamber to further raise platform. Hydraulic brakes of the truck are operated by fluid pressure from work chamber so that braking pressure is governed in accordance with load. Groups 35—69; 38—22. Reg. No. 9,967.

Pat. 2,391,187. HYDRAULIC ARBOR PRESS. Patented Dec. 18, 1945. Hydraulic arbor press includes a self-contained hydraulic ram carriage mounted on a supporting frame of press for movements toward and away from an adjustable work-holding bed. The ram is rigidly secured to lower end of carriage. A small pumping piston and a large stationary work piston extend downwardly into different cylinders in body of carriage. The pumping piston is operatively connected to a capstan by means including a safety clutch. A foot pedal is connected to clutch and to cam means for opening valves to release pressure in cylinders. Capstan may be manually rotated or oscillated. To maintain fixed pressure on the ram and render capstan and pumping piston inoperable to increase the pressure, the foot pedal is depressed below a stop to disengage the safety clutch and open a valve to release pressure in a pumping cylinder. Further depression of pedal below another stop will open another valve to release pressure in work cylinder, and permit springs to return carriage to its starting position. Group 35—66—69. Reg. No. 9,968.

Pat. 2,393,405. HYDRAULIC LIFT JACK Patented Jan. 22, 1946. Hydraulic jack is formed with a pair of cylinders with a pumping piston and a work-engaging piston operating in the respective cylinders. Tops of pistons protrude out of the cylinders. The bifurcated inner end of an operating lever fulcrumed on top of the pumping piston is pivotally connected to sides of work piston. In use, the lever is raised to lift the pumping piston. Vacuum created by outward movement of this piston opens a check valve and draws fluid from a reservoir into its cylinder. The lever is then fulcrumed on the pumping piston without pumping any fluid into work cylinder to quickly move the work piston into contact with a load. Vacuum similarly draws fluid from the reservoir into work cylinder. After contact with the load, the lever is reciprocated to cause pumping piston to force fluid into work cylinder to build up sufficient pressure therein to lift the load. Several modifications are shown. Groups 35—69; 38—31. Reg. No. 9,969.

Pat. 2,398,392. HYDRAULIC TORQUE WRENCH. Patented Apr. 16, 1946. Wrench visibly indicates the amount of applied torque by hydraulic means, and acts to automatically relieve torque application when a predetermined point is reached. A solenoid may be energized, when desired, to actuate a pumping piston to force fluid into a work chamber for delivering a series of hydraulically applied impact blows to wrench head. Two adjustable pistons, one within the other, may be screwed inwardly to build up pressure in a chamber to correspond with maximum torque pressure to be applied to the wrench. Pressure in this chamber is communicated through a line to a pointer of a gauge. A second pointer of gauge moves in response to pressure in a work chamber to indicate the amount of torque being applied. Groups 33—52; 38—31. Reg. No. 9,970.

Pat. 2,400,316. VERTICAL JACK. Patented May 14, 1946. The saddle of this jack is adapted to move substantially vertically instead of about an arc. After saddle has been raised to predetermined height, jack may be operated to move the saddle forwardly and downwardly about an arc to deposit load on a car or truck. Saddle is mounted on a pair of parallel swinging arms which have their inner ends pivotally connected to a longitudinally movable carriage. The carriage is formed with a work chamber in which a work piston operates. A third arm is operatively connected to one of the swinging arms, to base of jack, and to connecting rod of the work piston in a manner to function substantially as a bell crank. Groups 35—69; 38—31. Reg. No. 9,971.

Pat. 2,402,572. HYDRAULIC JACK. Patented June 25, 1946. In this jack the work cylinder and piston are formed with a small annular auxiliary chamber around piston and a large main chamber at inner end of piston. Three aligned spring-loaded check valves of different size with floating valve-actuating members disposed between them are positioned in bore of jack. These valves respectively control the flow of fluid from a reservoir into the chamber of a pumping piston and into the auxiliary and main chambers. A few strokes of the pumping piston will pump fluid into the auxiliary chamber without opening the valve leading to main chamber to quickly raise lifting arm of jack into contact with a load, and thereafter operate to pump fluid into both chambers to cause further raising of the arm. A valve-actuating screw is provided for unseating the valves to release the pressure and lower the arm. Groups 35—69; 38—31. Reg. No. 9,972.

Pat. 2,407,796. TRIPOD JACK. Patented Sept. 17, 1946. Telescoping hydraulic tripod jack may be used to lift loads to substantial heights. The jack embodies a vertically slidable body having telescoping tripod legs (each consisting of an elongated tubular cylinder and operating piston) secured to base of jack. A work piston vertically telescoped within the body is provided with a work-engaging extension screw in its top. Fluid pressure generated by a double-acting piston may be alternately applied to the movable body and the tripod pistons to lift a load while the work piston remains telescoped. After the movable body and legs are fully extended, the work piston may be hydraulically extended to further lift load. During the lifting operation, the tripod pistons may be hydraulically locked in any position to maintain the movable body and tripod legs motionless to prevent side sway of jack. Fluid pressure may be applied to tripod pistons only to provide ease of operation when lifting heavy loads. Jack also functions to quickly move the work-engaging screw into contact with the work. Groups 35—69; 37—22; 38—31. Reg. No. 9,973.

Pat. 2,414,484. FLUID OPERATED DEVICE. Patented Jan. 21, 1947. Hydraulic unit may be placed beneath a work bench and operated by a foot pedal to actuate a vise or other device. Operation of foot pedal quickly moves vise into contact with work and thereafter applies heavy pressure. Pressure is transmitted through a flexible conduit to a remote cylinder and its load-actuating piston. The unit consists of a vertically movable body having a large cylindrical cavity in its bottom to provide a cylinder for a stationary piston and a variable capacity reservoir for hydraulic fluid. A smaller high-pressure chamber in top of the body communicates with the cavity and the chamber of a pumping plunger. Initial actuation of the plunger traps fluid, causing downward movement of the body to force a large volume of fluid from the cavity into the remote cylinder to quickly move its piston into work-engaging position. Thereafter, the plunger pumps low-volume high-pressure fluid through smaller chamber of unit into remote chamber to apply heavy pressure to the load. Group 35—66—69. Reg. No. 9,974.

Pat. 2,421,351. VEHICLE CHASSIS CONSTRUCTION. Patented May 27, 1947. This chassis utilizes a tubular member disposed longitudinally and centrally beneath the vehicle body and an oval frame secured to the rear end

of the tube. The front wheels are rotatably mounted on hinged spindles which are resiliently suspended from the ends of a cross bar rigidly secured to the tube. The axle for the rear wheels is also resiliently suspended from a cross bar of the oval frame. A hydraulic cylinder and piston constitute the resilient means. The vehicle body is mounted on three other cross bars secured to the tube. A split rubber sleeve for each bar is placed around the tube. A semi-circular slot on the under surface of each bar embraces the upper portion of the sleeve. Semi-circular clamping rings embracing the lower portion of the sleeves are clamped to the under side of the bars. Screws inserted transversely through the top of the cross bars have their lower ends threaded through the top wall of the tube to prevent the bars from turning on the tube. A motor may be mounted on the oval frame behind the rear axle. Group 38—11—41. Reg. No. 9,975.

Pat. 2,425,071. REMOTE CONTROL APPARATUS FOR HYDRAULIC SYSTEMS. Patented Aug. 5, 1947. This unit may be used to supply hydraulic pressure to apparatus, such as a ram, at a remote point. The pressure may be applied in three stages at different volume-pressure ratios to different loads encountered by the ram, the most favorable ratio being obtained when the load is greatest. The work piston of the hydraulic unit is initially automatically moved by a spring to obtain quick contact of the ram with a load. After contact, the work piston is extended by reciprocating a pumping piston to generate pressure in either one or two chambers surrounding the work piston, depending upon the load encountered by the ram. The ram may be hydraulically retracted if desired. Before the next lifting operation the pumping piston must be reciprocated to generate pressure in an intermediate chamber surrounding the work piston to compress the spring and retract the work piston to its starting position. Group 35—66—69. Reg. No. 9,976.

Pat. 2,436,936. VARIABLE-SPEED DRIVE. Patented Mar. 2, 1948. Variable speed drive is capable of a wide range of speed variation without appreciable loss of torque. The drive utilizes a planetary gear unit in combination with a main drive motor and a control motor. The rotor of the main motor is secured to a shaft having a ring gear on its outer end. The stator of the control motor is secured to a shaft (extending axially through tubular shaft) having a sun gear on its outer end. Planet gears meshing with the sun and ring gear are carried by a spider mounted on the end of a driven shaft. A circuit, including a voltage regulator, connects the rotor of the main motor with the stator of the control motor to variably operate the control motor in response to current generated in the main motor. The speed of the driven shaft is automatically varied in response to variations in operation of the motors. Group 36—19. Reg. No. 9,977.

Pat. 2,439,183. HYDRAULIC JACK. Patented Apr. 6, 1948. In this hydraulic jack, the work-lifting piston is initially automatically moved into quick work-contacting position by releasing a spring. After contact, hydraulic pressure for lifting the load is generated by a pumping piston. The spring is compressed and work piston returned to its starting position by opening a valve to permit fluid from a surge chamber to flow into an auxiliary chamber surrounding the work piston. The surge chamber is charged while the work piston is performing its lifting operation. A spring-loaded plunger maintains the fluid under pressure in the surge chamber. Groups 35—66—69; 38—31. Reg. No. 9,978.

Pat. 2,440,060. PUMP FOR HYDRAULIC JACKS. Patented Apr. 20, 1948. In this hydraulic jack the pump-operating mechanism and a pair of pumping pistons of different size are placed in a closed chamber containing a fluid reservoir so that they are not exposed, and so that any fluid which might leak from the cylinders would merely return to the reservoir. A cam shaft has a pair of oppositely disposed lobes for alternately engaging the top of one of the pumping pistons, and a single lobe parallel with one of the other lobes for engaging the top of the other pumping piston. Springs return the pistons on their suction strokes. The cam shaft may be optionally oscillated about arcs of different degrees, or rotated, to supply fluid under pressure at different volume-pressure ratios to the work cylinder of the jack. Groups 35—66—69; 38—31. Reg. No. 9,979.

Pat. 2,442,057. HYDRAULIC PRESSURE MULTIPLYING SYSTEM. Patented May 25, 1948. In this hydraulic brake system pressure application is automatically converted from a low-pressure high-volume initial stage (for rapid movement of shoes into contact with brake drums) to a high-pressure low-volume stage to thereafter accomplish application of braking pressure at a higher ratio. Multi-stage pressure-applying units may be incorporated in the master cylinder assembly and in units at the brake drums. The master cylinder and piston are of reduced diameter at their inner ends to provide a fluid chamber in front of the piston and a main pressure chamber around the piston in back of the first chamber. The reduced end of the piston is longitudinally bored to provide a chamber in which a pressure-generating piston connected to a brake pedal operates. Fluid from the generating chamber is forced into the main pressure chamber after shoes contact brake drums. Groups 35—69; 38—31. Reg. No. 9,980.

Pat. 2,442,058. REMOTE CONTROL HYDRAULIC APPARATUS. Patented May 25, 1948. In this hydraulic unit the output will vary automatically from an initial high-volume low-pressure to a low-volume high-pressure output in accordance with predetermined load conditions. The unit is formed with three cylinders of different size with a fulcrumed handle for operating the pistons. The largest piston is pivoted at a greater distance from the fulcrum shaft so that it will have a longer stroke than the other two. On initial operation all three pistons function to deliver a high volume of low-pressure fluid from the unit. Upon attainment of predetermined outlet pressure, pressure-operated valve means operatively connected to the largest cylinder opens a valve to render this cylinder inoperative. If the pressure further increases to a point where it is beyond the capacity of the two smaller cylinders, either of these may be rendered inoperative by opening a cam-actuated valve. Group 35—66—69. Reg. No. 9,981.

Des. Pat. 139,341. DESIGN FOR A HYDRAULIC JACK. Patented Nov. 7, 1944. Groups 35—69; 38—31. Reg. No. 9,982.

Des. Pat. 140,517. DESIGN FOR A HYDRAULIC JACK. Patented Mar. 6, 1945. Groups 35—69; 38—31. Reg. No. 9,983.

Des. Pat. 140,518. DESIGN FOR A HYDRAULIC JACK. Patented Mar. 6, 1945. Groups 35—69; 38—31. Reg. No. 9,984.

Des. Pat. 142,037. DESIGN FOR AN ELECTRIC TOASTER. Patented Aug. 14, 1945. Group 36—21. Reg. No. 9,985.

United States Government Owned Patent

The following patent has been assigned by the inventors, Graham W. Marks, Frank Cossey, and Ralph S. Mills, to the United States of America as represented by the Secretary of the Interior. Licenses to practice the invention will be issued on a non-exclusive and royalty-free basis. Inquiries concerning licenses should be addressed to the Solicitor, U. S. Department of the Interior, Washington 25, D. C.

Pat. 2,444,457. METAL LENS HOLDER. Patented July 6, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A holder for temporarily mounting optical elements such as a lens, filter, mirror, etc., for testing prior to permanent mounting. Consists of a pair of concentrically mounted ring-like frames. The frames are connected by linkage so that in use the outer frame may be held stationary while inner frame is rotated. Rollers are provided at free ends of links to hold lens so unobstructed view may be obtained. Group 39—13. Reg. No. 9,986.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING AUGUST, 1948

EX PARTE THE RIVERSIDE AND DAN RIVER COTTON MILLS, INCORPORATED, Serial No. 475,542.

In a decision rendered August 2, 1948 (169 Ms. Dec. 923, 78 USPQ 264), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to The Riverside and Dan River Cotton Mills, Incorporated, of Danville, Va., a mark comprising the words "FIBER-BONDED" as a trade-mark for yarns, threads and roving under the Trade-Mark Act of February 20, 1905, on the ground that the mark sought to be registered is incapable of functioning as a trade-mark and also in view of a prior registration.

It was held that each of the words "fiber" and "bonded" is descriptive and it seems clear that the combination of these descriptive words preserves their natural meaning and indicates merely that the fibers of the yarn are bonded within the ordinary meaning of each word so that the combination must therefore be merely descriptive of the goods.

It was held that since the mark must be refused registration on the ground that it is merely descriptive of the goods it is unnecessary to consider the refusal over the prior registration in detail, it being sufficient to state that with respect to this the decision of the Examiner of Trade-Marks is well founded.

E. R. SQUIBB & SONS *v.* CLENOLOR PRODUCTS COMPANY, Opposition No. 24,704.

In a decision rendered August 2, 1948 (169 Ms. Dec. 924, 78 USPQ 262), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of E. R. Squibb & Sons, of New York, N. Y., to the application of Clenolor Products Company, of New York, N. Y., to register the word "Clenolor" as a trade-mark for cream deodorant, liquid deodorant, powder deodorant, deodorant stick, under the Trade-Mark Act of 1905. The notice of opposition set up ownership and prior use of three trade-marks under the act of 1905 and ownership of the registrations thereof, namely: "QUINOLOR," No. 298,849, for germicidal preparations; "LANOLOR," No. 339,616, for lanolin, and skin preparations containing lanolin; and "PHENOLOR," No. 345,048, for antiseptics and germicides.

It was held that the Examiner of Interferences was right in finding that the only question requiring determination is whether or not the marks of the parties bear such near resemblance as to be likely to give rise in confusion in trade or deception of purchasers if applied concurrently by the respective parties, considering only the mark "LANOLOR" in determining the similarity of the marks of opposer and that of applicant, and that it is apparent on this record that the decision of the Examiner of Interferences that the marks are confusingly similar and that the goods, while specifically different, possess the same descriptive properties is clearly correct.

In response to applicant's contention that opposer's marks are descriptive and may not be relied upon to support an opposition, it was held that there is no apparent basis for the contention that opposer's marks are descriptive, and it is well settled that the validity of opposer's registration may not be attacked in this proceeding; in any event it would not be necessary that any exclusive right on the part of opposer be established provided use of there is no apparent basis for the contention that opposer's mark is established and applicant's mark is similar thereto.

CINDERELLA FOODS, INC., *v.* WILLIAMSON CANDY COMPANY AND JEWETT & SHERMAN COMPANY (ASSIGNEE, SUBSTITUTED), Cancellation No. 4756.

In a decision rendered August 2, 1948 (169 Ms. Dec. 921, 78 USPQ 263), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the petition of Cinderella Foods, Inc., of Dawson, Ga., to cancel certificates of registration of Williamson Candy Company and Jewett & Sherman Company (assignee, substituted), of Milwaukee, Wis., No. 387,472, for the notation "Peanut Crunch" (displayed on the background of a shield design) as applied to peanut butter, the word "peanut" being disclaimed, and No. 347,964 for the notation "Butta Crunch" applied to sandwich filler composed of peanut butter and whole chopped roasted peanuts, both registrations having been issued under the Trade-Mark Act of 1905. Petitioner alleged use of the descriptive word "crunchy" in connection with the sale of its own peanut butter and contended that "crunch" is merely descriptive of the goods.

It was held that the only questions presented on the appeal are whether or not "crunch" is merely descriptive of peanut butter and whether or not petitioner is entitled to maintain the cancellation.

It was held that the Examiner of Interferences was right in finding that "CRUNCH" and derivatives thereof are merely descriptive of the character of the goods here involved.

It was held that while petitioner has apparently not used the word "crunch" as such on its product and "crunchy" may have been used in referring to its product only to a limited extent, it is a manufacturer of peanut butter, and clearly entitled to maintain the cancellation.

PARFUMS CORDAY, INC., *v.* EMMETT M. KING, Opposition No. 24,892.

In a decision rendered August 3, 1948 (169 Ms. Dec. 926, 78 USPQ 265), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Parfums Corday, Inc., of New York, N. Y., to the application of Emmett M. King, of New York, N. Y., for registration under the act of February 20, 1905, of a mark consisting of the words "TOUJOURS AMBER" for rouge, lipstick, and face powder, the word "AMBER" being disclaimed. The notice of opposition alleged ownership and prior use by opposer of the trade-mark "toujours Moi" and registrations thereof under the act of February 20, 1905, by an alleged predecessor in title of opposer, No. 188,741 for perfumes and No. 206,799 for sachet, bath tablets, toilet water, talcum powder, face powder, and refills of face powder.

It was held that the proof of assignment is considered adequate, in view of the introduction of certified copies of the assignments to opposer as recorded in the Patent Office.

In response to applicant's contention that opposer has not proved renewal of its registrations, it was held that opposer's proof of renewal must be accepted as adequate, in view of the introduction of copies of these registrations showing on their face that they had been renewed, and if any doubt as to the sufficiency of the proof existed, official notice would be taken of the fact—and the records of this Office show that it is a fact—that the registrations were renewed.

It was held that it is therefore unnecessary to review in detail applicant's contention that opposer's testimony fails to prove actual sales of its product bearing this mark, but it was noted that a fair interpretation of the testimony of opposer and applicant shows sales of opposer's goods under its mark and that it is widely recognized.

It was held that little need be said as to the similarity of "toujours Moi" and "TOUJOURS AMBER," the word "AMBER" being disclaimed, since under well-settled authority they must be considered confusingly similar within the meaning of the act.

EX PARTE LINDA LYNN, Serial No. 485,786.

In a decision rendered August 5, 1948 (169 Ms. Dec. 933, 78 USPQ 267), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Linda Lynn, of Baltimore, Md., the words "Linda Lynn," under the Trade-Mark Act of March 19, 1920, as a trade-mark for a long list of ladies' wearing apparel, in view of a prior registration of the word "LYNDELENE," registration No. 249,740, for ladies' aprons and house dresses; a registration of the words "Linda Lane," registration No. 385,531, for various items of women's, misses' and children's clothing; and another cited reference which need not be considered.

It was held that there can be no question but that the goods have the same descriptive properties.

After noting that with respect to the registration "Linda Lane" applicant has presented a so-called letter of consent by the registrant, it was held that such a consent, while entitled to some consideration if there is doubt as to the likelihood of confusion between the marks or goods, does not permit registration if the marks are confusingly similar, as in this case, since both "Linda Lane" and "LYNDELENE" appear very similar to applicant's mark in sound and appearance.

THE WESTFIELD MANUFACTURING COMPANY *v.* THE PHARIS TIRE AND RUBBER COMPANY, Cancellation Nos. 4716 and 4717.

In a decision rendered August 5, 1948 (169 Ms. Dec. 929, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the petitions of The Westfield Manufacturing Company, of Westfield, Mass., to cancel two registrations of the word "COLUMBIA" under the Trade-Mark Act of 1920 owned by The Pharis Tire and Rubber Company, of Newark, Ohio, namely, registration No. 309,188 for pneumatic tires for vehicles and registration No. 388,506 for pneumatic tires and tubes for vehicle wheels. Petitioner relied upon its ownership and registration of "Columbia" as a trade-mark for mechanical bicycles.

It was held that in view of the registration No. 157,244, renewed, registered under the ten-year proviso of the Trade-Mark Act of 1905, disclosing the word "Columbia" for bicycles and parts thereof petitioner is entitled to maintain these proceedings providing the goods of the parties have the same descriptive properties.

It was held that the Examiner of Interferences was right in ruling that the goods of the parties constitute goods of the same descriptive properties.

In response to registrant's contention that the cancellation must be refused because of laches or acquiescence on the part of petitioner, after noting that registrant apparently continued to use the mark, the extent of such use not being shown in detail, but did not advertise its product, at least in periodicals, and in view of wartime conditions it is not now apparent that petitioner knew or should have known of the continued use, it was held that on this record it seems that such use during this period could not amount to laches or acquiescence.

B. W. HARRIS MANUFACTURING COMPANY *v.* WERBER SPORTSWEAR CO., Cancellation No. 4732.

In a decision rendered August 6, 1948 (169 Ms. Dec. 934, 78 USPQ 268), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences, who had sustained the petition of B. W. Harris Manufacturing Company, of St. Paul, Minn., to cancel a registration, No. 417,878, owned by Werber Sportswear Co., of Newburgh, N. Y., comprising the word "Zeroland" and pictorial or design features for men's outdoor leather and cloth-lined jackets and coats; men's outdoor sheep-lined jackets and coats; ladies' outdoor cloth jackets and coats; ladies' outdoor sheep-lined jackets and coats; men's and women's cloth and sheep-lined jackets, flying jackets and flying suits for outdoor and sportswear. Petitioner relied upon its ownership and prior use of the trade-mark "ZERO KING," accompanied by a representation of a crown, as applied to fur, sheep, leather, and textile clothing—namely, coats for men, women and children, this mark having been registered, registration No. 278,514.

It was noted that the petition for cancellation also requested cancellation of another registration, but since at the time the petition was filed that registration had expired, the petition, insofar as it requests cancellation of that registration, was dismissed by the Examiner of Interferences.

With respect to the question of similarity of the marks, after noting that the words included in each of the marks are not identical, and that the pictorial or design features included in each differ radically, it was held that considering the marks in their entireties there is not such likelihood of confusion as to indicate that petitioner has sustained the burden of showing that registrant was not entitled to the registration of its mark.

It was held that the above conclusion removes any necessity for considering registrant's motion to remand for taking testimony as to laches or acquiescence, and the motion was accordingly denied for that reason.

GOLDRING MERCHANDISING CORP. *v.* MATTHEW M. ADLER, LTD., Opposition No. 25,158.

In a decision rendered August 10, 1948 (169 Ms. Dec. 937, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition filed by Goldring Merchandising Corp., of New York, N. Y., to the application of Matthew M. Adler, Ltd., of San Francisco, Calif., to register, under the Trade-Mark Act of 1905, the notation "Towne Deb" as a trade-mark for women's, misses', juniors' and children's wearing apparel consisting of coats, suits and dresses, the word "Towne" being disclaimed. The notice of opposition alleged prior use and ownership of the trade-mark "Townley" as a trade-mark for ladies' coats, suits, dresses, ladies' golf and sport suits, coats, sweaters, and dresses, this mark being registered under the Trade-Mark Act of March 20, 1920, registration No. 296,939.

After noting that opposer has taken testimony as to its use of the mark on the goods and its priority of use is not questioned on this appeal, it was held that since the goods are the same the only question to be considered is whether or not the marks of the parties are confusingly similar within the meaning of section 5 of the Trade-Mark Act of 1905.

It was held that a comparison of the marks of the parties indicates that they bear such close resemblance that concurrent use thereof on identical goods would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers as to the source of origin thereof.

EX PARTE BEN-HUR PRODUCTS, INC., Serial No. 477,348.

In a decision rendered August 11, 1948 (169 Ms. Dec. 945, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register, under the Trade-Mark Act of 1905, to Ben-Hur Products, Inc., of New York, N. Y., the mark "Hair Glamour Bar" as a trade-mark for combs and barrettes, the words "hair" and "bar" having been disclaimed, in view of a prior registration, No. 369,921, of the words "GLAMOUR GIRL" for non-electrical hair curlers and hair wavers, hair clips, and hairpins.

It was held that the goods are considered to have the same descriptive properties and to be essentially similar.

With respect to the similarity of "Hair Glamour Bar," particularly with "hair" and "bar" disclaimed, on the one hand and "GLAMOUR GIRL" on the other, it was held that no extended comment is considered necessary, since, while descriptive or disclaimed words may not be completely ignored, the similarity of "GLAMOUR" and "GLAMOUR GIRL" seems obvious.

BRISTOL-MYERS COMPANY *v.* JOHN H. BRECK, INC., Opposition No. 24,967.

In a decision rendered August 11, 1948 (169 Ms. Dec. 941, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition of Bristol-Myers Company, of New York, N. Y., to the application of John H. Breck, Inc., of Springfield, Mass., to register, under the Trade-Mark Act of 1905, a mark consisting of the word "TRUCENE" as a trade-mark for hair dressing cream. Opposer relied upon its ownership and prior use of the trade-mark "TRUSHAY," registered, No. 406,797, as trade-mark for hand lotion and upon registration of the word "TRUSO," No. 213,754, for various toilet articles including hair tonic.

After noting that in view of a stipulation of facts, the only facts for consideration are whether or not applicant's mark is confusingly similar to the marks shown by opposer's registrations and whether or not the goods are confusingly similar, it was held that hair tonic, included as one of the products covered by the registration of opposer's trade-mark "TRUSO," and applicant's hair cream are obviously very similar; and that hand lotion, on which opposer has used its mark "TRUSHAY," is also considered to have the same descriptive properties as applicant's product and to be confusingly similar within the meaning of the act.

It was held that although careful comparison of these marks would reveal differences, when considered in their entireties, the mark of the applicant

and each of the marks of the opposer, bear such near resemblance both in appearance and sound, as to be reasonably likely to cause confusion in trade when applied concurrently to the products of the parties.

THE TREMCO MANUFACTURING COMPANY v. TAMKO ASPHALT PRODUCTS, INCORPORATED, Opposition No. 25,036.

In a decision rendered August 11, 1948 (169 Ms. Dec. 943, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition of The Tremco Manufacturing Company, of Cleveland, Ohio, to the application of Tamko Asphalt Products, Incorporated, of Joplin, Mo., to register the word "TAMKO" as a trade-mark for asphalt roofing under the act of 1905. Opposer alleged ownership and prior use of the trade-mark "TREMCO" and ownership of the registration thereof, No. 269,117, for construction materials—namely, bituminous waterproofing products in both liquid and plastic form, asphalt emulsion waterproofing products in semiliquid form, caulking, glazing, and pointing compounds, plastic cements for airproofing and insulating purposes, cork and plaster bonding compounds, concrete-floor hardeners, emulsified asphalts for floor resurfacing, pipe joint compounds and liquid and plastic roof coatings.

It was held that the marks so nearly resemble each other in sound and appearance that their concurrent use upon closely related products is quite likely to cause confusion in trade, nor does the derivation of the word change the situation, since the public cannot know of the reasons for adopting such a mark.

It was held that the goods of the parties possess the same descriptive properties, since both are materials which would be used by the same general class of purchasers for the same general purposes, and the fact that many of the applicant's initial sales are to lumber dealers in large quantities would not change this.

EAST-SIDE WINERY v. BARTOLOMEO PIO, Cancellation No. 4751.

In a decision rendered August 11, 1948 (169 Ms. Dec. 939, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the petition of East-Side Winery, of Lodi, Calif., to cancel the registration, No. 419,788, of Bartolomeo Pio, of Philadelphia, Pa., of the words "AMERICAN HOST" for wines, the word "AMERICAN" being disclaimed. Petitioner relied upon ownership of the trade-mark "ROYAL HOST" registered, No. 368,307, for wines.

It was held that considered in their entireties, the marks appear quite similar in sound, appearance and significance, so that the marks are so similar that confusion may well result from their concurrent use upon identical goods.

It was held that the existence of other marks which contain the word "host" cannot be considered in this proceeding in view of the similarity of these marks.

It was held that the fact that the labels submitted by the parties differ in general appearance is not significant, since the only question for consideration here is the similarity of the mark sought to be registered and that of opposer, because the accompanying features of the labels may be varied by the parties at any time without affecting these marks, and are not features of the marks under consideration.

THE NORWICH PHARMACAL COMPANY v. THE NATIONAL MINERAL COMPANY (BY CHANGE OF NAME, HELENE CURTIS INDUSTRIES, INC.). Opposition No. 24,189.

In a decision rendered August 13, 1948 (169 Ms. Dec. 950, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of The Norwich Pharmacal Company, of Norwich, N. Y., to the application of The National Mineral Company (by change of name, Helene Curtis Industries, Inc.), of Chicago, Ill., for registration, under the Trade-Mark Act of February 20, 1905, of a mark consisting of the word "Suave" as a trade-mark for hair dressing. Opposer relied upon its ownership and prior use, as evidenced by registration No. 252,066, of the trade-mark "SWAV" as a trade-mark for shaving cream to be used before shaving.

In response to applicant's contention that the marks of the parties are unlike in sound and meaning, it was held that mere examination indicates that these words are alike in sound and meaning, and not unlike in appearance, so that they appear to be legally indistinguishable.

It was held that hair dressing and shaving cream must be considered to be goods of the same descriptive properties.

In response to applicant's contention that since its products are sold only though beauty parlors while opposer's are sold only through drug stores and similar retail outlets, there is no likelihood of confusion, it was held that applicant's product must be considered a toilet preparation which is adapted to and might readily be sold through the same retail outlets as those of the opposer, so that the Examiner of Interferences was right in ruling that the products here involved constitute goods of the same descriptive properties, and that there is reasonable likelihood of confusion in trade.

ANTOINE CHIRIS COMPANY, INC., v. KOPPERS COMPANY, INC., Opposition No. 24,893.

In a decision rendered August 13, 1948 (169 Ms. Dec. 946, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing the notice of opposition of Antoine Chiris Company, Inc., of New York, N. Y., to the application of Koppers Company, Inc., of Pittsburgh, Pa., to register, under the act of February 20, 1905, the word "Lavendine" as a trade-mark for a scented insecticide, naphthalene combined with lavender flowers. The notice of opposition alleged that the mark sought to be registered is merely descriptive of the goods. Opposer presented certain allegations in support of its right to oppose, all of which were denied by applicant's answer.

It was held, in the absence of testimony, that the Examiner of Interferences was right in ruling that opposer had failed to establish a sufficient interest to challenge the right of registration to applicant, or to show that it would be damaged by such registration.

It was held that while "Lavendine" is apparently derived from combining portions of the words "lavender" and "naphthalene" and is therefore perhaps to a certain extent suggestive the mark does not appear to be merely descriptive of such product.

It was held that it does not seem that the existence of "lavadin" or "oil of lavendin" can in any way affect the decision of this case.

THE BORDEN COMPANY v. SWISS AMERICAN IMPORTING CO., Cancellation No. 4758.

In a decision rendered August 18, 1948 (169 Ms. Dec. 954, 78 USPQ —), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences who had sustained the petition of The Borden Company, of New York, N. Y., for cancellation of registration No. 419,062, of Swiss-American Importing Co., of Washington, D. C., the mark shown in the registration sought to be canceled consisting of the words "Dutch Garden" and the goods upon which the mark is used being certain named groceries. Petitioner relied upon its prior use and ownership of the trade-mark "Dutch Maid," as evidenced by registration No. 177,381 (renewed), disclosing a mark consisting of the words "Dutch Maid" accompanied by a picture of a girl in Dutch costume, the goods set out in petitioner's registration being of the same descriptive properties as, and in part identical with, registrant's goods.

After noting that the answer of registrant sets up a counterclaim requesting cancellation of registration No. 177,381, which counterclaim was dismissed by the Examiner of Interferences, it was held that since registrant did not press this counterclaim on this appeal, it therefore will not be considered.

It was held that while the inclusion of the common word "Dutch" necessarily gives rise to certain resemblance in sound and appearance, and similarity in either respect may be sufficient to give rise to confusion, in this case such possible similarity does not appear to be sufficient to overcome the more obvious dissimilarity in meaning or significance, so that when viewed in their entireties the differences in significance and connotation between these marks outweigh any possible similarity in sound or appearance to such an extent that there is little likelihood of confusion in trade within the meaning of section 5 of the Trade-Mark Act of 1905.

EX PARTE THE STANDARD REGISTER COMPANY, Serial No. 448,486.

In a decision rendered August 19, 1948 (169 Ms. Dec. 958, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to The Standard Register Company, of Dayton, Ohio, a mark consisting of the single letter "S" as a trade-mark for business form stationery of the type commonly known as "safety paper," under the Trade-Mark Act of 1905.

After noting that in view of a prior decision (570 O. G. 667, 63 USPQ 309) applicant filed an amendment and has sought registration of the letter "S" alone, it was held that upon the specimens presented the Examiner was right in ruling that the "S" does not function as a trade-mark and would not even if the design were not a safety feature, since the repetitious use of the mark is such that it is merely a background design and would not be recognized and could not serve to indicate origin.

In response to applicant's argument that the fact that a mark is used more than once on the goods does not prevent its functioning as a trade-mark, it was held that this general proposition is also considered sound providing it is used as a trade-mark and may function and be recognized as such, which is not the case in the specimens submitted herewith.

EX PARTE BOOTT MILLS, Serial No. 502,942.

In a decision rendered August 20, 1948 (169 Ms. Dec. 964, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register on the application of Boott Mills, of Lowell, Mass., a figure referred to by the applicant as its "grid and oval" design as a trade-mark for towels and piece-goods of linen or cotton or cotton mixed with linen fibers, under the Trade-Mark Act of 1905. The Examiner refused registration on the ground that the mark cannot function as a trade-mark and constitutes a mutilation of applicant's complete mark—the latter being based upon the fact that no wording is shown in the oval space as the mark is presented, while the specimens indicate that some wording appears within the oval.

It was held that, even conceding the existence of the so-called oval, the mark gives the impression of the two separate sets of bars, constituting a more or less casual decorative feature or embellishment rather than that of a distinctive design, so that the Examiner was right in ruling that the mark, as presented, constitutes a mere embellishment and cannot be regarded as sufficiently distinctive to function as a trade-mark.

It was held that, in view of the foregoing, it is perhaps unnecessary to consider the refusal on the ground that the mark presented constitutes a mutilation of applicant's mark, but if the design were considered sufficiently distinctive to stand upon its own merit and to be distinct from the wording appearing therein, it is doubtful whether the two would be so interrelated that they could not be considered separately; however, in the absence of such independent significance, this cannot be determined upon the present record.

After noting that on this appeal applicant has presented certain affidavits apparently from distributors of its products to the effect that they recognize the mark as signifying Boott Mills products, it was held that these cannot be considered as representative of the purchasing public and it does not follow that ordinary purchasers would recognize it or even notice this design, so that the affidavits cannot, therefore, be considered sufficient to overcome the visual effect of the drawing and specimens submitted.

It was held that whether or not these or similar affidavits might be considered under section 2(f) of the Trade-Mark Act of 1946 is not open for consideration at the present time, no action having been taken to convert this application to that act.

AUTOMATIC SIGNAL CORPORATION *v.* LEO F. LITTWIN, DOING BUSINESS AS ELECTRO-MATIC PRODUCTS CO., Opposition No. 24,912.

In a decision rendered August 27, 1948 (169 Ms. Dec. 967, 78 USPQ —), *Assistant Commissioner Murphy* reversed the action of the Examiner of Trade-Mark Interferences, who had dismissed the opposition of Automatic Signal Corporation, of East Norwalk, Conn., to the application of Leo Littwin, doing business as Electro-Matic Products Co., of Chicago, Ill., for registration under the Trade-Mark Act of February 20, 1905, of the notation "ELECTRO-MATIC" for use on electrical rectifiers for rectifying alternating current and index timers for controlling electrically the work-piece feeding movements of machine tools. The opposition was based upon opposer's ownership of the trade-mark "ELECTRO-MATIC," registration No. 249,865, for automatic electric traffic-control systems and on its use of its trade-mark "ELECTRO MATIC" on other products not covered by its registration.

In response to opposer's contention that the Examiner erred when he held that although opposer in its testimony and brief has alleged the use of its mark "ELECTRO-MATIC" on electrical relays for industrial use, electrical magnetic detectors for detection of metal objects for industrial conveyor belts, automatic garage door openers and other electrical products, its testimony was irrelevant since these goods were not pleaded in the notice of opposition, it was held that by its pleading in paragraph 2 of the notice of opposition of electric circuit controllers, electric controllers for controlling a time cycle of operations by switches or the like and other electrical devices, the notice of opposition is explicit enough to cover all the goods which opposer has proved it has manufactured and sold and to which it has applied its mark "ELECTRO-MATIC," so that the Examiner erred in his decision.

After noting that the Examiner's decision was that the products of the two parties are not related in any manner likely to cause confusion or mistake in the mind of the purchasing public as to their origin by reason of concurrent use thereon of the respective marks of the parties, and accordingly held them to possess different descriptive properties, it was held that in determining the question whether the goods of the respective parties are of the same descriptive properties, it is proper to compare applicant's electrical rectifiers with the opposer's electrical relays and to compare applicant's index timers with opposer's synchrolizer, and that the goods of the parties clearly are goods of the same descriptive properties within the meaning of section 5 of the Trade-Mark Act of 1905.

It was held that the shipment of opposer's "Synchrolizer" (Exhibit 5) in a carton and the application thereto of the shipping label (Exhibit 1) was a use of the trade-mark "ELECTRO-MATIC" on the timing device advertised in this exhibit as useful for controlling industrial processes and the like, so that the Examiner erred in his decision.

It was held that since the marks are identical and opposer has proved priority of use, and since the goods of the parties possess the same descriptive properties, the opposition should have been sustained and the applicant held not entitled to the registration sought.

EX PARTE THE BISSELL VARNISH COMPANY, Serial No. 488,253.

In a decision rendered August 31, 1948 (169 Ms. Dec. 972, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to The Bissell Varnish Company, of Bridgeport, Conn., the words "Spar Composition" as a trade-mark for varnish under the ten-year proviso of the act of February 20, 1905.

It was held that the Examiner was right in ruling that the mark sought to be registered is incapable of functioning as a trade-mark and is merely the name of the goods, being a well-known type of varnish, and therefore without trade-mark significance.

It was held that the fact that applicant is stated to have owned a previous registration of this mark which expired through inadvertence has been given serious consideration and were there any doubt as to propriety of registration it would be given much weight, but since, however, it must be a trade-mark, and used as a trade-mark, and applicant's mark does not appear to be capable of functioning as such, it must be refused in this instance.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 28, 1948

[VOL. 614. NO. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 4, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 497,948. MIDDLETOWN RUBBER CORPORATION, Middletown, Conn. Filed Mar. 9, 1946.

VINTEX

FOR POLYVINYL RESIN SHEETS FOR GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since 1943.

Ser. No. 509,417. THE B. F. GOODRICH COMPANY, Akron, Ohio. Filed Sept. 20, 1946.

Koroseal

FOR TRANSPARENT AND OPAQUE RESINOUS PLASTIC MATERIAL SOLD IN SHEET FORM FOR GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since 1936.

Ser. No. 509,470. QUEBEC FUR BREEDERS COOPERATIVE ASSOCIATION, Quebec, Canada. Filed Sept. 20, 1946. Under the act of February 20, 1905, as amended June 10, 1938.

No claim is made to the exclusive right to use the representation of fur-bearing animals and the words "Association Cooperative Des Producteurs De Fourrure" apart from the mark as shown.

The lining on the drawing is for shading only.

FOR FUR SKINS OR PELTS.

Claims use since Apr. 20, 1946.

CLASS 2

RECEPTACLES

Ser. No. 520,078. AFFILIATED RETAILERS, INC., New York, N. Y. Filed Apr. 3, 1947.

ARMAID

FOR VACUUM BOTTLES AND LUNCH BOXES.

Claims use since Nov. 15, 1946.

Ser. No. 526,324. VOGUE VANITIES LIMITED, Birmingham, England. Filed June 5, 1947.

VOGUE

FOR COSMETIC POWDER BOXES MADE FROM BASE METAL OR PLASTIC AND SOLD EMPTY IN THE TRADE.

Claims use since Sept. 28, 1930.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 519,259. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Mar. 19, 1947.

Rainbow

FOR HAND CLEANER AND HECTOGRAPH INK REMOVER.

Claims use since Dec. 27, 1937.

TAPE-EZE

The word "Tape" is disclaimed apart from the mark as shown.
FOR CHEMICAL PREPARATION TO BE ADDED TO THE WATER OF A TAPE DISPENSING MACHINE FOR CONDITIONING THE GLUE OF THE GUMMED TAPE DISPENSED THEREBY.
Claims use since Jan. 6, 1945.

Ser. No. 527,211. ARTHUR E. SMITH, Los Angeles, Calif. Filed July 5, 1947.

TRAP-DOOR

Applicant claims ownership of registration No. 388,663.
FOR LOCAL ANESTHETIZING, NERVE BLOCKING TABLETS; LOCAL ANESTHETIZING, NERVE BLOCKING POWDERS; LOCAL ANETHETIZING, NERVE BLOCKING SOLUTIONS; ANESTHETIC TABLETS, ANAESTHETIC POWDERS, AND ANESTHETIC SOLUTIONS.
Claims use since Mar. 4, 1941.

Ser. No. 527,215. ARTHUR E. SMITH, Los Angeles, Calif. Filed July 5, 1947.

Conducto

Applicant claims ownership of registrations Nos. 389,045 and 261,647.
FOR LOCAL ANESTHETIZING, NERVE BLOCKING TABLETS, LOCAL ANESTHETIZING, NERVE BLOCKING POWDERS, LOCAL ANESTHETIZING, NERVE BLOCKING SOLUTIONS, ANESTHETIC TABLETS, ANESTHETIC POWDERS, ANESTHETIC SOLUTIONS AND MEDICINAL OINTMENT USED AS A SURGICAL DRESSING AND INTRODUCED INTO TEETH SOCKETS AFTER EXTRACTIONS AND ALSO USED FOR TREATING WOUNDS AND SKIN DISEASES.
Claims use since August 1915.

Ser. No. 527,317. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

ROIDIN

Applicant claims ownership of registration No. 422,967.
FOR TABLETS FOR THE TREATMENT OF HYPOTHYROIDISM.
Claims use since January 1941.

Ser. No. 528,329. DON BAXTER, INC., Glendale, Calif. Filed July 11, 1947.

TRINIDEX

FOR SOLUTIONS CONTAINING VITAMINS OR CONSTITUENTS THEREOF AND SOLUTIONS FOR PARENTERAL THERAPY CONTAINING SYNTHESIZED CONSTITUENTS OF VITAMIN B-COMPLEX.
Claims use since Dec. 4, 1942.

Ser. No 528,565. GENERAL DYESTUFF CORPORATION, New York, N. Y. Filed July 14, 1947. Under section 2f of the act of 1946.

AZO PHLOXINE

Applicant claims ownership of registration No. 184,724.
FOR DYES AND DYESTUFFS.
Claims use since Mar. 17, 1903.

Ser. No. 528,718. JOHN J. HARRIS, doing business as No Equal Products Company Not Inc. and Nature's Mineral Health Food Shop, Chicago, Ill. Filed July 16, 1947. Under section 2f of the act of 1946.

NO EQUAL

Applicant claims ownership of registration No. 250,240.
FOR DENTIFRICES—NAMELY, TOOTH PASTE, TOOTH POWDER AND MOUTH WASHES AND ON CONCENTRATED COLLOIDAL MINERALS FOR USE AS NASAL DOUCHE.
Claims use since Dec. 2, 1927.

Ser. No. 530,213. LUCIEN LELONG, INC., Chicago, Ill. Filed Aug. 1, 1947.

SOUTHWIND

Applicant claims ownership of registration No. 271,880.
FOR FACE POWDER.
Claims use since Jan. 22, 1930.

Ser. No. 530,219. LUCIEN LELONG, INC., Chicago, Ill. Filed Aug. 1, 1947.

Applicant claims ownership of registration No. 322,879.
FOR PERFUMES, COLOGNES, TOILET WATERS, POWDERS, LIPSTICKS, ROUGES AND FOUNDATION MAKE-UP PREPARATIONS.
Claims use since May 1, 1927.

Ser. No. 530,222. LUCIEN LELONG, INC., Chicago, Ill. Filed Aug. 1, 1947.

Quick Change

Applicant claims ownership of registration No. 388,608.
FOR FOUNDATION MAKE-UP PREPARATIONS.
Claims use since Jan. 16, 1941.

Ser. No. 530,223. LUCIEN LELONG, INC., Chicago, Ill. Filed Aug. 1, 1947.

Robin Hood

Applicant claims ownership of registration No. 374,945.
FOR ROUGE AND LIPSTICK.
Claims use since Aug. 31, 1939.

Ser. No. 530,225. LUCIEN LELONG, INC., Chicago, Ill. Filed Aug. 1, 1947.

Tempest

Applicant claims ownership of registration No. 398,142.
FOR PERFUMES, COLOGNES, TOILET WATERS, POWDERS, LIPSTICKS, ROUGES, AND FOUNDATION MAKE-UP PREPARATIONS.
Claims use since Feb. 25, 1942.

Ser. No. 530,449. WALLERSTEIN COMPANY, INC., New York, N. Y. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

BURTON SALTS

FOR WATER HARDENING COMPOSITION FOR USE IN THE BREWING INDUSTRY.
Claims use since January 1905.

Ser. No. 530,613. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Aug. 6, 1947.

VITONE

FOR FACE CREAM.
Claims use since Feb. 10, 1926.

Ser. No. 530,932. JULIUS GOLDNER, doing business as Warwick Laboratories Company, Brooklyn, N. Y. Filed Aug. 9, 1947.

WARCO

Applicant claims ownership of registration No. 435,544.
FOR LIQUID RADIATOR SOLDER.
Claims use since May 1935.

Ser. No. 531,407. WARNER F. WILHELM, doing business as Prolong Company, Chicago, Ill. Filed Aug. 14, 1947.

PROLONG

FOR PREPARATION FOR TOPICAL ANAESTHETIC.
Claims use since Oct. 31, 1946.

Ser. No. 531,673. JAMIESON PHARMACAL COMPANY, Detroit, Mich. Filed Aug. 18, 1947.

MEDUMALT

FOR NUTRITIVE TONICS CONTAINING MALT SYRUP, VITAMINS AND MINERAL SUPPLEMENTS.
Claims use since July 21, 1939.

Ser. No. 531,676. JAMIESON PHARMACAL COMPANY, Detroit, Mich. Filed Aug. 18, 1947.

DI-PHOS-VIO

FOR WAFERS CONTAINING DICALCIUM PHOSPHATE AND VIOSTEROL FOR THERAPEUTIC USE WHERE CALCIUM AND PHOSPHORUS ARE INDICATED.
Claims use since Apr. 20, 1945.

Ser. No. 531,767. BOTANY MILLS, INC., Passaic, N. J. Filed Aug. 19, 1947.

BOTANY MILLS, INC. B M PASSAIC, N.J.

The words "Mills, Inc." and "Passaic, N. J.," are disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 376,810 and 405,806.
FOR LANOLIN; LANOLIN TOILET CREAM; LANOLIN LOTION; FACE POWDER; LIPSTICK; LIPSTICK REFILLS; AND TRAVEL KITS CONTAINING HAND LOTION, LANOLIN, AND LANOLIN TOILET CREAM.
Claims use since June 5, 1947.

Ser. No. 532,911. COLORADO CHEMICAL COMPANY, Denver, Colo. Filed Aug. 30, 1947.

PEDZOL

FOR MEDICATED CREAM-LIKE SUBSTANCE FOR USE IN THE TREATMENT OF CORNS AND CALLOUSES.
Claims use since Dec. 12, 1946.

Ser. No. 534,158. LUCIEN LELONG, INC., Chicago, Ill. Filed Sept. 11, 1947.

BAGUETTE

Applicant claims ownership of registrations Nos. 269,464 and 273,301.
FOR ROUGES, DUSTING POWDERS, SACHET POWDERS, FACE POWDERS, LIPSTICKS AND FILLED ROUGE AND POWDER VANITY CASES.
Claims use since July 24, 1929.

Ser. No. 534,159. LUCIEN LELONG, INC., Chicago, Ill. Filed Sept. 11, 1947.

Applicant claims ownership of registration No. 255,465.
FOR PERFUMES, COLOGNES, TOILET WATERS, TALCUM POWDERS, FACE POWDERS, SACHET POWDERS, DUSTING POWDERS, LIPSTICKS, ROUGES AND FOUNDATION MAKE-UP PREPARATIONS.
Claims use since November 1939.

Ser. No. 534,702. WINDSOR-LLOYD PRODUCTS, INC., Wilmington, Del. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

check shock

Applicant claims ownership of registration No. 334,831.
FOR HYDRAULIC SHOCK ABSORBER FLUID AND HYDRAULIC BRAKE FLUID.
Claims use since January 1933.

Ser. No. 534,777. WENCEL F. HETMAN, doing business under the name of Hetman and Co., Chicago, Ill. Filed Sept. 17, 1947.

Wash Wiser

No claim is made to "Wash" apart from the mark as shown.
FOR DIAPER WASH COMPRISING A PREPARATION HAVING DEODORIZING, DISINFECTING AND BLEACHING PROPERTIES, AND HAVING INCIDENTAL CLEANING PROPERTIES.
Claims use since Sept. 4, 1946.

Ser. No. 535,220. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Sept. 22, 1947.

SELECTONE

FOR PARASITICIDES—NAMELY, INSECTICIDES, FUNGICIDES, AND HERBICIDES AND COMPOUNDS WHICH INFLUENCE SPECIFIC PHYSIOLOGICAL PROCESSES IN PLANTS—NAMELY, PLANT HORMONES.
Claims use since Aug. 1, 1947.

Ser. No. 535,343. OD PEACOCK SULTAN COMPANY, St. Louis, Mo. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

Peacock's BROMIDES

No claim is made to the exclusive use of the word "Bromides" apart from the mark shown. Applicant claims ownership of registration No. 51,534.
FOR MEDICINAL PREPARATION USED AS A NERVE SEDATIVE.
Claims use since 1885.

Ser. No. 537,378. VAN AMERINGEN-HAEBLER, INC., New York, N. Y. Filed Oct. 9, 1947.

ALVA

FOR PERFUMES AND ESSENTIAL OILS USED IN THE MANUFACTURE OF PERFUME AND LIKE PRODUCTS.
Claims use since 1924.

Ser. No. 537,449. GLEN MEDICAL COMPANY, INC., Troy, N. Y. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

Dr. Ketchum, M. D.
PREPARATION

The portrait is that of Dr. Ketchum, deceased. The word "Preparation" is disclaimed apart from the mark.
FOR A PREPARATION FOR THE RELIEF OF NERVOUSNESS, UPSET STOMACH, EXCESS ACID; A TONIC TO CLEANSE AND STRENGTHEN THE SYSTEM.
Claims use since June 15, 1927.

Ser. No. 537,625. WALTER B. SELLMER, doing business as Selmolene Manufacturing Company, also known as Selmolene Mfg. Co., San Rafael, Calif. Filed Oct. 11, 1947.

Selmo

Applicant claims ownership of registration No. 345,849.
FOR AN OINTMENT FOR THE RELIEF OF PILES.
Claims use since Feb. 15, 1947.

Ser. No. 537,867. BONNE BELL, INC., Lakewood, Ohio. Filed Oct. 15, 1947.

Bonne

Applicant claims ownership of registrations Nos. 347,350, 391,176, and 393,081.
FOR SHAMPOO IN CREAM FORM.
Claims use since Sept. 1, 1947.

Ser. No. 539,290. THE DIVERSEY CORPORATION, Chicago, Ill. Filed Oct. 28, 1947.

Enor

Applicant claims ownership of registration No. 123,483.
FOR INSECTICIDES AND MOTH PREVENTATIVE AND EXTERMINATOR IN SOLID, GRANULAR AND LIQUID FORMS.
Claims use since April 1918 on moth preventive and exterminator; and since February 1921 on insecticides.

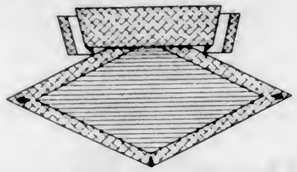
Ser. No. 540,176. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Nov. 5, 1947.

Colitho

FOR SOLUTION APPLIED TO LITHOGRAPHIC PAPER PLATES FOR PRESERVING THE SAME.
Claims use since Dec. 16, 1946.

Ser. No. 540,721. SANDOZ CHEMICAL WORKS, INC., New York, N. Y. Filed Nov. 10, 1947.

PANTHESINE



Applicant claims ownership of registration No. 283,776.
FOR A MEDICINAL PREPARATION HAVING ANESTHETIC PROPERTIES FOR THE USE IN LOCAL ANESTHESIA DURING MAJOR AND MINOR SURGERY AND FOR AN OINTMENT HAVING ANESTHETIC PROPERTIES.
Claims use since 1937.

Ser. No. 540,978. BOCON CHEMICAL CORPORATION, New York, N. Y. Filed Nov. 13, 1947.

BOCONIZE

FOR CHEMICAL COMPOUNDS USED TO MAKE FABRICS MOTH RESISTANT.
Claims use since May 5, 1947.

Ser. No. 542,285. CLOROX CHEMICAL CO., Oakland, Calif. Filed Nov. 25, 1947.

The drawing is lined for the colors orange, blue, and black. Applicant claims ownership of registrations Nos. 102,650, 279,405, and 287,293.
FOR BLEACHING, CLEANSING, ANTISEPTIC AND GERMICIDAL COMPOUND.
Claims use since May 1940.

Ser. No. 542,470. HOOD CHEMICAL CO., INC., Pittsburgh, Pa. Filed Nov. 26, 1947.

RUSTEZE

Applicant claims ownership of registration No. 271,851.
FOR CHEMICAL PREPARATION FOR REMOVING RUST STAINS FROM TEXTILE MATERIALS.
Claims use since June 1932.

Ser. No. 542,655. H. F. REMMERS, doing business as Remmer Chemical Company, Chicago, Ill. Filed Nov. 28, 1947.

RE-LAX

FOR EMBALMING FLUID.
Claims use since July 1926.

Ser. No. 543,049. FRANK AME, doing business as Ame Cosmetic Company, New Haven, Conn. Filed Dec. 3, 1947. Under section 2f of the act of 1946.

ROOTKARE

Applicant claims ownership of registration No. 404,971.
FOR HAIR LOTION, HAIR TONIC, SHAMPOO, AND WAVE LOTION.
Claims use since Feb. 25, 1941.

Ser. No. 543,250. WYETH INCORPORATED, Philadelphia, Pa. Filed Dec. 3, 1947.

PONDICILLIN

FOR ANTIBIOTIC WITH VASOCONSTRICTOR CONTAINING—NAMELY, PENICILLIN WITH EPHEDRINE.
Claims use since Oct. 24, 1947.

Ser. No. 543,839. SCHERING CORPORATION, Bloomfield, N. J. Filed Dec. 9, 1947.

THALAMYD

FOR PHTHALYLSULFACETIMIDE.
Claims use since Nov. 25, 1947.

Ser. No. 543,978. NEWPORT INDUSTRIES, INC., Pensacola, Fla. Filed Dec. 10, 1947.

NEWPORT

Applicant claims ownership of registration No. 294,579.
FOR PINE OIL.
Claims use since September 1916.

Ser. No. 544,260. FRIES BROS., INC., New York, N. Y. Filed Dec. 13, 1947. Under section 2f of the act of 1946.

GLYCO-ESTER

Applicant claims ownership of registration No. 206,539.
FOR SOLVENTS FOR FLAVORING EXTRACTS.
Claims use since May 15, 1923.

Ser. No. 544,969. BO-KAY PERFUME CO., INC., New York, N. Y. Filed Dec. 20, 1947.

Air-Float

Applicant claims ownership of registration No. 67,368.
FOR TALCUM POWDER, FACE POWDER, AND MEDICATED POWDER.
Claims use since July 1904.

Ser. No. 545,812. ELIZABETH V. W. BLAKE, Wilmington, Del. Filed Dec. 31, 1947.

OT-VAL GROVE

Applicant claims ownership of registration No. 145,044.
FOR HAIR TONIC, FACE CREAM, TALCUM POWDER, SKIN BALM, AND SCALP BALM.
Claims use since April 1919.

Ser. No. 545,982. THE C. P. HALL COMPANY, Akron, Ohio. Filed Jan. 2, 1948.

PARA-FLUX

Applicant claims ownership of registration No. 295,178.
FOR PLASTICIZER AND FLEXING MATERIAL FOR RUBBER AND SYNTHETIC RUBBERS.
Claims use since Feb. 20, 1925.

Ser. No. 546,760. CIBA PHARMACEUTICAL PRODUCTS, INC., Summit, N. J. Filed Jan. 12, 1948.

CIBALGINE

Applicant claims ownership of registration No. 190,105.
FOR A PHARMACEUTICAL PREPARATION PARTICULARLY APPLICABLE AS AN ANALGESIC AND A SEDATIVE.
Claims use since Oct. 9, 1924.

Ser. No. 547,148. POOR & COMPANY, Chicago, Ill. Filed Jan. 15, 1948.

Azed

FOR COMPOSITIONS IN THE NATURE OF ELECTROLYTES AND ADDITION AGENTS FOR USE IN THE CONTINUOUS PLATING OF METALS BY ACID ZINC AND ACID ZINC ALLOY ELECTRODEPOSITION PROCESSES.
Claims use since Jan. 5, 1948.

Ser. No. 547,376. FREDERICK M. TURNBULL, Los Angeles, Calif. Filed Jan. 17, 1948. Certificate Mark.

VASOSULFA

Applicant claims ownership of registrations Nos. 397,016 and 422,548.
FOR SULFATHIAZOLE COMPOUND.
Claims use since Mar. 31, 1942.

Ser. No. 548,347. D'ORSAY PERFUMERIES CORPORATION, New York, N. Y. Filed Jan. 30, 1948.

MILORD

FOR TOILET WATERS, PERFUMED POWDER SACHETS, FACE AND TALCUM POWDERS, LIPSTICKS, EYEBROW PENCILS, BATH SALTS, SHAMPOOS, BRILLIANTINES, PERFUME PREPARATIONS AND PERFUME EXTRACTS.
Claims use since 1932.

Ser. No. 549,746. PARADIZE PRODUCTS CORPORATION, Fairview, N. J. Filed Feb. 14, 1948.

FOR CHEMICAL MIXTURE FOR REPELLING AND KILLING MOTHS, THEIR LARVAE AND EGGS, IN THE FORM OF CRYSTALS AND NUGGETS.
Claims use since Dec. 8, 1947.

Ser. No. 549,747. PARADIZE PRODUCTS CORPORATION, Fairview, N. J. Filed Feb. 14, 1948.

PARADIZE

FOR CHEMICAL MIXTURE FOR REPELLING AND KILLING MOTHS, THEIR LARVAE AND EGGS, IN THE FORM OF CRYSTALS AND NUGGETS.
Claims use since Dec. 8, 1947.

Ser. No. 550,574. AYERST, MCKENNA & HARRISON LIMITED, Rouses Point and New York, N. Y. Filed Feb. 26, 1948.

SUPPLAVITE

Applicant claims ownership of registration No. 375,526.
FOR MULTIPLE VITAMIN PREPARATIONS.
Claims use since Feb. 5, 1948.

Ser. No. 551,463. EUGENE JERAL, Chicago, Ill. Filed Mar. 8, 1948.

Sham-Tabs

No claim is made to the exclusive use of the word "Tabs" apart from the mark.
FOR CREME SHAMPOO IN TABLET FORM.
Claims use since Mar. 5, 1948.

Ser. No. 552,300. WHITEHALL PHARMACAL COMPANY, New York, N. Y. Filed Mar. 18, 1948. Under section 2f of the act of 1946.

edna wallace HOPPER

The trade-mark consists of the name of a living person, consent given.
FOR COSMETICS—NAMELY, CLEANSING CREAMS, VANISHING CREAMS, DRY SKIN CREAMS, FOUNDATION CREAMS, COLD CREAMS AND FACIAL PACKS.
Claims use since Mar. 30, 1922.

Ser. No. 555,009. CLARENCE E. PAYNE, doing business as Dyacol Products Laboratory, San Francisco, Calif. Filed Apr. 19, 1948.

DYACOL

FOR PHOTOGRAPHIC CHEMICALS.
Claims use since Mar. 8, 1948.

Ser. No. 555,265. JESSIE H. GUM, Oakwood, Okla. Filed Apr. 22, 1948.

LUZ-NUN

FOR MEDICINE FOR FOWL.
Claims use since Jan. 1, 1948.

CLASS 7

CORDAGE

Ser. No. 544,286. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Dec. 13, 1947.

Steelply

Applicant claims ownership of registration No. 438,618.
FOR WIRE ROPE, CABLE, AND CORD.
Claims use since Apr. 8, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 506,962. RONSON ART METAL WORKS, INC., Newark, N. J. Filed Oct. 3, 1947.

REDSKIN

Applicant claims ownership of registration No. 160,372.
FOR FLINTS FOR CIGAR AND CIGARETTE LIGHTERS.
Claims use since Apr. 4, 1922.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 533,836. ATLAS POWDER COMPANY, Wilmington, Del. Filed Sept. 9, 1947.

ROCKMASTER

FOR ELECTRIC BLASTING CAPS.
Claims use since Oct. 30, 1945.

CLASS 10

FERTILIZERS

Ser. No. 527,190. RUHM PHOSPHATE & CHEMICAL COMPANY, Mt. Pleasant, Tenn. Filed July 5, 1947. Under section 2f of the act of 1946.

RUHM'S

Applicant claims ownership of registrations Nos. 263,172, 263,173, 409,781, and 411,165.
FOR FERTILIZER.
Claims use since Jan. 1, 1931.

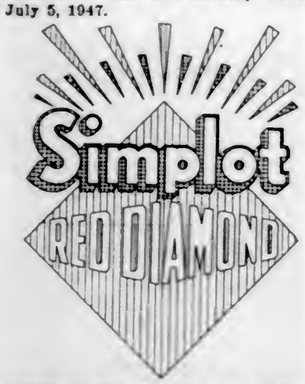
Ser. No. 527,437. JOHN R. SIMPLOT, Pocatello, Idaho. Filed July 5, 1947.

The drawing is lined for blue and black. Applicant claims ownership of registration No. 435,430.

FOR FERTILIZERS, MORE PARTICULARLY COMPLETE FERTILIZERS.

Claims use since Aug. 14, 1945.

Ser. No. 527,467. JOHN R. SIMPLOT, Pocatello, Idaho. Filed July 5, 1947.



The drawing is lined for green and black. Applicant claims ownership of registration No. 435,430.

FOR FERTILIZERS, MORE PARTICULARLY AMMONIATED PHOSPHATE.

Claims use since June 2, 1945.

Ser. No. 527,468. JOHN R. SIMPLOT, Pocatello, Idaho. Filed July 5, 1947.

The drawing is lined for red and black. Applicant claims ownership of registration No. 435,430.

FOR FERTILIZERS, MORE PARTICULARLY SUPERPHOSPHATE.

Claims use since Jan. 27, 1945.

Ser. No. 528,543. VICTOR CHEMICAL WORKS, Chicago, Ill. Filed July 12, 1947.

TAKE HOLD

The trade-mark comprises the words "Take Hold."

FOR ½ MONOPOTASSIUM PHOSPHATE AND ½ DIAMMONIUM PHOSPHATE FOR A STARTER SOLUTION FOR TRANSPLANTING VEGETABLES AND FRUITS.

Claims use since April 1940.

Ser. No. 530,591. GEO. TAIT & SONS, INC., Norfolk, Va. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

SAFE N SURE

FOR PLANT FOOD OR FERTILIZER.

Claims use since 1930.

Ser. No. 548,099. PACIFIC CHEMICAL AND FERTILIZER COMPANY, Honolulu, Hawaii. Filed Jan. 27, 1948.

Applicant disclaims all wording of the mark with the exception of the words "Pacific" and "Gaviota." Applicant claims ownership of registration No. 96,329.

FOR FERTILIZERS.

Claims use since Jan. 1, 1912, on Gaviota; and since Jan. 1, 1920, on mark as shown.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 522,976. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 9, 1947. Under section 2f of the act of 1946 as to Burroughs.

Applicant claims ownership of registrations Nos. 255,960, 333,341, and 335,607.

FOR INKING RIBBONS USED WITH BUSINESS MACHINES—NAMELY, CALCULATING MACHINES, CASH REGISTERS, TYPEWRITERS, AND THE LIKE, AND FOR CARBON PAPER.

Claims use since Mar. 19, 1947.

Ser. No. 523,149. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 9, 1947.

Applicant claims ownership of registrations Nos. 255,960 and 333,341.

FOR INKING RIBBONS USED WITH BUSINESS MACHINES—NAMELY, CALCULATING MACHINES, CASH REGISTERS, TYPEWRITERS, AND THE LIKE; AND CARBON PAPER.

Claims use since Apr. 16, 1947.

Ser. No. 540,167. GODFREY L. CABOT, INC., Boston, Mass. Filed Nov. 5, 1947.

SPHERON

FOR CARBON BLACK FOR USE IN THE MANUFACTURE OF INK.

Claims use since June 1, 1938.

CLASS 12

CONSTRUCTION MATERIALS

Ser No. 538,695. WOOD CONVERSION COMPANY, St. Paul, Minn. Filed Oct. 22, 1947.

KREX-TONE

FOR LOW-DENSITY STRUCTURAL WOOD FIBER BOARD FOR INTERIOR FINISH AND FOR THERMAL AND SOUND INSULATION.

Claims use since Sept. 2, 1947.

Ser. No. 544,589. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Dec. 17, 1947.

MEX REF CO

FOR FIREBRICK.

Claims use since Nov. 24, 1930.

Ser. No. 545,160. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill. Filed Dec. 22, 1947.

PLICAST

Applicant claims ownership of registrations Nos. 345,224 and 390,380.

FOR CASTABLE REFRACTORY MATERIAL.

Claims use since May 6, 1936.

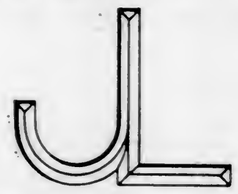
CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 509,786. NATIONAL PRESSURE COOKER COMPANY, Eau Claire, Wis. Filed July 29, 1947.

Presto

FOR PRESSURE COOKERS AND PRESSURE CANNERS.



Claims use since Feb. 12, 1940.

Ser. No. 528,481. JONES & LAUGHLIN STEEL CORPORATION, Pittsburgh, Pa. Filed July 12, 1947.

J&L

FOR METAL FENCING.
Claims use since 1941.

Ser. No. 528,487. JONES & LAUGHLIN STEEL CORPORATION, Pittsburgh, Pa. Filed July 12, 1947.

FOR FERROUS PIPE AND TUBING.
Claims use since 1930.

Ser. No. 531,479. INLAND STEEL COMPANY, Chicago, Ill. Filed Aug. 15, 1947.

RED TOP

Applicant claims ownership of registrations Nos. 125,561 and 305,033.
FOR METAL FENCE POSTS.
Claims use since May 20, 1916.

Ser. No. 532,108. J. H. BALMER CO., Trenton, N. J. Filed Aug. 22, 1947. Under section 2f of the act of 1946.

CHINAWYTE

Applicant claims ownership of registration No. 210,884.
FOR BATHROOM FIXTURES—NAMELY, TUMBLER HOLDER; COMBINATION TUMBLER AND TOOTHBRUSH HOLDER; COMBINATION CIGAR, CIGARETTE, MATCH, ASH-TRAY, AND NEWSPAPER HOLDER; COMBINATION SHELF, TUMBLER AND SOAP HOLDER; COMBINED SHELF, TUMBLER AND TOOTHBRUSH HOLDER; UNITS FOR HOLDING SAFETY RAZOR SET, SHAVING BRUSH, SHAVING POWDER, PASTE OR SOAP; SOAP HOLDERS; TOWEL RACKS, TOILET PAPER HOLDERS; HAND RAILS; ROBE HOOKS; AND TOOTHBRUSH HOLDERS.
Claims use since August 1925.

Ser. No. 533,287. THE FAIRBANKS COMPANY, New York, N. Y. Filed Sept. 4, 1947.

Applicant claims ownership of registrations Nos. 16,899, 49,354, and 77,458.
FOR STEAM VALVES AND WATER VALVES.
Claims use since Oct. 1, 1896.

Ser. No. 533,288. THE FAIRBANKS COMPANY, New York, N. Y. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

FAIRBANKS

Applicant claims ownership of registration No. 96,262.
FOR GLOBE AND ANGLE VALVES.
Claims use since Jan. 1, 1895.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 535,490. COPPER RANGE COMPANY, doing business under the name and style of C. G. Hussey & Company, Painesdale, Mich., and Pittsburgh, Pa. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

HUSSEY

Applicant claims ownership of registration No. 348,701.
FOR COPPER SHEET, COPPER IN ROLLS, COPPER WIRE, COPPER ANODES, BRASS SHEET, BRASS WIRE, ENGRAVERS' COPPER PLATES, COPPER AND BRASS RODS AND BARS.
Claims use on copper sheet, copper in rolls, copper wire, copper anodes, brass sheet, brass wire and engravers' copper plates since 1924; and on copper and brass rods and bars since 1932.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 517,669. RINSHED-MASON COMPANY, Detroit, Mich. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

MILFORD

FOR READY MIXED OIL PAINTS, PAINT ENAMELS, VARNISHES, LACQUERS, PRIMER PAINT, AND SURFACER PAINT.
Claims use since July 1, 1925.

Ser. No. 531,633. U. S. SANITARY SPECIALTIES CORPORATION, Chicago, Ill. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

Luster-bryte

Applicant claims ownership of registration No. 308,823.
FOR WAX FINISH FOR FLOORS, WOOD, RUBBER, ASPHALT, LINOLEUM, COMPOSITION, MASTIC, ETC.
Claims use since Sept. 2, 1931.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 533,949. TAMPA CIGAR COMPANY, INC., Tampa, Fla. Filed Sept. 9, 1947. Under section 2f of the act of 1946.

The portrait is fanciful.
FOR CIGARS.
Claims use since Oct. 1, 1923.

Ser. No. 541,693. PHILIP MORRIS & CO. LTD. INCORPORATED, New York, N. Y. Filed Nov. 19, 1947. Under section 2f of the act of 1946.

Wakefield

FOR SMOKING TOBACCO.
Claims use since June 20, 1929.

CLASS 19

VEHICLES

Ser. No. 542,166. PLAYBOY MOTOR CAR CORPORATION, Buffalo, N. Y. Filed Nov. 24, 1947.

PLAYBOY

FOR MOTOR CARS.
Claims use since Feb. 18, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 514,510. THE SWARTZBAUGH MANUFACTURING COMPANY, Toledo, Ohio. Filed Sept. 22, 1947. Under section 2f of the act of 1946.

SERVHOT

Applicant claims ownership of registration No. 359,224.
FOR ELECTRIC FOOD ROASTERS AND COOKERS, ELECTRIC WATER HEATERS AND ELECTRICALLY HEATED FOOD SERVICE CONVEYORS.
Claims use since January 1940.

Ser. No. 518,221. HARNISCHFEGER CORPORATION, Milwaukee, Wis. Filed Jan. 29, 1948.

P&H

FOR ELECTRIC GENERATORS; ELECTRIC WELDING GENERATORS; ELECTRIC WELDING TRANSFORMERS; ENGINE DRIVEN ELECTRIC WELDERS; ELECTRIC WELDER OUTPUT CONTROLS; ELECTRIC WELDER ELECTRODE HOLDERS; ELECTRIC ARC TORCHES; ELECTRIC PERFORMANCE INDICATING RELAYS FOR ELECTRIC WELDERS; ELECTRICAL REGULATING AND ADJUSTING APPLIANCES FOR ELECTRIC WELDING GENERATORS AND TRANSFORMERS; AND ELECTRICALLY CONTROLLED SPEED GOVERNORS FOR INTERNAL COMBUSTION ENGINES.
Claims use since Dec. 24, 1917.

Ser. No. 529,205. J. H. SCHARFF, INC., Orange, N. J. Filed July 22, 1947.

ATMO

Applicant claims ownership of registration No. 337,705.
FOR TEMPERATURE CONTROLLED ELECTRICALLY ACTUATED FIRE DETECTING AND FIRE ALARM APPARATUS.
Claims use since Dec. 14, 1920.

Ser. No. 536,411. THE MERRIAM COMPANY, INC., Columbus, Ohio, Baltimore, Md., and Washington, D. C., assignor to The Colson-Merriam Co., Baltimore, Md. Filed Oct. 1, 1947.

THE ADVANCE LINE

No claim is made to the word "Line" apart from the mark as shown.

FOR ELECTRICALLY HEATED FOOD TRAY WHEELED CONVEYORS OR TRUCKS, AND ELECTRICALLY HEATED FOOD WHEELED CONVEYORS OR TRUCKS.

Claims use since June 14, 1944.

Ser. No. 544,855. CORNELL-DUBILIER ELECTRIC CORPORATION, South Plainfield, N. J. Filed Dec. 19, 1947.

VIKANE

FOR ELECTRICAL CAPACITORS.

Claims use since Nov. 14, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 500,221. ALDRICH L. JACKSON, doing business as Federal Engineering Company, Minneapolis, Minn., assignor to The Federal Engineering Co., Inc., Minneapolis, Minn., a corporation of Minnesota. Filed Apr. 14, 1948.

STEAKMAKER

Applicant claims ownership of registration No. 310,585.

FOR MEAT TENDERIZING MACHINES.

Claims use since Jan. 3, 1941.

Ser. No. 504,360. GEORG JENSEN INC., New York, N. Y. Filed Dec. 24, 1947.

The trade-mark consists of the combination of the representation of a fanciful crown surmounting the letters or initials "GJ," in duplicate, so arranged that both letters "G" are outermost in the lower part of the combination, one pair of said initials "GJ" reading in reverse order, as shown in the drawing. Applicant claims ownership of registrations Nos. 384,539 and 384,540.

FOR BASE METAL KNIVES, FORKS, SPOONS, CORKSCREWS, AND BOTTLE OPENERS.

Claims use since October 1936.

Ser. No. 527,141. THE PACIFIC FLUSH-TANK COMPANY, Chicago, Ill. Filed July 5, 1947.

FOR SEWAGE TREATMENT EQUIPMENT—NAMELY, ROTARY DISTRIBUTORS HAVING REVOLVING SPRAY DISTRIBUTION ARMS FOR DEPOSITING SEWAGE ON A FILTER BED, SEWAGE SLUDGE DIGESTERS IN THE FORM OF TANKS HAVING COVERS AND ADAPTED TO RECEIVE AND STORE SEWAGE SLUDGE WHILE IT UNDERGOES BACTERIAL DECOMPOSITION KNOWN AS DIGESTION, AND GAS SAFETY DEVICES—NAMELY, FLAME TRAPS, DRIP TRAPS, ACCUMULATORS FOR CONDENSATE AND SEDIMENT, PRESSURE RELIEF VALVE STRUCTURES AND PILOT LINE FLAME CELLS.

Claims use since Apr. 1, 1932.

Ser. No. 527,226. NATIONAL DIE CASTING COMPANY, Chicago, Ill. Filed July 5, 1947.

Juice King

No claim is made to the word "Juice" apart from the mark as shown in the drawing. Applicant claims ownership of registrations Nos. 368,212 and 399,342.

FOR FRUIT JUICE EXTRACTORS FOR EXTRACTING JUICES FROM FRUITS, SUCH AS ORANGES, LEMONS, GRAPEFRUIT, AND THE LIKE.

Claims use since July 5, 1935.

Ser. No. 527,591. THE CREAMERY PACKAGE MFG. COMPANY, Chicago, Ill. Filed July 5, 1947.

Applicant claims ownership of registrations Nos. 181,016, 181,017, and 181,018.

FOR DAIRY PRODUCTS PROCESSING EQUIPMENT COMPRISING HOMOGENIZERS, MILK CONCENTRATORS, ICE CREAM BRICK CUTTERS, ICE CREAM PACKAGE FILLERS, AND ICE CREAM FRUIT FEEDERS.

Claims use since 1912 on homogenizers; since 1916 on milk concentrators; since 1921 on ice cream brick cutters; since 1935 on ice cream package fillers; and since 1936 on ice cream fruit feeders.

Ser. No. 528,115. STAHLY, INC., South Bend, Ind. Filed July 8, 1947.

STAHLY

Applicant claims ownership of registration No. 408,218.

FOR MECHANICAL RAZORS AND RAZOR BLADES.

Claims use since May 8, 1942.

Ser. No. 528,360. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn. Filed July 11, 1947.

UNI TILLER

No claim is made to the word "Tiller" apart from the mark. The lining in the drawing indicates the color yellow, but coloring is not claimed as an essential characteristic of the mark. Applicant claims ownership of registration No. 171,596.

FOR ADJUSTABLE WHEELED ATTACHMENTS FOR CARRYING AGRICULTURAL TOOLS AND CONNECTING THEM TO TRACTORS OR OTHER SOURCES OF DRAFT POWER.

Claims use since Dec. 1, 1922.

Ser. No. 529,638. ROBERT M. GREEN & SONS, INC., Philadelphia, Pa. Filed July 26, 1947.

FOR SODA FOUNTAINS.

Claims use since Jan. 1, 1890.

Ser. No. 530,033. THE SIRENO COMPANY, INC., New York, N. Y. Filed July 30, 1947.

SIRENO

Applicant claims ownership of registration No. 70,228.

FOR MECHANICAL SIRENS.

Claims use since August 1907.

Ser. No. 531,759. ATLAS SUPPLY COMPANY, Newark, N. J. Filed Aug. 19, 1947.

ATSCO

FOR FUEL PUMPS USED ON INTERNAL COMBUSTION ENGINES, PRINCIPALLY AUTOMOBILE ENGINES; AND BRAKE LINING EQUIPMENT IN THE NATURE OF A MACHINE WHICH DRILLS AND COUNTERSINKS BRAKE LININGS AND BRAKE DRUMS AND RIVETS THE BRAKE LININGS TO THE BRAKE DRUMS OR BRAKE BANDS, WHICH MACHINE MAY BE EITHER FOOT OPERATED OR OPERATED BY COMPRESSED AIR.

Claims use since Aug. 5, 1947, on fuel pumps; and on brake lining equipment since July 16, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 518,867. ANGELUS SALES AND SERVICE, San Francisco, Calif. Filed Nov. 24, 1947.

FOR SERVICE

Wife Savers

The words "For Service" are disclaimed apart from the mark.

FOR ELECTRICAL APPLIANCES—NAMELY, WASHING MACHINES AND AUTOMATIC ELECTRIC IRONERS.

Claims use since Aug. 6, 1946.

CLASS 25

LOCKS AND SAFES

Ser. No. 537,134. E. J. BROOKS COMPANY, Newark, N. J. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

SECURITY CAP

FOR BASE METAL SEALS FOR BAGS OF FLEXIBLE MATERIAL.

Claims use since June 13, 1938.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 502,358. VISI-TROL CORPORATION, Detroit, Mich. Filed Sept. 17, 1947.

VISI-TROL

FOR RENEWABLE WALL CHARTS AND GRAPHS COMPRISING A PLURALITY OF PARALLEL CHANNEL STRIPS CARRIED BY A PLANE BACKING AND ADAPTED TO HOLD REPLACEABLE INDICATOR TABS WHICH ARE SLIDABLE ALONG THE CHANNEL STRIPS FOR MAINTAINING PRODUCTION AND CONTROL RECORDS.
Claims use since Jan. 14, 1946.

Ser. No. 517,082. NEWPORT OPTICAL MANUFACTURING CO., INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

CAVALIER

FOR SPECTACLE FRAMES.
Claims use since June 1, 1940.

Ser. No. 517,501. MARINE OPTICAL MFG. CO., Roslindale, Boston, Mass. Filed Oct. 18, 1947.

ADONIS

FOR OPTICAL FRAMES.
Claims use since Jan. 23, 1947.

Ser. No. 519,961. HENRY T. KUCERA, doing business as Automatic Devices Co., Chicago, Ill. Filed Oct. 18, 1947.

W C

FOR THERMOSTATIC TEMPERATURE CONTROLS FOR HEAT TRANSFER SYSTEMS.
Claims use since April 1946.

Ser. No. 531,682. RAYMOND A. KENNEDY, Sioux City, Iowa. Filed Aug. 18, 1947.

AERODINAMIC

The representation of the wheels and the propellor are disclaimed apart from the mark as shown.
FOR MACHINES USED FOR DETERMINING AND CORRECTING THE STATIC OR DYNAMIC BALANCE, OR BOTH, OF AUTOMOBILE WHEELS AND OTHER MACHINE ELEMENTS TO BE OPERATED AT HIGH ROTATIVE SPEEDS.
Claims use since Dec. 1, 1945.

Ser. No. 531,757. ATLAS SUPPLY COMPANY, Newark, N. J. Filed Aug. 19, 1947.

ATLAS

Applicant claims ownership of registration No. 332,120.
FOR MOTOR ANALYZERS CONSISTING OF MULTIPLE TEST CIRCUITS FOR TESTING THE IGNITION, CARBURETION, AND TIMING OF INTERNAL COMBUSTION ENGINES.
Claims use since Feb. 8, 1946.

Ser. No. 532,073. THE WALMAN OPTICAL COMPANY, doing business as The Walman Optical Co., Minneapolis, Minn. Filed Aug. 21, 1947.

WALCO

FOR OPTICAL FRAMES AND MOUNTINGS, OPTICAL LENSES, AND BLANKS FOR OPTICAL LENSES.
Claims use since May 15, 1915.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 544,993. GENERAL CHAIN COMPANY, INC., North Attleboro, Mass. Filed Dec. 20, 1947.

Applicant claims ownership of registration No. 196,421.
FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT—NAMELY, BRACELETS, PENDANTS, BROOCHES, AND EARRINGS, MADE OF OR PLATED WITH PRECIOUS METALS.
Claims use on pendants since August 1939; on brooches since December 1939; and on earrings since March 1941.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 528,732. MCCRAY REFRIGERATOR COMPANY, Kendallville, Ind. Filed July 16, 1947. Under section 2f of the act of 1946.

McCray

Applicant claims ownership of registrations Nos. 52,105 and 352,723.
FOR MECHANICALLY OPERATED DOMESTIC AND COMMERCIAL REFRIGERATORS COMPRISING WALK-IN COOLERS, REACH-IN CABINETS AND CLOSED AND OPEN TYPE DISPLAY CASES, AND MECHANICALLY OPERATED LIQUID COOLERS.
Claims use since January 1890.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 520,841. THE VINCENT-MCCALL COMPANY, Kenosha, Wis. Filed Oct. 30, 1947.

THE PENTHOUSE
a Homeworthy Product

No claim is made to the exclusive use of the word "Product."
FOR MATTRESSES.
Claims use since May 3, 1946.

Ser. No. 531,956. STAR MANUFACTURING COMPANY OF TEXAS, Amarillo, Tex. Filed Aug. 20, 1947.

Starbilt

FOR STEEL BINS IN THE FORM OF RACKS OR SHELVING AND BIN ENDS FOR STORAGE AND DISPLAY PURPOSES.
Claims use since June 1, 1947.

Ser. No. 538,315. RE-LY-ON PRODUCTS COMPANY, Pittsburgh, Pa. Filed Oct. 18, 1947.

RE-LY-ON

FOR BED SPRINGS AND MATTRESSES.
Claims use since February 1917.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 518,722. HARPER-WYMAN COMPANY, Chicago, Ill. Filed July 5, 1947.

ONICA

FOR GAS BURNERS AND PARTS THEREOF FOR GAS STOVES AND GAS RANGES.
Claims use since July 1937.

Ser. No. 518,724. HARPER-WYMAN COMPANY, Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

WYMAN

FOR GAS ORIFICES USED TO LIMIT THE FLOW OF GAS TO PILOT BURNERS, AND GAS VALVE HOODS.
Claims use since January 1940.

Ser. No. 518,950. HARPER-WYMAN COMPANY, Chicago, Ill. Filed July 5, 1947.

ALLTROL

FOR GAS BURNERS AND PARTS THEREOF FOR GAS STOVES AND GAS RANGES.
Claims use since January 1941.

Ser. No. 518,951. HARPER-WYMAN COMPANY, Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

HARPER

FOR GAS BURNERS AND PARTS THEREOF FOR GAS STOVES AND GAS RANGES.
Claims use since May 1934.

Ser. No. 532,178. UNIVERSAL COFFEE COMPANY, Chicago, Ill. Filed Aug. 22, 1947.

KOFYMATIC

Applicant claims ownership of registration No. 324,987.
FOR COFFEE BREWING URNS AND STOVES SPECIALLY ADAPTED FOR THE HEATING OR BREWING OF COFFEE.
Claims use since June 1, 1934.

Ser. No. 534,110. GRAY & DUDLEY COMPANY, Nashville, Tenn. Filed Sept. 11, 1947.

Volco

Applicant claims ownership of registration No. 342,118.
FOR COOKING AND HEATING STOVES AND FURNACES.
Claims use since June 29, 1936.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 537,242. J. E. RHOADS & SONS, Philadelphia, Pa. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

POWERHOLD

Applicant claims ownership of registrations Nos. 243,263 and 252,430.
FOR FLAT LEATHER BELTING.
Claims use since Mar. 31, 1927.

Ser. No. 543,989. RICHMOND RUBBER CO., INC., Richmond, Va. Filed Dec. 10, 1947. Under section 2f of the act of 1946.

RICHMOND

Applicant claims ownership of registration No. 406,507.
FOR PNEUMATIC TIRES AND INNER TUBES.
Claims use since 1937.

Ser. No. 546,063. THE SHALER COMPANY, Waupun, Wis. Filed Jan. 2, 1948.

5 MINUTE

FOR PORTABLE RUBBER-TIRE VULANIZERS.
Claims use since Jan. 2, 1917.

CLASS 37

PAPER AND STATIONERY

Ser. No. 499,456. OSBORN PAPER COMPANY, Marion, Ind. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

PADCRAFT

Applicant claims ownership of registration No. 250,504.
FOR SCRATCH PADS, MEMO PADS, LEGAL AND OFFICE PADS, ALL PURPOSE PADS, LOOSE LEAF FILLERS, MANIFOLD ORDER BOOKS, REAM PAPERS, AND STENOGRAPHERS' NOTE BOOKS.
Claims use since Aug. 6, 1940.

Ser. No. 530,001. HOWARD PAPER MILLS, INC., Dayton, Ohio. Filed July 30, 1947. Under section 2f of the act of 1946.

HOWARD

Applicant claims ownership of registration No. 336,980.
FOR BOND PAPER, LAID BOND PAPER, LEDGER PAPER, MIMEOGRAPH PAPER, POSTING LEDGER PAPER, WRITING PAPER, ENVELOPE PAPER, AND PAPER ENVELOPES.
Claims use on bond paper since 1911; on laid bond paper since 1928; on ledger paper since 1915; on mimeograph paper since 1928; on posting ledger paper since 1932; on writing paper since 1928; on envelope paper since 1936; and on envelopes since June 1936.

Ser. No. 530,958. THE REYNOLDS MANUFACTURING COMPANY, Holyoke, Mass. Filed Aug. 9, 1947.

RENCO QUALITY

The word "Quality" is disclaimed apart from the mark shown.
FOR WRITING, BOND, LEDGER, MANIFOLD, AND MIMEOGRAPH PAPERS, AND SCHOOL AND BUSINESS TABLETS.
Claims use since 1924.

Ser. No. 533,292. FULTON SPECIALTY CO., Elizabeth, N. J. Filed Sept. 4, 1947.

FOR DATER STAMPS.
Claims use since September 1896.

Ser. No. 533,306. NORMAN HARROWER, doing business as Linton Brothers & Company, Fitchburg, Mass. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

WHITAG

Applicant claims ownership of registration No. 355,682.
FOR CARDBOARD FOR THE MANUFACTURE OF SHIPPING TAGS AND FOLDERS.
Claims use since Feb. 1, 1937.

Ser. No. 533,308. NORMAN HARROWER, doing business as Linton Brothers & Company, Fitchburg, Mass. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

Linton's

Applicant claims ownership of registrations Nos. 292,807, 328,055, and 328,056.
FOR BRISTOL BOARD, CARDBOARD, TAG BOARD, COVER STOCK, AND PAPER USED AS COMPANION SHEETS TO BRISTOL BOARD.
Claims use since July 14, 1931.

Ser. No. 533,558. EVERSHARP, INC., Chicago, Ill. Filed Sept. 5, 1947.

EVERSHARP

Applicant claims ownership of registrations Nos. 147,712, 297,913, 300,965, 318,249, and 159,571.
FOR FOUNTAIN PENS AND MECHANICAL PENCILS.
Claims use since December 1913.

Ser. No. 536,011. SWIGART PAPER COMPANY, Chicago, Ill. Filed Sept. 27, 1947.

Miracle

FOR SHEET PAPER—NAMELY, BOND PAPERS, MIMEOGRAPH PAPERS, AND LEDGER PAPERS.
Claims use since 1934.

Ser. No. 536,633. PAPER CORPORATION OF AMERICA, New York, N. Y. Filed Oct. 3, 1947.

MICROSIZED

FOR PAPER STOCK.
Claims use since Aug. 12, 1947.

Ser. No. 536,634. PAPER CORPORATION OF AMERICA, New York, N. Y. Filed Oct. 3, 1947.

LPF

FOR PAPER STOCK.
Claims use since Aug. 19, 1947.

Ser. No. 537,434. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

RAPID WRITER

Applicant claims ownership of registration No. 178,578.
FOR LEAD PENCILS.
Claims use since Mar. 13, 1922.

Ser. No. 537,435. JOSEPH DIXON CRUCIBLE COMPANY, Jersey City, N. J. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

BEGINNERS

Applicant claims ownership of registration No. 268,443.
FOR LEAD PENCILS.
Claims use since 1907.

The drawing is lined for shading only.
FOR PATCHING PLASTER FOR WALLS.
Claims use since about 1905.

Reg. No. 160,651. Registered Oct. 24, 1922. RUTLAND FIRE CLAY CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

The drawing is lined for shading.
FOR ASBESTOS FURNACE CEMENT; IRON CEMENT, WHICH IS A STIFF PASTE FOR SEALING THE JOINTS IN SOIL PIPES AND FILLING CRACKS OR BREAKS IN METAL CASINGS; GAS-RETORT CEMENT, WHICH IS A PLASTIC MATERIAL USED FOR PATCHING GAS RETORTS AND FIRE BOXES; LIQUID ROOF CEMENT, NOW CALLED "ROOF COATING"; PLASTIC ROOFING CEMENT, PASTE, PIPE-JOINT CEMENT, AND PLASTIC STOVE LINING.
Claims use since sometime in 1905.

Reg. No. 163,759. Registered Jan. 23, 1923. RUTLAND FIRE CLAY CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

RUTLAND

FOR ASBESTOS FURNACE CEMENT, IRON CEMENT WHICH IS OF STIFF PASTE FOR SEALING THE JOINTS IN SOIL PIPES AND FILLING CRACKS OR BREAKS IN METAL CASTINGS, GAS-RETORT CEMENT WHICH IS A PLASTIC MATERIAL USED FOR PATCHING GAS RETROTS AND FIRE BOXES.
Claims use since sometime in 1901.

Reg. No. 206,443. Registered Dec. 1, 1925. WESTERN BRICK COMPANY, Danville, Ill., a corporation of Illinois. Republished by registrant.

FOR BRICK AND TILE.
Claims use since June 5, 1925.

Reg. No. 258,930. Registered July 16, 1929. WESTERN WAXED PAPER COMPANY OF OREGON, Portland, Oreg. Republished by Crown Zellerbach Corporation, doing business as Western Waxed Paper Company, San Francisco, Calif., a corporation of Nevada.

DEFIANCE

FOR BUILDING PAPER.
Claims use since Nov. 16, 1928.

Reg. No. 260,581. Registered Aug. 27, 1929. STANDARD PORTLAND CEMENT COMPANY, Cleveland, Ohio. Republished by Diamond Alkali Company, Pittsburgh, Pa., a corporation of Delaware.

STANDARD PORTLAND CEMENT

The words "Standard Portland Cement" are disclaimed apart from the mark as shown.
FOR PORTLAND CEMENT.
Claims use since June 24, 1925.

Reg. No. 324,155. Registered May 14, 1935. RUTLAND FIRE CLAY CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

The words "Patching Plaster" are disclaimed apart from the mark as shown.
FOR PATCHING PLASTER FOR WALLS.
Claims use since Jan. 1, 1928.

Reg. No. 324,156. Registered May 14, 1935. RUTLAND FIRE CLAY CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

The words "Patching Plaster" are disclaimed apart from the mark as shown.
FOR PATCHING PLASTER FOR WALLS.
Claims use since Jan. 1, 1928.

Reg. No. 422,066. Registered July 2, 1946. CHICAGO MILL AND LUMBER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CRAVENEER

FOR WOOD AND PAPER VENEER BOARD.
Claims use since Sept. 9, 1915.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 268,715. Registered Mar. 18, 1930. AUTOMATIC DRIP-O-LATOR COMPANY, Kansas City, Mo., assignor to The Enterprise Aluminum Company. Republished by The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio.

DRIP-O-LATOR

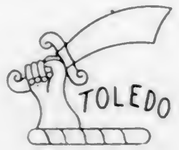
FOR APPARATUS FOR PREPARING INFUSIONS SUCH AS THOSE OF COFFEE AND TEA.
Claims use since December 1926.

Reg. No. 295,523. Registered July 5, 1932. BARNES & JONES INCORPORATED, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location Jamaica Plain, Boston, Mass.

B&J

FOR PLUMBING AND STEAM FITTING VALVES AND TRAPS.
Claims use since July 1924.

Reg. No. 419,976. Registered Mar. 19, 1946. NATIONAL LOCK CO., Rockford, Ill., a corporation of Delaware. Republished by registrant.



FOR ANGLE IRONS, BED RAIL CLIPS, BED RAIL FASTENERS, AND ALL THE OTHER ITEMS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since September 1942.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 65,490. Registered Oct. 8, 1907. JNO. HY. ANDREW & CO. LD., Sheffield, England. Republished by Andrews Toledo Ltd., Sheffield, England, a company incorporated under the laws of the United Kingdom of Great Britain.

FOR STEEL IN BAR, ROD, RAIL, HOOP, SHEET AND WIRE.
Claims use since 1883.

Reg. No. 136,878. Registered Nov. 9, 1920. THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Republished by The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR METAL BALLS FOR PLUGGING DRY WELLS, BABBITT METAL, SOLDER, PIG-LEAD, SHEET-LEAD, TOOL-STEEL, WIRE MADE FROM STEEL, IRON, BRASS, AND COPPER, STEEL AND IRON IN THE FORM OF RODS AND BARS, AND ANVILS.
Claims use since 1900.

Reg. No. 282,235. Registered Apr. 14, 1931. THE AMERICAN METAL COMPANY (LIMITED), New York, N. Y., a corporation of New York. Republished by registrant.

FOR METAL PRODUCTS—NAMELY, COPPER IN CAKES, BARS, OR INGOTS.
Claims use since July 19, 1930.

Reg. No. 283,049. Registered May 12, 1931. THE AMERICAN METAL COMPANY (LIMITED), New York, N. Y., a corporation of New York. Republished by registrant.

VC

FOR METAL PRODUCTS—NAMELY, COPPER IN CAKES, BARS, OR INGOTS.
Claims use since Dec. 23, 1930.

Reg. No. 312,273. Registered Apr. 24, 1934. THE AMERICAN METAL COMPANY (LIMITED), New York, N. Y., a corporation of New York. Republished by registrant.

OFHC

FOR COPPER IN THE FORM OF WIRE BARS, BILLETS, CAKES, AND THE LIKE.
Claims use since Dec. 24, 1931.

CLASS 15

OILS AND GREASES

Reg. No. 317,504. Registered Sept. 25, 1934. THE CANFIELD OIL COMPANY, Cleveland, Ohio. Republished by Western Auto Supply Company, Kansas City, Mo., a corporation of Missouri.

The drawing is lined for shading only. The words "Good Penn" are disclaimed apart from the mark as shown.
FOR LUBRICATING OILS AND GREASES.
Claims use since May 8, 1934.

Reg. No. 385,302. Registered Feb. 25, 1941. MILLER & HOLMES, INC., St. Paul, Minn., a corporation of Minnesota. Republished by registrant.

The drawing is lined for the color red.
FOR GASOLINE.
Claims use since Jan. 1, 1931.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 159,079. Registered Sept. 19, 1922. RUTLAND FIRE CLAY CO., Rutland, Vt., a corporation of Vermont. Republished by registrant.

The shading is not intended to represent any particular color.
FOR STOVEPIPE PAINT ENAMEL NOW CALLED "BLACK ENAMEL", ASPHALT ROOF PAINT NOW CALLED "ASPHALT PAINT", AND TINNERS' RED ROOF PAINT NOW CALLED "RED METAL ROOF PAINT".
Claims use since sometime in 1913.

Reg. No. 207,016. Registered Dec. 15, 1925. HARRY LEONARD GREENBAUM, doing business as Technical Color & Chemical Works, Brooklyn, N. Y. Republished by Technical Color & Chemical Works, Inc., Brooklyn, N. Y., a corporation of New York.

RED-DEVIL

The drawing is lined for the color red.
FOR PREPARED SHELLAC, BANANA BRONZING LIQUIDS, HARD-WAX POLISH, BLACK ASPHALTUM PAINT, PAINT ENAMEL, FLAT WALL FINISH, OIL STAINS AND PAINT AND VARNISH REMOVER.
Claims use since May 1917.

Reg. No. 293,073. Registered Apr. 5, 1932. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

COLOTEC

FOR LINSEED OIL, TURPENTINE, PAINT AND ENAMEL COLORING, PIGMENTS, WOOD STAIN, PREPARED SHELLAC, WALL FINISH FLAT PAINT, PAINT AND VARNISH REMOVER, ENAMEL UNDERCOAT, READY PREPARED PAINTS, VARNISHES, LACQUERS, AND PAINT ENAMEL.
Claims use since Mar. 1, 1931.

Reg. No. 336,402. Registered July 7, 1936. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Wescote

FOR READY-MIXED PAINTS, PAINT ENAMELS, VARNISHES, AND VARNISH STAINS.
Claims use since on or about July 1, 1935.

Reg. No. 353,690. Registered Jan. 11, 1938. THE WESTERN AUTO SUPPLY COMPANY, doing business as Western Auto Stores, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Nam-Tone

FOR PAINT ENAMEL.
Claims use since Apr. 5, 1937.

Reg. No. 379,148. Registered July 2, 1940. ANDREW BROWN COMPANY, Los Angeles, Calif. Republished by Andrew Brown Company, Los Angeles, Calif., a firm.

Brolite
Z-SPAR

The word "Spar" is disclaimed.
FOR PAINT ENAMEL.
Claims use since Feb. 2, 1940.

Reg. No. 382,445. Registered Oct. 29, 1940. STANDARD INDUSTRIAL PRODUCTS, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

Wear-Master

FOR READY MIXED PAINTS, VARNISHES, METALLIC LACQUER, ENAMEL AND FURNITURE LACQUER.
Claims use since March 1940.

Reg. No. 383,150. Registered Nov. 26, 1940. STANDARD INDUSTRIAL PRODUCTS, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

Weather-Master

FOR HOUSE PAINTS, PAINT ENAMELS, LACQUER, VARNISHES, PAINT COMPOSITIONS AND COATINGS ADAPTED FOR OUTSIDE USE AND FOR OUTSIDE SURFACES INCLUDING ROOF SURFACES, WHITE LEAD AND MACHINERY PAINTS.
Claims use since April 1940.

Reg. No. 392,220. Registered Dec. 16, 1941. C. A. NASH & SON, INC., Norfolk, Va., a corporation of Virginia. Republished by registrant.

SEA-COAST LINER-COTE

The word "Liner-Cote" is disclaimed apart from the mark as shown.

FOR PAINTS AND PAINT ENAMELS, SOLD IN PASTE AND READY MIXED FORM.

Claims use since 1937.

Reg. No. 402,058. Registered June 29, 1943. KEN-NITE COMPANY, Detroit, Mich. Republished by Western Auto Supply Company, Kansas City, Mo., a corporation of Missouri.

Poli-wax

The word "Wax" is disclaimed apart from the mark as shown.

FOR CLEANER, WAX AND POLISH.

Claim use since Feb. 27, 1939.

Reg. No. 416,943. Registered Oct. 9, 1945. PEARCE L. MEADOWS, doing business as Elroy Naval Stores Co., Vidalia, Ga. Republished by El Roy Naval Stores Co., Inc., Vidalia, Ga., a corporation of Georgia.

FOR PAINT THINNER.

Claims use since Jan. 1, 1940.

Reg. No. 423,278. Registered Aug. 27, 1946. MASON PAINT CO., INC., Louisville, Ky., a corporation of Kentucky. Republished by registrant.

STIL-TEX

FOR PAINTS SOLD IN DRY, PASTE AND READY-MIXED FORMS.

Claims use since June 1940.

Reg. No. 433,047. Registered Sept. 23, 1947. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

KELTEX

FOR ALGIN PRODUCT FOR USE IN WATER PAINTS, SUCH AS THE RESIN EMULSION TYPE PAINTS AND THOSE CONTAINING PROTEIN BINDERS, AS A SUSPENDING AND VISCOSITY CONTROLLING AGENT AND TO IMPROVE THE BRUSHING CHARACTERISTICS.

Claims use since Apr. 6, 1937.

CLASS 19

VEHICLES

Reg. No. 289,563. Registered Dec. 1, 1931. WESTERN AUTO SUPPLY CO., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Western Flyer

FOR BICYCLES, TRICYCLES.

Claims use since June 1, 1931.

Reg. No. 291,095. Registered Jan. 26, 1932. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

Mack

FOR MOTOR TRUCKS.

Claims use since Dec. 16, 1930.

Reg. No. 303,673. Registered June 6, 1933. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

FOR SELF-PROPELLED COMMERCIAL MOTOR TRUCKS AND TRACTOR TRUCKS.

Claims use since on or about Nov. 1, 1932.

Reg. No. 328,409. Registered Sept. 24, 1935. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

ARCHIMOID

FOR STEERING GEARS.

Claims use since Mar. 21, 1930.

Reg. No. 343,811. Registered Mar. 9, 1937. BARRETT-CRAVENS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representations of the goods and the words "Handling Equipment" are disclaimed.

FOR MATERIAL HANDLING EQUIPMENT—NAMELY, LIFT-TRUCKS, BARREL TRUCKS, ROCKER-ACKS.

Claims use since May 28, 1921.

Reg. No. 344,788. Registered Apr. 6, 1937. STEWART-WARNER CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

SOUTH-WIND

FOR AUTOMOBILE HEATERS OF THE INTERNAL COMBUSTION TYPE.

Claims use since Sept. 23, 1936.

Reg. No. 419,362. Registered Feb. 12, 1946. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Country Club

FOR SEAT COVERS FOR MOTOR VEHICLES.

Claims use since June 18, 1945.

Reg. No. 419,363. Registered Feb. 12, 1946. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Fifth Avenue

FOR SEAT COVERS FOR MOTOR VEHICLES.

Claims use since June 18, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 233,495. Registered Oct. 4, 1927. ROGER G. LAFITE, doing business as Automotive Manufacturing Company, Kansas City, Mo. Republished by Electra Manufacturing Company, Kansas City, Mo., a corporation of Missouri.

Electra

FOR GENERATOR-BRUSH HOLDERS, BATTERY CABLES, GENERATOR HOUSINGS, GENERATOR BRACKETS, BATTERY-POST CLAMPS, TIMER HOUSINGS, INSULATED WIRE, AND SPARK PLUG LEAD WIRES.

Claims use since July 1926.

Reg. No. 255,370. Registered Apr. 23, 1929. SIGNAL ELECTRIC MANUFACTURING CO., Menominee, Mich., a corporation of Michigan. Republished by registrant.

SIGNAL

FOR ELECTRIC BELLS, BUZZERS, RELAYS, ELECTRIC BURGLAR ALARMS, ELECTRIC FANS, ELECTRIC PHONOGRAPH MOTORS, ELECTRIC MOTOR APPLIANCES—NAMELY, ALL TYPES OF MOTORS, MOTOR WINDING; AN ELECTRIC APPLIANCE WHICH MAKES POSSIBLE CONNECTIONS BETWEEN PHONOGRAPH RECORD AND RADIO LOUD SPEAKER BY THROWING THE SOUND WAVES THROUGH TWO OF THE RADIO TUBES; TELEGRAPH APPARATUS—NAMELY, RECEIVING AND SENDING TELEGRAPH INSTRUMENTS; WIRELESS APPARATUS—NAMELY, WIRELESS SENDING AND RECEIVING INSTRUMENTS.

Claims use since Sept. 1, 1919.

Reg. No. 310,873. Registered Mar. 13, 1934. ELECTRO-MASTER COMPANY, Detroit, Mich., assignor to Electromaster, Inc. Republished by Electromaster, Inc., Mount Clemens, Mich., a corporation of Michigan.

ELECTROMASTER

FOR ELECTRIC COOKING STOVES AND ELECTRICAL PARTS, SWITCHES AND CONNECTORS THEREFOR.

Claims use since July 26, 1929.

Reg. No. 322,050. Registered Feb. 26, 1935. WILLIAM J. HALLIGAN, doing business as "The Hallicrafters," Chicago, Ill. Republished by The Hallicrafters Co., Chicago, Ill., a corporation of Illinois.

The SKYRIDER

FOR RADIO RECEIVING SETS.

Claims use since February 1934.

Reg. No. 335,050. Registered May 19, 1936. THE ARROW-HART & HEGEMAN ELECTRIC COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

IVORYLITE

FOR ELECTRIC SWITCH HANDLES, ELECTRIC OUTLETS, SWITCH PLATES, OUTLET PLATES AND COVER PLATES.

Claims use since Aug. 6, 1935.

Reg. No. 337,570. Registered Aug. 11, 1936. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

WL

FOR ELECTRIC RHEOSTATS, ELECTRIC ILLUMINATION CONTROL APPARATUS FOR AFFECTING THE CONNECTIONS OF ELECTRIC LIGHT CIRCUITS AND THE CURRENT AND VOLTAGE, AND OF ELECTRIC LIGHTING DEVICES, ELECTRIC MOTOR STARTERS, ELECTRIC MOTOR CONTROLLERS FOR AFFECTING THE CIRCUITS AND OPERATION OF THE MOTORS, ELECTRIC RESISTORS BOTH FIXED AND ADJUSTABLE, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RECTIFIERS, ELECTRIC THEATRE DIMMERS, ELECTRIC CONTACTORS, ELECTRIC BATTERY CHARGING CONTROLLERS, AND ELECTRIC CIRCUIT CONTROLLERS FOR CHANGING CIRCUIT CONNECTIONS IN A PREDETERMINED MANNER AND OTHERWISE.

Claims use since May 16, 1927.

Reg. No. 341,752. Registered Dec. 22, 1936. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

WIZARD *De Luxe*

FOR SPARK PLUGS AND SPARK PLUG PORCELAINS.

Claims use since May 6, 1936.

Reg. No. 348,143. Registered July 20, 1937. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

HYSTERSET

FOR ELECTRIC ILLUMINATION CONTROL APPARATUS FOR CHANGING THE CONNECTIONS OF ELECTRIC LIGHT CIRCUITS AND CONTROLLING THE CURRENT AND VOLTAGE OF ELECTRIC LIGHTING DEVICES, ELECTRIC RECTIFIERS, ELECTRIC CONTROL APPARATUS IN WHICH RECTIFIED CURRENT IS VARIED OR REGULATED, ELECTRIC THEATRE DIMMERS, ELECTRIC VOLTAGE REGULATORS, ELECTRIC GENERATOR FIELD REGULATORS AND ELECTRIC CIRCUIT CONTROLLERS FOR CHANGING CIRCUIT CONNECTIONS IN A PREDETERMINED MANNER.

Claims use since June 27, 1934.

Reg. No. 348,307. Registered July 20, 1937. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

AUTRASTAT

FOR ELECTRIC CONTROL APPARATUS FOR CONTROLLING AND VARYING THE CURRENT AND VOLTAGE OF ELECTRIC CIRCUITS, ELECTRIC THEATRE DIMMERS, ALTERNATING CURRENT APPARATUS FOR CONTROLLING AND VARYING THE CURRENT AND VOLTAGE OF CONSUMPTION CIRCUITS AND AUTO-TRANSFORMERS.

Claims use since Feb. 24, 1937.

Reg. No. 396,090. Registered June 30, 1942. AMERICAN FLUORESCENT LIGHTING CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

Friolite

FOR FLUORESCENT LAMPS, ELECTRICAL LIGHTING FIXTURES, ELECTRICAL APPLIANCES—NAMELY, BULBS, STARTERS, STARTER SWITCHES, STARTER SOCKETS, LAMPHOLDERS, COMPENSATORS, BALLASTS, TRANSFORMERS, REACTORS, CAPACITORS, CONDENSERS, CHOKE COILS, COILS, RESISTORS, RELAYS, AND AUXILIARIES.

Claims use since May 1, 1941.

Reg. No. 423,605. Registered Sept. 3, 1946. AFFILIATED RETAILERS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ARTONE

FOR RADIO RECEIVING SETS—NAMELY, MANTEL SETS, CONSOLE SETS, PORTABLES AND RADIO PHONOGRAPH COMBINATION SETS.

Claims use since Nov. 23, 1945.

Reg. No. 424,180. Registered Sept. 24, 1946. PAUL ELLIOTT GREENBLAT, Brooklyn, N. Y. Republished by registrant.

ELLIOTT

CROWN

The word "Elliott" is disclaimed apart from the mark as shown.

FOR ELECTRIC LAMPS.

Claims use since Aug. 20, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 211,403. Registered Apr. 13, 1926. BUFFALO WEAVING & BELTING COMPANY, Buffalo, N. Y., a corporation of New York. Republished by registrant.

"Buffalo" Quality

The word "Quality" is disclaimed apart from the mark as shown.

FOR WOVEN TRUNK STRAPS, WOVEN RAZOR STROPS, WOVEN SKATE STRAPS, AND WOVEN BAG STRAPS.

Claims use since on or about Aug. 2, 1920.

Reg. No. 233,736. Registered Oct. 11, 1927. KOHLER DIE & SPECIALTY COMPANY, De Kalb, Ill. Republished by Frantz Manufacturing Company, Sterling, Ill., a corporation of Illinois.

SPEED KING

FOR ROLLER SKATES.

Claims use since Jan. 17, 1922.

Reg. No. 289,563. Registered Dec. 1, 1931. WESTERN AUTO SUPPLY CO., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Western Flyer

FOR BICYCLES, TRICYCLES.

Claims use since June 1, 1931.

Reg. No. 294,438. Registered May 24, 193[illegible]. CHICAGO ROLLER SKATE COMPANY, Chicago, Ill., a corporation of Arizona. Republished by registrant.

The representation of a skate is disclaimed apart from the mark as shown.

FOR ROLLER SKATES.

Claims use since January 1907.

Reg. No. 294,439. Registered May 24, 1932. CHICAGO ROLLER SKATE COMPANY, Chicago, Ill., a corporation of Arizona. Republished by registrant.

The representation of a skate is disclaimed apart from the mark as shown.

FOR ROLLER SKATES.

Claims use since January 1907.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 70,024. Registered July 21, 1908. THE OSTER MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

OSTER

FOR THREAD CUTTING TOOLS, MACHINES AND DEVICES.

Claims use since about March 1894.

Reg. No. 98,123. Registered July 7, 1914. BOETTCHER & KELLOGG CO., Evansville, Ind., a corporation of Indiana. Republished by registrant.

Bee-Kay

FOR SAWS, HATCHETS, CLAW-HATCHETS, SHINGLING-HATCHETS, RIG-BUILDERS' HATCHETS, AXES, HALF-AXES, BROAD AXES, SHIP-AXES, ROOFING-SHEARS, POCKET-HAMMERS, AND DATZ HATCHETS.

Claims use since Sept. 15, 1913.

Reg. No. 18,287. Registered Jan. 8, 1924. GREENE, TWEED & CO., New York, N. Y., a corporation of New York. Republished by registrant.

FAVORITE

FOR WRENCHES AND PARTS THEREOF.
Claims use since July 1894.

Reg. No. 205,320. Registered Nov. 3, 1925. THE DORR COMPANY, New York, N. Y. Republished by The Dorr Company (1943), New York, N. Y., a corporation of Delaware.

DORRCO

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS—NAMELY, AGITATORS, SEWAGE CLARIFIERS, WATER CLARIFIERS, CANE-JUICE CLARIFIERS, CLASSIFIERS, BOWL CLASSIFIERS, THICKENERS, TRAY THICKENERS, WASHERS, ROTARY CONVEYERS, SAVEALLS, SLURRY MIXERS, AND CORD DIAPHRAGMS FOR PUMPS
Claims use since Sept. 15, 1923.

Reg. No. 227,553. Registered May 10, 1927. J. E. RHOADS & SONS, Philadelphia, Pa., a firm. Republished by registrant.

TANNATE

FOR LUG STRAPS, LOOM STRAPS, HARNESS STRAPS, PICKER STRAPS, CHECK STRAPS, DOBBY STRAPS, AND BEATER STRAPS FOR USE ON TEXTILE MACHINERY.
Claims use since July 19, 1926.

Reg. No. 248,626. Registered Oct. 23, 1928. THE DORR COMPANY, New York, N. Y. Republished by The Dorr Company (1943), New York, N. Y., a corporation of Delaware.

DETRITOR

FOR APPARATUS FOR THE TREATMENT OF SOLIDS SUSPENDED IN LIQUIDS, AND MORE PARTICULARLY FOR THE CLASSIFICATION OF SUSPENDED SOLIDS AND THE REMOVAL OF SUCH SOLIDS—NAMELY, CLASSIFIERS, BOWL CLASSIFIERS AND MECHANICALLY CLEANED GRIT CHAMBERS.
Claims use since Feb. 21, 1928.

Reg. No. 313,729. Registered June 5, 1934. GREENE, TWEED & CO., New York, N. Y., a corporation of New York. Republished by registrant.

BASA

FOR HAMMERS, MALLETS, AND MAULS.
Claims use since Nov. 24, 1933.

Reg. No. 333,894. Registered Apr. 14, 1936. THE NEW HAVEN VIBRATOR COMPANY, INC., New Haven, Conn. Republished by New Haven Vibrator Company, New Haven, Conn., a co-partnership.

1915 BRANFORD VIBRATORS

The word "Vibrators" is disclaimed apart from the mark as shown.
FOR PNEUMATIC TOOLS—NAMELY, VIBRATORS FOR FOUNDRY AND SIMILAR USE.
Claims use since on or about December 1915.

Reg. No. 343,811. Registered Mar. 9, 1937. BARRETT-CRAVENS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Barrett Handling Equipment

The representations of the goods and the words "Handling Equipment" are disclaimed.
FOR MATERIAL HANDLING EQUIPMENT—NAMELY, LIFT-TRUCKS, BARREL TRUCKS, ROCKERACKS.
Claims use since May 28, 1921.

Reg. No. 345,427. Registered Apr. 27, 1937. THE MARLIN FIREARMS COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant.

Marlin

FOR SAFETY RAZOR BLADES.
Claims use since on or about Nov. 1, 1935.

Reg. No. 378,112. Registered May 28, 1940. PARAMOUNT TEXTILE MACHINERY CO., Kankakee and Chicago, Ill., a corporation of Illinois. Republished by registrant, present location Chicago, Ill.

PARAMOLD

FOR APPARATUS FOR BOARDING, BLOCKING OR SETTING THE SHAPE OF ARTICLES MADE FROM TEXTILE FABRIC, FLAT PIECE GOODS, OR TEXTILE YARNS OR THE COMPONENTS THEREOF.
Claims use since Nov. 16, 1939.

Reg. No. 379,331. Registered July 9, 1940. THE FAIRFIELD ENGINEERING COMPANY, Marion, Ohio, a corporation of Ohio. Republished by registrant.

Smoothflo

FOR PORTABLE CONVEYORS OF THE ADJUSTABLE BOOM TYPE USED FOR ELEVATING MATERIAL PILED ON THE GROUND.
Claims use since Jan. 30, 1940.

Reg. No. 386,827. Registered Apr. 22, 1941. WILLIAM SELLERS & COMPANY, INCORPORATED, Philadelphia, Pa. Republished by Consolidated Machine Tool Corporation, Rochester, N. Y., a corporation of Delaware.

POWER-FLOW

FOR PLANERS FOR METAL WORKING APPARATUS.
Claims use since Apr. 6, 1939.

Reg. No. 404,188. Registered Nov. 9, 1943. THE BUDA COMPANY, Harvey, Ill., a corporation of Illinois. Republished by registrant.

BUDA

FOR ENGINES—NAMELY, GASOLINE ENGINES, DIESEL ENGINES, NATURAL GAS ENGINES, AUTOMOTIVE ENGINES, MARINE ENGINES, AND ENGINES FOR BUSES, TRUCKS, TRACTORS, ROAD BUILDING EQUIPMENT, INDUSTRIAL POWER UNITS, AND GENERATOR SETS; PUMPS, POWER PUMPING UNITS; LIFTING JACKS, DRILLS, POWER PLANTS, AND RAILROAD MACHINERY AND TOOLS—NAMELY, TRACK DRILLS, BONDING DRILLS, TOOL GRINDERS, RAIL BENDERS, SWITCH STANDS, TIE PULLERS, TIE NIPPERS, TIE LINERS, CROSSING GATES, CAR REPLACERS, MECHANICAL SWITCHES, TIE TAMPERS, AND TRENCH BRACES, AND PARTS FOR EACH AND ALL OF THE FOREGOING.
Claims use since 1881.

Reg. No. 415,309. Registered Aug. 7, 1945. SYNTRON COMPANY, Homer City, Pa., a corporation of Delaware. Republished by registrant.

SYNTRON

FOR HYDRAULIC AND PNEUMATIC VIBRATORS AND THEIR CONTROLS FOR USE IN VIBRATING, INDUSTRIAL FEEDING, CONVEYING, SCREENING AND OTHER APPARATUS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Dec. 1, 1922.

Reg. No. 427,561. Registered Feb. 11, 1947. PORST BROTHERS, Chicago, Ill., assignor to Porst Bros. Mfg. Co., Chicago, Ill. Republished by Porst Bros. Mfg. Co., Chicago, Ill., a corporation of Illinois.

Levermatic

FOR COLLET CHUCKS.
Claims use since Apr. 3, 1946.

Reg. No. 431,617. Registered July 29, 1947. ADAMS PLASTICS CO., INC., Holyoke, Mass., a corporation of Massachusetts. Republished by registrant.

Pakkawood

FOR CUTLERY HANDLES AND PICKER STICKS MADE OF WOOD.
Claims use since January 1945.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 358,263. Registered July 5, 1938. PARAMOUNT TEXTILE MACHINERY CO., Kankakee and Chicago, Ill., a corporation of Illinois. Republished by registrant, present location Chicago, Ill.

PARAFLEX

FOR GARMENT DRYING FORMS SUCH AS FORMS USED FOR DRYING OR SHAPING HOSIERY OR OTHER ARTICLES OF WEARING APPAREL.
Claims use since Sept. 14, 1937.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 356,669. Registered May 10, 1938. BAILEY METER COMPANY, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

SYNCHRO-METER

The word "Meter" per se is disclaimed apart from the mark as shown.
FOR QUANTITY MEASURING APPARATUS OF FLOWING FLUIDS INCLUDING RECORDERS, INDICATORS, AND INTEGRATORS AND CHARTS AND ACCESSORIES THEREFOR.
Claims use since about June 4, 1936.

Reg. No. 397,956. Registered Sept. 29, 1942. JOSEPH P. LANNEN, doing business as Commerce Pattern, Foundry & Machine Company, Detroit, Mich. Republished by Micro-Poise Engineering and Sales Company, Detroit, Mich., a partnership.

MICRO-POISE

FOR MACHINES FOR TESTING BALANCE OF TIRES AND OTHER CIRCULAR MEMBERS ADAPTED FOR ROTATION, AND ALSO MACHINES FOR TESTING AND CORRECTING SUCH BALANCE.

FOR CANNED OYSTERS, SHRIMP, LOBSTER, CLAMS, CRABS, AND FISH.

Claims use since about Jan. 1, 1840.

Reg. No. 62,661. Registered May 21, 1907. THOMAS KENSETT & Co., Baltimore, Md. Republished by Lord-Mott Company, Inc., Baltimore, Md., a corporation of Maryland.

IMPERIAL

FOR CANNED FRUITS AND VEGETABLES.

Claims use since about Jan. 1, 1840.

Reg. No. 70,918. Registered Oct. 13, 1908. FENN BROS. INC., Sioux Falls, S. D., a corporation of South Dakota. Republished by registrant.

BLUE SEAL

FOR CHOCOLATE NOUGAT BARS.
Claims use since Jan. 1, 1908.

Reg. No. 79,930. Registered Oct. 18, 1910. PARROTT & Co., San Francisco, Calif., a corporation of California. Republished by registrant.

CORAL

FOR CANNED CRAB MEAT.
Claims use since on or about June 10, 1910.

Reg. No. 91,001. Registered Apr. 8, 1913. FRANKLIN MAC VEAGH AND COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TELMO

FOR CANNED VEGETABLES, CANNED FRUITS, EVAPORATED FRUITS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since 1904.

Reg. No. 92,077. Registered June 17, 1913. HUNTER MILLING COMPANY, Wellington, Kans., a corporation of Kansas. Republished by registrant.

The name "Hunters" is disclaimed apart from the mark as shown. The outer border is printed in red, and the letters are printed in red on a green background.
FOR WHEAT FLOUR.
Claims use since Feb. 28, 1910.

Reg. No. 121,637. Registered May 14, 1918. EDGAR-MORGAN COMPANY, Memphis, Tenn. Republished by Happy Mills (1944), Memphis, Tenn., a firm.

OLD BECK

FOR STOCK FEED.
Claims use since July 1912.

Reg. No. 122,375. Registered July 30, 1918. COAST FISHING COMPANY, Wilmington, Calif., a corporation of California. Republished by registrant.

TREASURE

FOR CANNED SARDINES, PACKED IN COTTON SEED OIL AND SPICED TOMATO SAUCE.
Claims use since Dec. 2, 1917.

Reg. No. 151,786. Registered Feb. 14, 1922. GREENABAUM BROS., INC., Seaford, Del. Republished by E. Pritchard, Inc., Bridgeton, N. J., a corporation of New Jersey.

NANTICOKE

FOR CATSUP AND CHILLI SAUCE.
Claims use since Oct. 1, 1920.

Reg. No. 156,679. Registered July 11, 1922. GREENABAUM BROS. INC., Seaford, Del. Republished by E. Pritchard, Inc., Bridgeton, N. J., a corporation of New Jersey.

SUNDALE

FOR TOMATO CATCHUP, CHILI SAUCE AND CANNED PORK AND BEANS.
Claims use since Sept. 1, 1921.

Reg. No. 172,873. Registered Sept. 11, 1923. CENTRAL WISCONSIN CANNERIES, Beaver Dam, Wis. Republished by Minnesota Valley Canning Company, Lesueur, Minn., a corporation of Minnesota.

Dew Maid

FOR CANNED GOODS—NAMELY, PEAS.
Claims use since Feb. 1, 1922.

Reg. No. 177,214. Registered Dec. 11, 1923. IDEAL CARAMEL COMPANY, INC., Johnson City, N. Y. Republished by Fair Play Caramels, Inc., Middletown, N. Y., a corporation of New York.

FAIR PLAY

FOR CANDIES, CANDY CONFECTIONS, SWEETMEATS, CHEWING GUM.
Claims use since January 1922.

Reg. No. 177,763. Registered Dec. 25, 1923. IDEAL CARAMEL COMPANY, INC., Johnson City, N. Y. Republished by Fair Play Caramels, Inc., Middletown, N. Y., a corporation of New York.

THE VALLEY OF FAIR PLAY

FOR CANDIES, CANDY CONFECTIONS, SWEETMEATS, CHEWING GUM.
Claims use since January 1922.

Reg. No. 188,102. Registered Aug. 19, 1924. ROY E. ROBERTS, doing business as Lord-Mott Co., Baltimore, Md. Republished by Lord-Mott Company, Inc., Baltimore, Md., a corporation of Maryland.

OLD RELIABLE BRAND

FOR CANNED FRUIT AND VEGETABLES.
Claims use since 1836.

Reg. No. 205,606. Registered Nov. 10, 1925. KNICKERBOCKER MILLS CO., New York, N. Y., a corporation of New York. Republished by registrant.

Irvo

FOR PASTRY SPICE.
Claims use since June 30, 1906.

Reg. No. 225,887. Registered Mar. 29, 1927. WILKINSON BROS., Calipatria, Calif. Republished by Wilkinson Brothers, Inc., Calipatria, Calif., a corporation of California.

GOLD BAND

FOR FRESH VEGETABLES—NAMELY, TOMATOES, LETTUCE; MELONS—NAMELY, CANTALOUPES.
Claims use since Mar. 1, 1925.

Reg. No. 238,535. Registered Feb. 7, 1928. THOS. D. RICHARDSON COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Richardson's

FOR CANDY.
Claims use since January 1924.

Reg. No. 240,300. Registered Mar. 20, 1928. ATMORE & SON, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Happy Jack

FOR MINCEMEAT.
Claims use since Oct. 12, 1927.

Reg. No. 255,630. Registered Apr. 30, 1929. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

Silver Nip

FOR GRAPEFRUIT JUICES FOR MAKING NONALCOHOLIC, NONCEREAL, MALTLESS BEVERAGES.
Claims use since Aug. 3, 1928.

Reg. No. 259,726. Registered Aug. 6, 1929. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

Singing Tower

FOR CANNED GRAPEFRUIT.
Claims use since Mar. 26, 1929.

Reg. No. 262,612. Registered Oct. 15, 1929. THE LIGHT GRAIN & MILLING CO., Liberal, Kans., a firm. Republished by registrant.

Fairy Queen

FOR WHEAT FLOUR AND SELF-RISING FLOUR.
Claims use since May 10, 1929.

Reg. No. 265,117. Registered Dec. 17, 1929. THE LIGHT GRAIN & MILLING CO., Liberal, Kans., a firm. Republished by registrant.

MAMMY'S PRIDE

FOR WHEAT FLOUR.
Claims use since Apr. 16, 1929.

Reg. No. 265,714. Registered Jan. 7, 1930. W. L. CRAFT, doing business as Dixie Syrup Company, Florence, Ala. Republished by registrant.

Pride of Dixie

FOR TABLE SYRUPS.
Claims use since Feb. 1, 1928.

Reg. No. 269,401. Registered Apr. 8, 1930. NORTHLAND CANNING COMPANY, Cokato, Minn., a corporation of Minnesota. Republished by registrant.

DISH O'GOLD

FOR CANNED CORN.
Claims use since Sept. 15, 1928.

Reg. No. 271,023. Registered May 20, 1930. WEST FLORIDA PRESERVING COMPANY, INC., Bradenton, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

GULF BREEZE

FOR CANNED GRAPEFRUIT JUICE FOR FOOD PURPOSES AND CANNED TOMATO JUICE.
Claims use since Nov. 15, 1929.

Reg. No. 272,763. Registered July 15, 1930. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

SINGING TOWER

FOR FRESH CITRUS FRUITS AND FRESH VEGETABLES AND CANNED GRAPEFRUIT.
Claims use since Mar. 26, 1929.

Reg. No. 275,125. Registered Sept. 16, 1930. THE LIGHT GRAIN & MILLING CO., Liberal, Kans., a firm. Republished by registrant.

OVEN PERFECT FLOUR

The words "Perfect" and "Flour" are claimed only in association with the other features of the mark.
FOR WHEAT FLOUR.
Claims use since Nov. 26, 1929.

Reg. No. 276,013. Registered Oct. 7, 1930. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

The word "Flour" is disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since Nov. 2[illegible]30.

Reg. No. 278,154. Registered Dec. 9, 1930. H. L. SHERMAN, Boston, Mass. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

Pomorang

FOR CITRUS-FRUIT JUICES FOR FOOD PURPOSES.
Claims use since May 1, 1929.

Reg. No. 279,725. Registered Jan. 20, 1931. FLORIDA FRUIT CANNERS INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

GOLDEN NIP

FOR FRUIT JUICES FOR FOOD PURPOSES.
Claims use since Aug. 27, 1930.

Reg. No. 281,449. Registered Mar. 17, 1931. THE LIGHT GRAIN & MILLING CO., Liberal, Kans., a firm. Republished by registrant.

Light's

TRIPLE·A·A·A

FOR WHEAT FLOUR.
Claims use since Oct. 25, 1930.

Reg. No. 282,327. Registered Apr. 21, 1931. PARROTT & Co., San Francisco, Calif., a corporation of California. Republished by registrant.

Coral

FOR CANNED SARDINES.
Claims use since May 1, 1929.

Reg. No. 291,004. Registered Jan. 26, 1932. FLORIDA FRUIT CANNERS INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

SILVER SALAD

The word "Salad" is disclaimed apart from the mark as shown.
FOR CANNED COMBINATION OF GRAPEFRUIT AND HAWAIIAN PINEAPPLE.
Claims use since Jan. 9, 1931.

Reg. No. 299,766. Registered Dec. 20, 1932. DEVON BAKERIES, INC., New York, N. Y. Republished by Devonsheer Melba Corporation, West New York, N. J., a corporation of New Jersey.

DEVONSHEER

FOR TOAST.
Claims use since on or about July 27, 1932.

Reg. No. 301,337. Registered Feb. 28, 1933. THE LIGHT GRAIN & MILLING CO., Liberal, Kans., a firm. Republished by registrant.

GRIDDLE KING

FOR SELF-RISING PANCAKE FLOUR.
Claims use since Oct. 1, 1932.

Reg. No. 302,799. Registered Apr. 25, 1933. THE CITIZENS' WHOLESALE SUPPLY COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

GOLDEN RULE

FOR BAY LEAVES, DRIED BEANS, BEEF EXTRACT, BIRD SEED, BUCKWHEAT FLOUR, AND ALL THE OTHER ITEMS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since Oct. 31, 1894.

Reg. No. 302,800. Registered Apr. 25, 1933. THE CITIZENS' WHOLESALE SUPPLY COMPANY, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

FOR BAY LEAVES, DRIED BEANS, BEEF EXTRACT, AND ALL THE OTHER ITEMS NAMED IN THE ORIGINAL REGISTRATION.
Claims use since Oct. 31, 1894.

Reg. No. 329,355. Registered Oct. 29, 1935. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

OVEN ACE

FOR WHEAT FLOUR.
Claims use since May 17, 1935.

Reg. No. 336,436. Registered July 7, 1936. CONWAY IMPORT CO., INC., Long Island City, N. Y., a corporation of New York. Republished by registrant.

PALATA

FOR SALAD OIL.
Claims use since 1913.

Reg. No. 340,867. Registered Nov. 24, 1936. THE HUNTER MILLING COMPANY, Wellington, Kans., a corporation of Kansas. Republished by registrant.

The drawing is lined for shading only.
FOR WHEAT FLOUR.
Claims use since 1927.

Reg. No. 340,920. Registered Nov. 24, 1936. NORTHLAND CANNING CO., Cokato, Minn., a corporation of Minnesota. Republished by registrant.

BANANA BANTAM

The word "Bantam" is disclaimed apart from the mark as shown.
FOR CANNED CORN.
Claims use since Aug. 20, 1935.

Reg. No. 341,211. Registered Dec. 1, 1936. NORTHVILLE LABORATORIES, INC., Northville, Mich., a corporation of Michigan. Republished by registrant.

GOLD LABEL

FOR FLAVORING EXTRACT FOR FOOD PURPOSES.
Claims use since May 23, 1933.

Reg. No. 348,052. Registered July 13, 1937. LAKELAND HIGHLANDS COOPERATIVE ASSOCIATION, Highlands City, Fla., a corporation of Florida. Republished by registrant.

SADDLE

FOR FRESH CITRUS FRUITS.
Claims use since Feb. 24, 1936.

Reg. No. 350,288. Registered Sept. 21, 1937. RAPPAHANNOCK COOPERATIVE FRUIT GROWERS, INC., Sperryville, Va., a corporation of Virginia. Republished by registrant.

SKYLINE DRIVE

FOR FRESH FRUIT—NAMELY, APPLES.
Claims use since Apr. 29, 1937.

Reg. No. 352,567. Registered Dec. 7, 1937. MINNESOTA MACARONI COMPANY, St. Paul, Minn., a corporation of Minnesota. Republished by registrant.

Jenny Lee's

FOR MACARONI FOOD PRODUCTS AND EGG NOODLES.
Claims use since Apr. 15, 1931.

Reg. No. 353,735. Registered Jan. 18, 1938. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

NIP

FOR CANNED GRAPEFRUIT JUICE FOR FOOD PURPOSES.
Claims use since Sept. 30, 1936.

Reg. No. 368,967. Registered July 11, 1939. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

Valley Gold

FOR CANNED GRAPEFRUIT, CANNED PEAS, CANNED TOMATO JUICE AND FRUIT JUICES FOR FOOD PURPOSES.
Claims use since May 21, 1937.

Reg. No. 370,558. Registered Aug. 29, 1939. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

RICHTEST

FOR CANNED FRUITS, AND CANNED FRUIT JUICES FOR FOOD PURPOSES.
Claims use since Mar. 16, 1939.

Reg. No. 390,097. Registered Sept. 9, 1941. ALBANY PACKING COMPANY, INC., West Albany, N. Y. Republished by Tobin Packing Co., Inc., Rochester and Albany, N. Y., a corporation of Delaware.

The words "New York" and "Albany" and the map of the State of New York are disclaimed apart from the mark as shown.
FOR MEATS AND MEAT PRODUCTS — VIZ., CANNED HAMS.
Claims use since on or about Nov. 6, 1940.

Reg. No. 390,201. Registered Sept. 9, 1941. FLORIDA FRUIT CANNERS, INC., Frostproof, Fla. Republished by L. Maxcy, Inc., Frostproof, Fla., a corporation of Florida.

VITA-NIP

FOR CANNED FRUIT JUICES FOR FOOD PURPOSES.
Claims use since Feb. 18, 1941.

Reg. No. 397,236. Registered Aug. 25, 1942. LORD-MOTT COMPANY, INC., Baltimore, Md., a corporation of Maryland. Republished by registrant.

Lord-Mott's

FOR CANNED VEGETABLES, CANNED IRISH POTATOES, CANNED HOMINY, CANNED SPAGHETTI, CANNED PORK AND BEANS, CANNED SWEET POTATOES, THE FOREGOING GOODS BEING PACKED IN GLASS AS WELL AS IN CANS.
Claims use since 1836.

Reg. No. 411,181. Registered Jan. 9, 1945. HAPPY MILLS, Memphis, Tenn. Republished by Happy Mills (1944), Memphis, Tenn., a firm.

HAPPY

FOR FEED FOR LIVESTOCK, POULTRY, RABBITS, DOGS, AND PIGEONS.
Claims use since 1921.

Reg. No. 429,847. Registered May 20, 1947. L. AND S. PACKING CO., INC., Long Island City, N. Y., a corporation of New York. Republished by registrant.

TABLE JOY

FOR OLIVE OIL, BOTTLED PEPPERS, BOTTLED PIMENTOS, OLIVES, MARASCHINO CHERRIES, BOTTLED BELL PEPPERS.
Claims use since Apr. 15, 1946.

Reg. No. 433,010. Registered Sept. 23, 1947. C. F. SIMONIN'S SONS, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

POPSIT

PLUS!

FOR FOOD SEASONING MADE FROM VEGETABLE OILS AND BUTTER FLAVOR, SOLD IN BULK—NAMELY, IN CONTAINERS OF ONE-HALF GALLON OR LARGER SIZE.
Claims use since Feb. 28, 1946.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 305,854. Registered Aug. 29, 1933. MILLER HIGH LIFE COMPANY, Milwaukee, Wis. Republished by Miller Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

HIGH LIFE

FOR BEER.
Claims use since Apr. 7, 1933.

Reg. No. 305,855. Registered Aug. 29, 1933. MILLER HIGH LIFE COMPANY, Milwaukee, Wis. Republished by Miller Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

The word "Milwaukee" is disclaimed apart from the mark as shown.
FOR BEER.
Claims use since Apr. 7, 1933.

Reg. No. 305,870. Registered Aug. 29, 1933. MILLER HIGH LIFE COMPANY, Milwaukee, Wis. Republished by Miller Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR BEER.
Claims use since Dec. 30, 1903.

Reg. No. 305,871. Registered Aug. 29, 1933. MILLER HIGH LIFE COMPANY, Milwaukee, Wis. Republished by Miller Brewing Company, Milwaukee, Wis., a corporation of Wisconsin.

FOR BEER.
Claims use since Dec. 30, 1903.

Reg. No. 362,399. Registered Nov. 15, 1938. MILLER BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Miller

The word "Miller" is disclaimed apart from the mark as shown.

FOR BEER.

Claims use since Mar. 17, 1936.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 373,676. Registered Dec. 19, 1939. CHARTREUSE CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for the colors green and yellow. The representation of the labels and all spoken symbols except "La G de Chartreuse" and "L. Garnier" are disclaimed apart from the mark as shown.

FOR LIQUEURS.

Claims use since 1904.

Reg. No. 373,677. Registered Dec. 19, 1939. CHARTREUSE CORPORATION, New York, N. Y. a corporation of New York. Republished by registrant.

The drawing is lined for the colors yellow and green. The representation of the labels and all spoken symbols except "La G de Chartreuse" and "L. Garnier" are disclaimed apart from the mark as shown.

FOR LIQUEURS.

Claims use since 1904.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 236,306. Registered Dec. 6, 1927. CLARK, SON & MORLAND, LIMITED, Glastonbury, England, a corporation organized under the laws of the United Kingdom. Republished by registrant.

FOR SKIN RUGS AND MATS OF THE NATURE OF CARPETS, SKIN PERAMBULATOR RUGS AND ROBES, SKIN MOTOR RUGS, AND SKIN FOOT MUFFS FOR SLEIGHS.

Claims use since Dec. 13, 1895.

Reg. No. 271,642. Registered June 17, 1930. WEBSTER RUBBER COMPANY, Sabbatus, Maine, a corporation of Maine. Republished by registrant.

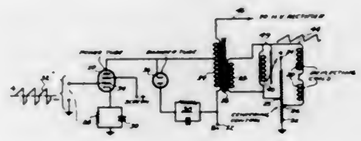
Rainbow

FOR RUBBER DOILIES.

Claims use since on or about Sept. 21, 1929.

PATENTS

GRANTED SEPTEMBER 28, 1948



2,449,969

COMPENSATING DEVICE

Antony Wright, Drexel Hill, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Application May 29, 1945, Serial No. 596,473

13 Claims. (Cl. 315—27)

1. In a cathode ray beam deflecting circuit of the type in which a cyclically varying current having a waveform a portion of each cycle of which is substantially linear with respect to time is caused to flow through a cathode ray beam deflecting coil to thereby result in substantially linear deflection of the cathode ray beam during the substantially linearly varying portion of each current cycle, said circuit including an inductive coupling element, a controlled power tube connected to supply cyclically varying current to said cathode ray beam deflecting coil through said inductive coupling element, a rectifier circuit connected across said inductive coupling element, said rectifier circuit including means for shaping the waveform of the current flowing through the rectifier circuit, a source of voltage variations, and means for applying voltage variations from said source to said power tube so as to produce a current output therefrom which adds to the current flowing through said rectifier circuit to result in a cyclically varying current flow through said cathode ray beam deflecting coil having a waveform a portion of each cycle of which is substantially linear with respect to time, the combination of an inductivity reactive control member connected across said inductive coupling element, and means for changing the reactance of said control member thereby to vary the peak amplitude of the cyclically varying current flowing through said cathode ray beam deflecting coil without appreciably altering the peak amplitude of the current output of said power tube.

2,449,970

STABILIZATION OF TERPENE POLYMERS

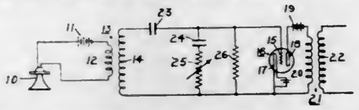
Joseph N. Borglin, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 15, 1946, Serial No. 641,419

11 Claims. (Cl. 260—80)

1. The method of stabilizing a solid terpene polymer derived from a polymerizable cyclic terpene which comprises contacting said polymer with about 0.01% to about 5% of iodine, based upon the weight of the polymer, at a temperature between about 200° C. and about 350° C.

2,449,971



APPARATUS FOR REDUCING NOISE IN MICROPHONE CIRCUITS

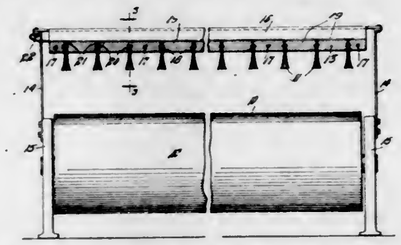
Joseph Frank Andrews, New York, N. Y.

Application February 26, 1944, Serial No. 523,993

1 Claim. (Cl. 179—1)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In an improved distortionless communication apparatus used with an oxygen mask for attenuating sounds impinging on a microphone therein, which sounds have a high magnitude at frequencies above and below the essential speech frequency band, the combination of a circuit for use with such apparatus including a first capacitor of such size as to offer a high impedance to frequencies of the order of 350 cycles and below, means having a negative resistance characteristic, said means being in series with a second capacitor, said means and said second capacitor being in shunt across said circuit for effecting a low impedance and hence increased shunting effect to signals of high magnitude at frequencies of the order of 3000 cycles and above, whereby the output of the circuit has an essentially flat frequency response within the speech frequency band.

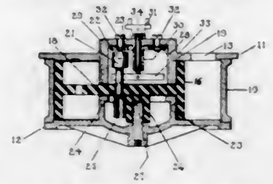


2,449,972

ELIMINATION OF STATIC ELECTRICITY

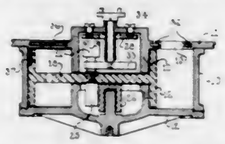
Robin Beach, Brooklyn, N. Y.

Application June 27, 1945, Serial No. 601,817



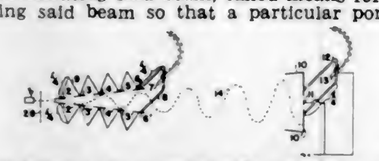
5 Claims. (Cl. 175—264)

1. The herein disclosed self-energizing apparatus for eliminating static electricity on an electrostatically charged surface, comprising a bar of insulating material having substantially constant dielectric strength of high value, elongated, yielding tufts of fine, flexible, sharp ended spring wire bristles on said insulating bar and projecting a substantial distance away therefrom, said bristles terminating with their ends all in substantially the same common plane, means mounting said insulating bar with said substantially coplanar ends of the bristles spaced away from the charged surface a distance normally of substantially three to four inches and sufficient to create and maintain intense con-



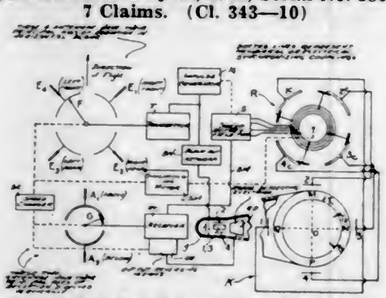
vergent electric fields of high potential gradient from said charged surface to the ends of said tufts to produce copious ionization at the tips of the bristles and a conductor of small mass connecting said fine wire bristles and connected to ground, said apparatus being thereby of low electrical capacitance and being unconnected with any local power source.

2,449,973
FLUID METER
Charles P. Bergman, Brooklyn, N. Y., assignor to Rockwell Manufacturing Company, a corporation of Pennsylvania.
Application July 17, 1944, Serial No. 545,237
9 Claims. (Cl. 73—257)



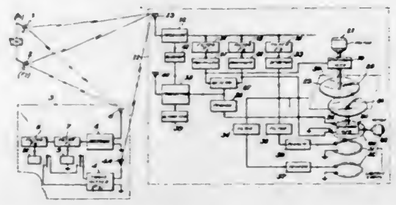
4. In a fluid meter of the oscillating piston displacement type, a measuring chamber, an oscillatory piston within said chamber, a permanent magnet fixed to the piston approximately at its axial center, an annular armature member substantially concentric to the path of movement of the magnet with the oscillatory piston, and adjustable means, mounting the armature member on a wall of the measuring chamber, for positioning said member relative to the magnet poles, whereby the weight of the piston is compensated by magnetic forces and said piston sustained substantially in a position of floating equilibrium within the fluid medium, throughout its cycle of oscillatory motion.

2,449,974
ROTARY FLUID METER
Charles P. Bergman, Brooklyn, N. Y.; William V. Elliott, administrator of said Charles P. Bergman, deceased, assignor to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 29, 1944, Serial No. 556,413
4 Claims. (Cl. 121—68)



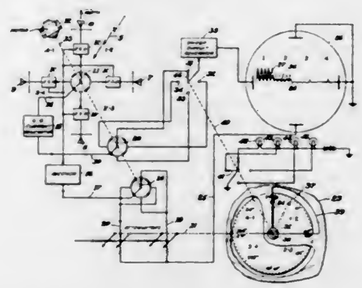
1. In a fluid meter having a measuring chamber, a piston adapted for movement in a substantially horizontal path within said chamber, and magnetically coupled means distributed circumferentially on said piston and said chamber for suspending said piston in balanced equilibrium for substantially frictionless movement in said path.

2,449,975
MICROWAVE VACUUM TUBE
Harold O. Bishop and Donald Kirk, Jr., United States Navy
Application June 21, 1946, Serial No. 678,177
7 Claims. (Cl. 250—158)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)
1. A device of the character described comprising means for producing an electron beam, means for accelerating said beam, tuned means for deflecting said beam so that a particular portion



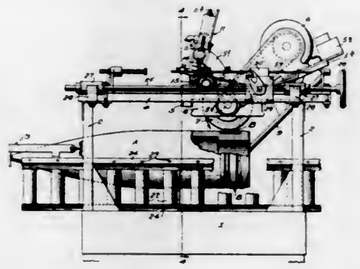
of the beam is successively deflected in the same direction, and means sensitive to variations in beam deflection for collecting said electron beam.

2,449,976
TRIDIMENSIONAL OBSTACLE DETECTION SYSTEM
Henri G. Busignies, Forest Hills, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application February 24, 1941, Serial No. 380,184
7 Claims. (Cl. 343—10)



4. Apparatus for determining the location of an object including radiant energy impulse transmitting apparatus for directively transmitting impulses in a plurality of directions in a common plane, receiving means responsive to impulse energy reflected from the object, cathode ray indicating means operated by said receiving means, a sweep circuit for the beam of said cathode ray indicating means for sweeping said cathode ray beam from a predetermined origin over a predetermined path, commutator means associated with said receiving means and said indicating means and operated in synchronism with the directing of said transmitting means, said commutator means serving to successively change said origin to provide for indication of received directive impulses on a portion of said indicating means corresponding to the general direction of the received reflected energy, said receiving means including antenna means directionally sensitive above and below said common plane, receiver network means responsive to received impulse energy from said antenna means for producing output impulses of the effective magnitude of reflected energy as received by said antenna means, and means responsive to said effective magnitude for modulating the beam of said cathode ray indicating means.

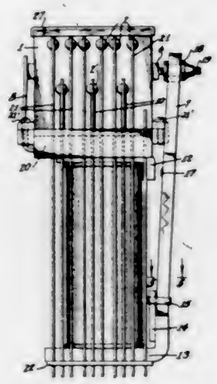
2,449,977
LOCATION INDICATING SYSTEM
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 30, 1945, Serial No. 602,448
24 Claims. (Cl. 343—112)
1. The method of indicating the relative positions of a receiving point with respect to a plurality of radiating and reradiating points which comprises, scanning the region of space around said radiating points by a pair of rotating radio beams originating at said radiating points and rotated at relatively different speeds, reradiating energy from said reradiation points when said beams are both aligned therewith, producing scanning motions at said receiving points syn-



chronized with rotation of said beacons from spaced points representing in scale the distance between said radiators, and causing indications to represent the position of said receiving point relative to said radiating points and said reradiating points in response to the operation of said scanning motions and the simultaneous reception of said beams and the reception of said reradiated energy respectively.

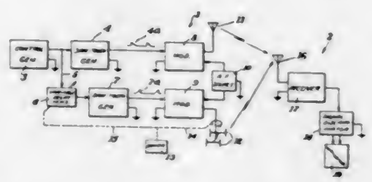
2,449,978
RADIO DIRECTION FINDER
Trevor H. Clark, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 30, 1945, Serial No. 602,451
3 Claims. (Cl. 343—120)

1. In a direction finder comprising a receiver a cathode ray tube four oppositely paired shielded unidirectional antennas, a switching means to couple each antenna independently and successively to said receiver, a variable attenuation means for each oppositely paired antenna circuits and coupled with said switching means for coupling the output of said receiver to one set of deflection means of said tubes, said tube having a screen divided into at least two adjacent zones corresponding to at least two adjacent antennas, a sweep circuit means having its output coupled to another set of deflection means of said tube and synchronized with said switching means an azimuth dial having sectors corresponding to each of said antennas to select that sector on said dial corresponding with a given zone on said screen of said tube, and means for varying said attenuation means and said azimuth dial simultaneously to obtain an indication of said selected sector of said dial of the direction of radiant energy received by said antennas.



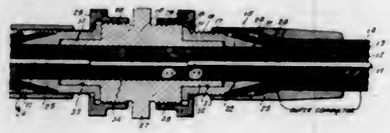
2,449,979
METHOD AND DEVICE FOR REMOVING ROTATING BANDS FROM PROJECTILES
Robert L. Clothier, Denville, N. J.
Application July 16, 1943, Serial No. 495,070
1 Claim. (Cl. 51—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A device for cutting the rotating bands of projectiles which comprises a base, a projectile trackway disposed longitudinally of said base for moving longitudinally oriented projectiles, upright members on either side of said trackway, a pair of parallel horizontal members supported by said upright members forming a track disposed longitudinally of said base and aligned vertically with said trackway, a carriage on said trackway mounted for longitudinal movement upon said track, an arm pivoted on said carriage for limited movement in a vertical plane parallel to said trackway, a power driven cutter carried by said arm in a plane parallel to the plane of movement of said arm, a motor carried by said arm and drivingly connected to said cutter, means for oscillating said arm about its pivot to raise and lower said cutter, means controllably moving said carriage upon said track, said arm and cutter being partially counterbalanced to weight said cutter for downward pivotal movement against a projectile band, controllable dashpot means for controlling the downward rate of pivotal cutting movement of said cutter, and adjustable stop means for stopping downward movement of said cutter after a predetermined depth of cut.



2,449,980
REMOVAL OF PHOTOGRAPHICALLY ACTIVE INGREDIENTS FROM GELATIN
Rudolph E. Damschroder and Marie E. Kauffman, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 14, 1946, Serial No. 697,156
7 Claims. (Cl. 260—118)
1. A method of treating a protein having inherent photographically active ingredients therein to render those photographically active ingredients inactive which comprises treating the protein while in solution with a finely divided metal selected from the group consisting of platinum, nickel, cobalt, lead, cadmium, and silver, followed by removing the metal particles and any reaction products thereof from the protein.

2,449,981
ELECTROMAGNETIC RELAY STRUCTURE
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 11, 1943, Serial No. 478,851
10 Claims. (Cl. 200—104)

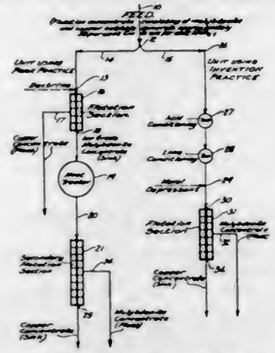


2. A relay switch structure comprising a separable switch housing unit open on at least one side thereof, externally extended terminal contacts and movable contacts cooperatively associated therewith for closing of the circuits therebetween and supported in the housing unit, an operating member mounted in bearings in the housing, a cover for the housing, a traction magnet assembly provided with resilient conductor bars supported thereon and positioned to engage the terminal contact of the housing unit for yieldable connection therewith and said magnet assembly including a movable armature and an adjustable connection between the armature and operating member.

2,449,982
RADIO BEACON
Louis A. de Rosa, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 12, 1944, Serial No. 539,815
18 Claims. (Cl. 343—106)

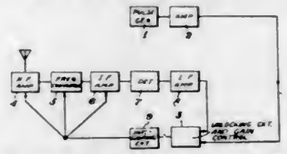
10. A multiple course radio beacon system, comprising a radio beacon including means for radiating a first series of pulses of predetermined timing substantially uniformly about said beacon, means for radiating a second series of pulses successively directively along each of said courses, means for variably timing the pulses of said second series with respect to the pulses of said first series to provide successively different spacings of said pulses along successively different courses, and means for shaping the pulses of said first and second series to provide sharp leading edges and gradually decreasing trailing edges for the pulses of one series and gradually increasing leading edges and sharp trailing edges for the pulses of the other series; and a cooperating radio receiver including means for receiving said radiated pulses, discriminator means for discriminating between the pulses of said first and second series, and indicator means for producing an indication of the course line represented by the relation of said received pulses of said first and second series.

2,449,983
COAXIAL LINE COUPLING
George C. Devol, Greenwich, Conn., assignor to The Sperry Corporation, a corporation of Delaware
Application February 4, 1943, Serial No. 474,740
15 Claims. (Cl. 174—88)



1. In a coupling adapted for straight through extension of a flexible transmission line having an inner conductor, a substantially coaxial outer conductor and an insulator covering about said outer conductor; the combination comprising a coupling member having a clamping face adapted to extend within said outer conductor, a clamp collar adapted to be inserted between said outer conductor and said covering, a holding member adjustably connected to said coupling member for tightly securing said outer conductor between said clamping face and said clamp collar and for securing said insulator covering between said holding member and said clamp collar, and conducting means coaxially supported within said coupling member and adapted to telescopically receive said inner conductor.

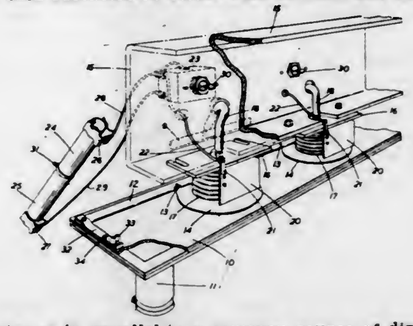
12. In a coupling between a first transmission line and a second transmission line, said two lines having respective inner conductors and hollow outer conductors of substantially the same inner diameter respectively concentrically disposed about said inner conductors; the combination comprising coupling means adapted to be inserted into the open end of said first line and extending between said first and said second lines, and a holding member adjustably connected to said coupling means for clamping said first line to said coupling means, said coupling means having a continuous inner bore completely therethrough of the same diameter as the bore of said outer conductors and providing smooth electrical continuity therebetween.



2,449,984
DIFFERENTIAL FROTH FLOTATION OF SULFIDE ORES
Harold L. Gibbs, Salt Lake City, Utah
Application April 10, 1944, Serial No. 530,389
23 Claims. (Cl. 209—167)

15. In a process of flotation for the separation of metalliferous sulphides, the step of agitating and aerating an aqueous pulp containing said metalliferous sulphides, in the presence of a frothing and a collecting agent for one of the sulphides and, further, in the presence of alpha

mercapto butyric acid (HSC_3H_6COOH) as a depressant.



2,449,985
RECEIVER FOR PULSE WAVES
Paul F. M. Gloess, Paris, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 30, 1941, Serial No. 417,181
In France April 27, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires April 27, 1960
3 Claims. (Cl. 250—20)

1. A radio receiving system for receiving regularly spaced impulses after reflection from a distant object and comparing said received impulses with a reference impulse having the same cadence as said regularly spaced impulses, comprising means for broadening said reference impulses, combining means for combining said broadened impulses and received impulses to produce resultant control impulses, and means for applying said resultant control impulses to said receiver to render it sensitive to receive signals during the desired intervals, whereby undesired reflected signals and interference is substantially reduced.

2,449,986
MANUFACTURE OF DRY CONTACT RECTIFIERS
Bertram Barnett Grace, Leslie James Ellison, Hugh Spence Leman, Charles William Leng, and Arthur Samuel Bridge, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application August 28, 1943, Serial No. 500,438
In Great Britain February 15, 1943
8 Claims. (Cl. 175—366)

1. Apparatus for the electrical treatment of selenium rectifiers comprising a channel for circulation of water, a flat surface for said channel on which the rectifiers are adapted to rest, means for circulating cooling water through said channel, means for holding said rectifiers in good heat conducting relation with the surface of said channel and contact means for connecting each of said rectifiers in series with an individual re-

sistance in parallel to a common source of direct current.

2,449,987
PREPARATION OF SUBSTITUTED ACIDS FROM LACTONES
Thomas L. Gresham, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 5, 1945, Serial No. 620,655
17 Claims. (Cl. 260—454)

8. The method of preparing a beta-substituted propionic acid which comprises bringing together in aqueous solution beta-propiolactone and a water-soluble, ionizable, inorganic salt of a hydracid, and then acidifying the solution.

2,449,988
PREPARATION OF POLYCARBOXYLIC ACIDS
Thomas L. Gresham, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 5, 1945, Serial No. 620,656
6 Claims. (Cl. 260—537)

1. The method of preparing an aliphatic dicarboxylic acid in which the two carboxyl groups are in beta position with respect to one another which comprises bringing together, in solution in a polar solvent selected from the class consisting of water and alcohol, reactants consisting of a water-soluble saturated aliphatic beta-lactone and an inorganic cyanide having the formula MCN wherein M is selected from the class consisting of hydrogen, ammonium and alkali and alkaline earth metals, while maintaining the temperature of the solution between its freezing point and its boiling point to form in solution a beta-cyano carboxylic acid compound, subjecting the solution containing the said compound to hydrolyzing conditions to convert the cyano group to a carboxyl group and then recovering the resulting dicarboxylic acid from the final reaction mixture.

2,449,989
PREPARATION OF BETA-THIO CARBOXYLIC ACIDS
Thomas L. Gresham, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 5, 1945, Serial No. 620,657
6 Claims. (Cl. 260—526)

1. The method of preparing a beta-thio-carboxylic acid compound which comprises reacting

in a polar solvent for the reactants a saturated aliphatic beta-lactone and a water-soluble inorganic sulfide.

2,449,990

BETA-ACYLOXY CARBOXYLIC ACID COMPOUNDS AND METHODS OF PREPARING THE SAME

Thomas L. Gresham and Jacob Eden Jansen, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 5, 1945, Serial No. 620,658
12 Claims. (Cl. 260—488)

1. The method of preparing a salt of a beta-acyloxy carboxylic acid which comprises reacting in a polar solvent for the reactants selected from the class consisting of water and alcohol, a water-soluble unsubstituted saturated aliphatic beta-lactone with a water-soluble salt of a carboxylic acid containing hydrogen atoms present only in hydrocarbon and carboxyl groups.

2,449,991

PREPARATION OF BETA-AROXY CARBOXYLIC ACIDS

Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation c New York

No Drawing. Application October 5, 1945, Serial No. 620,659
18 Claims. (Cl. 260—520)

1. Bis (3-chloro-4-beta-carboxyethoxyphenyl) dimethyl methane.

2. The method which comprises bringing a water-soluble saturated aliphatic beta-lactone into efficient contact with a material of the class consisting of (1) a phenol alone, (2) a solution of a phenol in an inert solvent, and (3) an aqueous solution containing a dissolved water-soluble salt of a phenol, whereby to effect a chemical reaction and then recovering from the reaction mixture a beta-aromatic-oxy carboxylic acid compound formed by the chemical reaction.

2,449,992

PREPARATION OF BETA-THIO CARBOXYLIC ACID COMPOUNDS

Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 5, 1945, Serial No. 620,660
6 Claims. (Cl. 260—516)

1. The method of preparing a beta-thio carboxylic acid which comprises preparing a solution containing a mercaptan consisting exclusively of mercapto structure attached to a hydrocarbon residue, dissolved in an alkaline aqueous solution, admixing the resulting solution with a water-soluble saturated aliphatic beta-lactone while maintaining the temperature in the range of 0 to 50° C., acidifying the solution and recovering the beta-thio carboxylic acid thus formed.

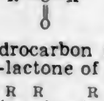
2,449,993

PREPARATION OF BETA-HALO CARBOXYLIC ACIDS

Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

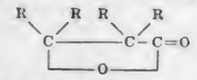
No Drawing. Application October 5, 1945, Serial No. 620,666
3 Claims. (Cl. 260—539)

1. The method of preparing a beta-halo-propionic acid from reactants consisting of beta-propiolactone and a hydrogen halide in which the halogen has an atomic number of 17 to 35 which comprises slowly adding one of the said reactants to a solution of the other of the said reactants in a polar solvent selected from the class consisting of water and glacial acetic acid while agitating the resulting solution and maintaining its temperature at about −25 to +25° C., and then separating a beta-halo-propionic acid in which the halogen has an atomic number of 17 to 35, from the reaction mixture.



2,449,994

BETA ACYLOXY ACYL HALIDES FROM BETA LACTONES



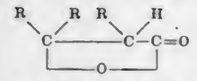
Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application November 28, 1945, Serial No. 631,497
5 Claims. (Cl. 260—488)

1. The method of preparing a beta-acyloxy acyl halide which comprises reacting an acid halide of the structure

wherein R' is a hydrocarbon radical and X is halogen with a beta-lactone of the structure

wherein each R is a member of the class consisting of hydrogen and alkyl, cyclo-alkyl, aryl and aralkyl hydrocarbon radicals.



2,449,995

PREPARATION OF ESTERS OF ALPHA BETA UNSATURATED CARBOXYLIC ACIDS

Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application November 28, 1945, Serial No. 631,498
5 Claims. (Cl. 260—486)

1. The method of preparing an alkyl ester of an alpha-beta unsaturated carboxylic acid which comprises bringing a dialkyl sulfate in which the two alkyl groups are identical and contain from 1 to 8 carbon atoms, and a beta-lactone of the formula

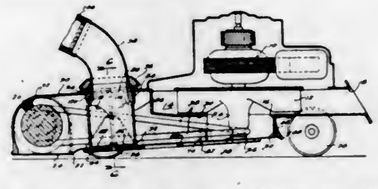
wherein each R is a member of the class consisting of hydrogen and alkyl, cyclo-alkyl, aryl and aralkyl hydrocarbon radicals containing less than 8 carbon atoms, into reactive contact with one another at a temperature below about 30° C. and then distilling the reaction mixture.

2,449,996

PREPARATION OF SULFUR CONTAINING DICARBOXYLIC ACIDS

Thomas L. Gresham and Forrest W. Shaver, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application November 28, 1945, Serial No. 631,499
2 Claims. (Cl. 260—537)



1. The method of preparing beta-thio dipropionic acid which comprises reacting thiohydracrylic acid and beta-propiolactone in aqueous solution in the presence of an alkali metal hydroxide, and then acidifying the solution.

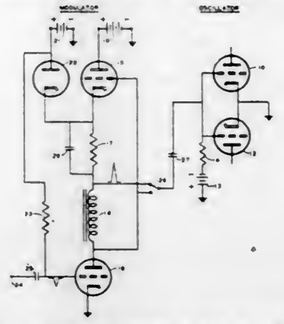
2,449,997

CONVERTIBLE SUCTION CLEANER WITH AGITATOR DRIVE DISENGAGING MEANS

Paul T. Hahn and George R. Coss, Detroit, Mich., assignors to Eureka Williams Corporation, a corporation of Michigan

Application May 3, 1943, Serial No. 485,536
8 Claims. (Cl. 15—9)

1. A vacuum cleaner comprising an electric motor having a vertical shaft, a fan arranged below said motor and connected to said shaft to be driven thereby, said fan being provided with an air inlet on the under side thereof, a nozzle having a downwardly presented mouth and an agitator operatively associated therewith, a belt forming a driving connection between said shaft and said agitator for driving the latter during operation of the fan, a communication forming an air passageway between said nozzle and said fan inlet for inducing a flow of air into said nozzle during operation of said fan, said belt extending through said passageway, said communication being provided with an upwardly facing air inlet port at the front of said cleaner and which port is normally closed, a converter coupling comprising a hollow unobstructed air conducting member adapted to be removably connected with said port when the same is open, said air conducting member when connected to said port having the end thereof arranged to project into said passageway and seat on the wall thereof opposite said port, said end having provision for accommodating the strands of said belt and conforming to the cross section of said passageway and cooperating with the walls thereof to obstruct said passageway so as to prevent the flow of air from said nozzle to said fan inlet during operation of said fan, said air conducting member when connected to said port being adapted to communicate with said fan inlet through said passageway, and means assembled to said cleaner independently of said converter coupling and cooperable with said belt to disengage the same from said shaft for rendering the driving connection inoperative, said converter having a shiftable part cooperable with said means for operating the same to disengage and engage said belt when said converter is connected to said port.



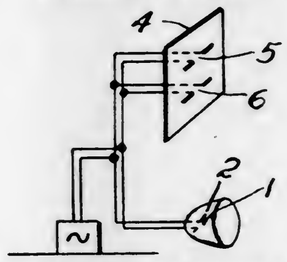
2,449,998

MODULATOR CIRCUIT

John C. Hansen, Avon, N. J.

Application July 22, 1943, Serial No. 495,717
5 Claims. (Cl. 250—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A network comprising a first grid-controlled electron tube and means in its grid circuit to vary the impedance thereof, a second grid-controlled electron tube, a first circuit including a source of potential, the anode-cathode path of said second grid-controlled electron tube, a choke, and the anode-cathode path of said first tube, all connected in a closed series circuit in the order named, a second circuit exclusive of said second electron tube and including a source of



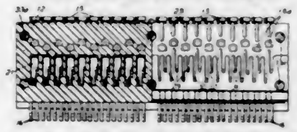
potential, said choke, and said anode-cathode path of said first tube, all in a closed series circuit in the order named, a connection from the anode of said first tube to the grid of said second tube, and an output circuit coupled to a terminal of said choke.

2,449,999

ANTENNA SYSTEM FOR DEFINING GLIDE PATHS

Louis John Heaton-Armstrong, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company

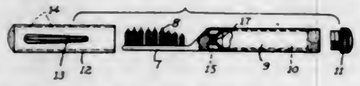
Application October 15, 1943, Serial No. 506,300
In Great Britain October 30, 1942
6 Claims. (Cl. 343—108)



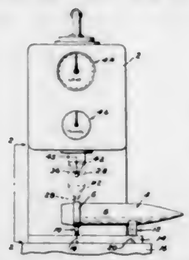
1. An antenna system for defining a glide path resulting from the over-lapping of two field patterns in a vertical plane, said antenna comprising a first dipole antenna, a parabolic reflector for said first antenna to provide a first antenna system having a vertical radiation pattern with a single principal lobe, a second dipole antenna disposed above said first, a third dipole antenna disposed above said second, plane reflecting means for said second and third antennas to provide a multi-lobe vertical pattern, said principal lobe overlapping the lower-most lobe of said multi-lobe pattern, means for feeding said second and third antennas in phase with each other, said second and third antennas together forming a composite antenna system having a mean height above ground and having a separation between the second and third antennas of the order of one-half of the mean height above ground whereby the lobes due to the composite antenna system overlapped by the principal lobe of the first antenna system are substantially reduced.

2,450,000
EMULSION POLYMERIZATION OF METHYL METHACRYLATE
Benjamin W. Howk, Wilmington, and Frederick L. Johnston, Claymont, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 20, 1943, Serial No. 479,894
6 Claims. (Cl. 260—83)

1. Process which comprises forming an aqueous dispersion comprising, as the sole polymerizable component thereof, methyl methacrylate and up to 10%, by weight of the mixture therewith, of a vinyl compound from the group consisting of methyl acrylate, ethyl acrylate, styrene, and vinyl acetate, and 0.01%–1.0%, by weight of said methyl methacrylate, of a thiol from the group consisting of alkane and hydroxyalkane thiols, and maintaining the dispersion thus formed at a temperature of at least 100° C. under autogenous pressure until said polymerizable component is polymerized.



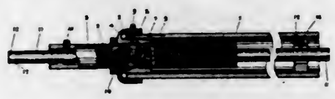
2,450,001
CROSS CONNECTION STRIP AS USED IN TELEPHONE AND LIKE SYSTEMS
Arthur James Humphries, Harrogate, England, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 9, 1946, Serial No. 668,354
In Great Britain October 18, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 18, 1964
3 Claims. (Cl. 173—324)



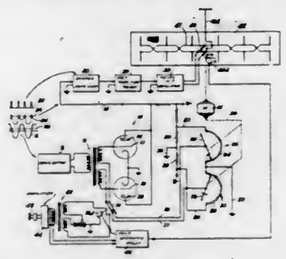
1. In a strip for cross connecting the wires of two cables, two parallel terminal blocks of insulating material each having a front, a back, a top and a bottom, a plurality of groups of tags projecting through the bottoms of the two terminal blocks and to which groups of wires of the two cables may be attached, each tag having a contact surface within a recess in the corresponding terminal block, each recess being open to the back of its block and having a shelf for each contact surface, a pressure block of insulating material within each recess, movably positioned between and separating the shelves and the contact surfaces lying thereon, each pressure block having a ledge for engaging each contact surface, each cooperating ledge and contact surface being aligned with a perforation in the front of the terminal block through which wires may be pushed from the front of one terminal block to the aligned perforation in the front of the other block, each wire passing between contact surfaces and the cooperating ledges, and means projecting through the tops of the terminal blocks, one for each pressure block to force it towards the cooperating contact surfaces.

2,450,002
POCKET TOOTHBRUSH
Theodore F. Jackson, Rockford, Ill., assignor, by direct and mesne assignments, of one-half to Walter B. Keres, Rockford, Ill.
Application August 12, 1946, Serial No. 690,036
9 Claims. (Cl. 132—84.2)

1. A toothbrush comprising a body providing a head portion having bristles projecting therefrom, and an elongated tubular handle portion extending from and rigid with the head portion, said handle portion being open at its outer end and closed at its inner end and having a substantially conical projection in that end, an elongated cartridge adapted to contain a dentifrice and having a dispensing opening in one end, the cartridge being slidable endwise in and removable endwise from the handle and disposed in said handle portion with the projection entered in and closing the dispensing opening, and means threaded on the open end of the handle against the end of the cartridge to retain said cartridge in said handle and cause the projection to be entered tightly in the dispensing opening.



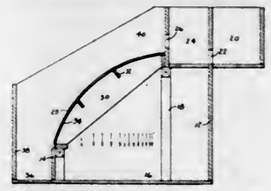
2,450,003
ROTATING BAND TESTER
Paul W. Klipsch, Hope, Ark.
Application July 23, 1945, Serial No. 606,697
3 Claims. (Cl. 73—167)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. A device for measuring the extent of looseness between a rotating band and its seat on a shell body carrying the band, comprising a support platform, an upstanding V-block and an upstanding lower indenting member on said platform and spaced from said V-block, said V-block and indenting member being constructed and arranged for supporting a shell in horizontal position with the rotating band of the shell resting on said indenting member, an upper indenting member supported above said rotating band and in vertical alignment with said lower indenting member, means constructed and arranged for moving said upper indenting member vertically downward into contact with said rotating band at a location which is 180 degrees angularly displaced from the location of contact of the rotating band with said lower indenting member, press means constructed and arranged for thereupon continuing the said downward motion of said upper indenting member whereby said indenting members are caused to depress said rotating band surface sufficiently to press the underlying portions of the rotating band into tight engagement with its seat on the shell body, means constructed and arranged for measuring the pressure exerted by said press means on said upper indenting member, and means constructed and arranged for measuring the depth by which said indenting members have thus depressed the rotating band surfaces, said upper and lower indenting members comprising projecting columns substantially square and relatively small in cross-section, their contact faces being curved to the same curvature as the surfaces of the rotating band.

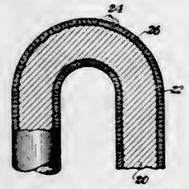
2,450,004
LATHE SPINDLE STOP
Graham Knox, San Francisco, Calif.
Application July 21, 1945, Serial No. 606,462
2 Claims. (Cl. 82—34)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A lathe spindle stop comprising a collar having inner and outer spaced concentric flanges, the space between the flanges being adapted to receive an end of a hollow lathe spindle, means for securing the collar to the spindle, said inner flange being interiorly threaded, a bushing exteriorly threaded for at least a portion of its length threadedly engaged with the threads on said inner flange for longitudinal adjustment with respect thereto, an elongated stop rod slidably fitted within said bushing for longitudinal adjustment therein, and means to secure said stop rod in adjusted position with respect to said bushing, an end of said stop rod being adapted to abut against pieces of material on which machine work is to be performed by the lathe.



2,450,005
OMNIDIRECTIONAL RADIO BEACON
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 26, 1944, Serial No. 532,724
25 Claims. (Cl. 343—106)

1. An angularly shiftable radio beacon system, comprising radiator means for providing a shiftable directional radiation pattern, means for applying trains of pulses of radio frequency energy to said radiator to provide radiated signals for said radiation pattern, and means operative synchronously with the directive shifting of said directional radiation pattern for controlling the spacing of the pulses of said trains in accordance with the angular position of said pattern.

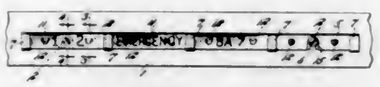


2. A beacon system according to claim 1, further comprising receiver means for receiving the radiated signals of said radiation pattern, and indicator means responsive to the spacing of the pulses of said received signals for indicating the position of said receiver means relative to said radiator.

2,450,006
THICKENER
Frank G. Lesniak, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a corporation of Delaware
Application August 14, 1943, Serial No. 498,907
2 Claims. (Cl. 210—149)

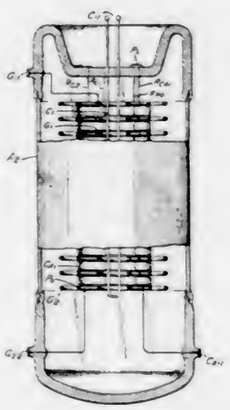
1. Apparatus for reducing the water content of watery fibrous stock, which comprises the combination of a supply means for the stock, removal means for removing stock with reduced water content at a level lower than the level of the supply means, and a fixed convex screen in front of the supply means and inclined forwardly and downwardly therefrom to the removal means, the contour of the screen being such as to cause the stock to move over the surface of the screen by its own inertia toward the stock removal means, first moving relatively slowly over a relatively horizontal screen area near the upper part of the screen when containing the highest percentage of water, and then moving with increased speed over a more inclined screen area as it approaches the stock removal means when containing a reduced portion of water, whereby to cause water to separate from the stock and pass through the screen, and to avoid, through the increased speed attained, the jamming up of the stock near the bottom of the screen.

2,450,007
CARBURIZED FILAMENT AND METHOD FOR TREATING THE SAME
Charles V. Litton, Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application November 23, 1942, Serial No. 466,567
1 Claim. (Cl. 250—27.5)



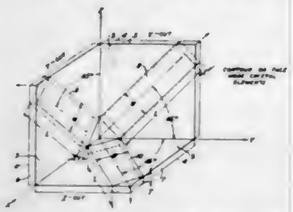
A wire for mounting in an electronic discharge device consisting of a tungsten-containing core surrounded by an outer layer of thoriated tungsten carbide having a crazed surface and no connection other than surface contact connection with said core.

2,450,008
COOPERATING CARD ENVELOPE AND A CARD HOLDER WITH DETENT RETAINING MEANS
Carl Lomholt, Bogota, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 18, 1945, Serial No. 600,039
10 Claims. (Cl. 40—10)



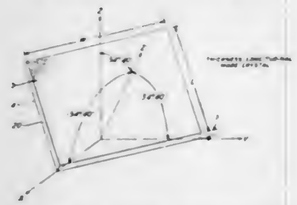
10. A designation strip assembly comprising a holder member formed of sheet metal bent upon

itself along a longitudinal line providing a channel section having spaced inner and outer walls united by an upwardly positioned return bend and having its inner wall formed with lower edge opening slots for the reception of securing screws and the outer wall having integral tongues on its lower edge spaced at regular intervals and outwardly and upwardly turned to provide stop and guide supports open at the top for the reception



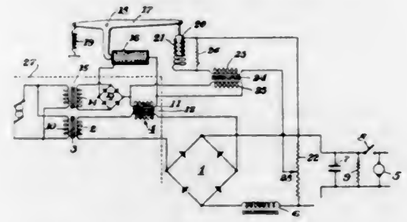
of separable card members, and separable designation card assemblies fitted to the guide supports and consisting of a card and an envelope therefor of sheet cellulose acetate folded on a longitudinal line and positioned with its fold uppermost, said envelope having longitudinally aligned apertures in each end portion and said holder member outer wall having outwardly pressed shoulder portions formed with an upwardly positioned curved junction and positioned to register with the apertures.

2,450,009
MULTIPLE STAGE THERMIONIC VALVE
Alan Julian Maddock, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application May 13, 1943, Serial No. 486,897
In Great Britain May 22, 1942
6 Claims. (Cl. 250—27.5)



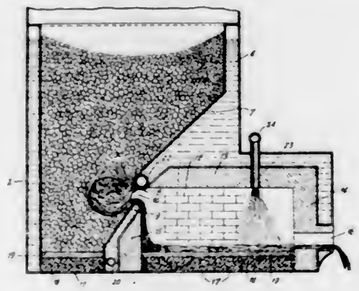
1. A thermionic valve device including a cathode, a cathanode spaced from said cathode and comprising a plurality of spaced cathanode surfaces of discrete dimensions, a first grid electrode mounted between said cathanode and said cathode, the conductors of said grid electrode being positioned in line with the apertures between said cathanode surfaces, an anode spaced from said cathanode surfaces on the side thereof remote from said cathode, and a second grid electrode mounted intermediate said cathanode and said anode.

2,450,010
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 9, 1943, Serial No. 497,883
9 Claims. (Cl. 171—327)



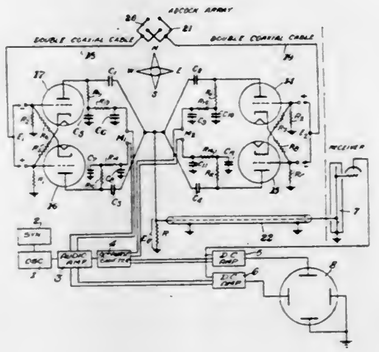
1. Piezoelectric crystal apparatus comprising an ammonium dihydrogen phosphate piezoelectric crystal body adapted for longitudinal lengthwise motion at a frequency dependent mainly upon the value of the longest or length axis dimension thereof, said value of said elongated length axis dimension corresponding to the value of said frequency, said crystal body having substantially rectangular shaped major faces, the width axis dimension of said major faces being substantially perpendicular to said length axis dimension thereof, and the ratio of said width axis dimension with respect to said length axis dimension being a value less than 0.6, said major faces being disposed substantially perpendicular to the Z axis of the three mutually perpendicular X, Y and Z axes, and said length axis dimension being inclined at an orientation angle of substantially 45 degrees with respect to said X and Y axes, said orientation angle being a value corresponding to the maximum value of piezoelectric constant for said longitudinal mode of motion, to the maximum value of said motion along said length axis dimension, and substantially to zero value of coupling of said desired longitudinal motion with the undesired face shear mode of motion in said crystal body.

2,450,011
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 24, 1945, Serial No. 637,126
18 Claims. (Cl. 171—327)



1. A piezoelectric crystal element adapted for longitudinal motion along its thickness dimension which is normal to its major faces, and comprising one of the substances ammonium dihydrogen phosphate and potassium dihydrogen phosphate, said crystal element having said normal to said major faces inclined at substantially equal angles with respect to all three of the mutually perpendicular X, Y and Z axes thereof.

2,450,012
VOLTAGE REGULATOR
Warren S. Master, Rutherford, N. J., and Edmund Engelman, Elmhurst, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 30, 1944, Serial No. 556,584
4 Claims. (Cl. 175—363)

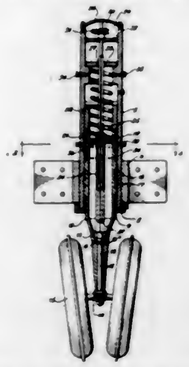


1. A self-regulating rectifying system for converting alternating current into direct current, comprising a rectifier having an alternating current input circuit and a direct current output circuit, a power source connected to said input circuit, a saturable core reactor in said input circuit, and regulating means for increasing or reducing the reactance of said reactor in accordance with the rise or fall respectively of the potential across said output circuit, said regulating means comprising a saturating winding on said core, a variable resistor and a current supply, all connected in series, means for varying the resistance of said resistor in response to potential variations of said output circuit, whereby the direct current potential of said output circuit remains substantially constant, said last means comprising a voltage responsive coil and a potential divider connected across said output circuit, and an accelerating means, said accelerating means comprising a transformer having primary and secondary windings, said primary winding being connected in series with said voltage responsive coil and said potential divider, and said secondary coil being connected across said saturating winding.

2,450,013
APPARATUS FOR PRODUCING ROCK WOOL
Oliver J. Nelson, Parsons, Kans., assignor to himself as trustee
Application May 5, 1943, Serial No. 485,715
15 Claims. (Cl. 263—27)

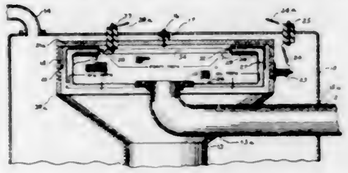
5. A cupola for fusing material having an opening for the discharge of fused material, said opening being formed by an upper wall or arch spaced above a bottom wall or weir, the interior side of the upper wall being inclined upwardly and outwardly from the opening, the interior side of the lower wall being inclined inwardly and downwardly from the opening, and a burner in the cupola at the opening, so positioned and directed that the area across, above, below, and directly to the rear of the opening is a melting zone subjected to heat sufficiently high to readily fuse the material, the opening being of a height above a floor outside the cupola sufficiently greater than the depth of the melting zone below the opening that the flow of viscous molten material in passing through the opening and falling to said floor will drag the molten material from the bottom of the melting zone.

2,450,014
ELECTRONIC GONIOMETER FOR RADIO DIRECTION FINDERS
John H. Newitt, Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 28, 1944, Serial No. 560,823
13 Claims. (Cl. 343—121)



1. In combination, an electronic goniometer divided into two sections comprising electric discharge devices, a directional antenna connected with each section, a source of sinusoidally varying modulating voltages applied out of phase to the two sections, an output load in which the phase and amplitude of the signals applied to the two sections is compared, and an indicator comprising a sine wave generator controlling said source of modulating voltages.

2,450,015
STEERABLE WHEEL SHOCK ABSORBER
Norman N. O. Odegaard, McHenry, N. Dak.
Application November 14, 1946, Serial No. 709,760
1 Claim. (Cl. 280—92)



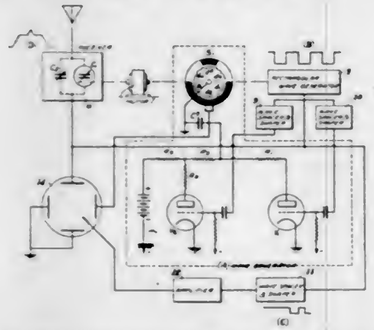
In combination, a shock absorber including a vertical cylinder, a hollow spring biased piston working in the cylinder, a wheel mounting extending downwardly at the lower end of the piston, a vertical steering rod journalled in the mounting, a wheel spindle carried at the lower end of the rod for horizontal swinging movement to steer a wheel mounted thereon, a sectional telescoping shaft extending upwardly from the rod through the piston, a gear housing in the upper

end of the cylinder, an operating shaft extending outwardly of the housing, and gears in the hous-

ing operatively connecting the upper end of the first named shaft to said second named shaft.

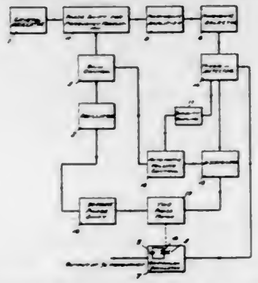
2,450,016
HIGH-VOLTAGE FOAM BREAKER
Isadore Irving Pinkel, Cleveland, Ohio
Application October 12, 1944, Serial No. 558,445
4 Claims. (Cl. 204—302)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. In an apparatus for releasing gases entrained as foams in liquids, the combination comprising: a tank, a pair of electrodes mounted within said tank and having their surfaces uniformly spaced apart to form a foam flow passage therebetween; a porous member within said tank and adjacent said electrodes; an electrical conductor connected to each of said electrodes and adapted to be connected to a source of high potential electrical energy for impressing a large difference of potential across said electrodes; an inlet conduit adjacent said porous member positioned to direct foam carrying liquid to said member to permit the portion of the incoming liquid which is free of foam to pass through said member and the remaining foam to flow into said passage wherein the gas entrained therein will be released; and means for receiving said portion of the liquid and the liquid from which gases entrained therein have been released.



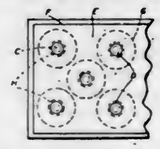
2,450,017
METHOD OF PRODUCING ANIMATED CARTOONS
Robert Place, Glen Cove, N. Y., assignor to Place Process, Inc., Washington, D. C.
Application June 8, 1944, Serial No. 539,245
18 Claims. (Cl. 88—16)

1. The method of producing animated cartoons from a series of cartoon drawings which comprises, photographically producing images of said series of drawings on successive areas of a transparent strip, opaquing the image bearing face of the strip within outlines of the images in vary-



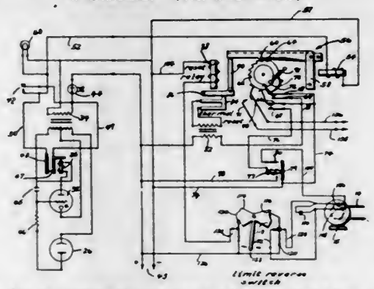
ing tones to complete the cartoon images, and photographing the series of completed images on successive frames of a sensitized film.

2,450,018
RADIO MONITORING SYSTEM
Albert Preisman, Flushing, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application May 7, 1943, Serial No. 485,970
6 Claims. (Cl. 250—20)



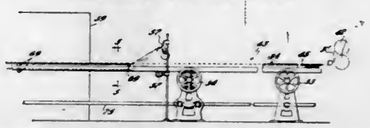
4. A radio receiving system comprising a radio receiver, a mechanically-rotated scanning condenser in said receiver, said scanning condenser having a stator combined with a rotor plate formed of two segments of less than 90° each, separated on one side by a cut-out portion extending over an angle of approximately 180° and on the other side by a cut-out portion extending over an angle of substantially less than 180°, so that rotation of the rotor will cause the capacity of said scanning condenser, and consequently the frequency received by said radio receiver, to remain substantially constant during the time that both cut-out portions are simultaneously respectively entering and leaving the stator, an oscilloscope, means for delivering the output of said receiver to one set of deflection plates of the oscilloscope, a resistance condenser circuit connected to a second set of deflection plates of the oscilloscope, a source of power for the resistance condenser circuit, mechanically controlled switching means for controlling the charging and discharging of the condenser of said resistance condenser circuit to derive therefrom a voltage wave for application to the said second set of deflection plates of the oscilloscope, said switching means comprising a fixed contact and a rotating contact of substantially circular form and having two spaced-apart conducting segments of less than 90° each, separated on one side by an insulating segment of approximately 180° and on the other side by an insulating segment of substantially less than 180°, so that rotation of said rotating contact will permit the condenser of said resistance condenser circuit to charge only during the intervals that the said insulating segments of said rotating contact are in contact with said fixed contact, and means for synchronizing the operation of the said mechanically-rotated scanning condenser and the said mechanically-controlled switching means result in a correlation of the voltages delivered to the two sets of plates of the oscilloscope.

2,450,019
FREQUENCY MODULATED OSCILLATOR CONTROL
Richard H. Ranger, United States Army, Newark, N. J.
Application July 6, 1944, Serial No. 543,746
10 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



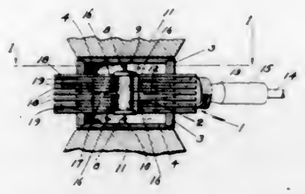
1. A process of controlling the frequency of a high frequency oscillator over a wide range of frequencies, said process comprising, generating a first electrical wave of substantially constant frequency, generating a second electrical wave of substantially constant frequency, shifting the phase of said first wave by modulating the frequency of said first wave by means of said second wave, amplifying and selecting a harmonic of said phase-shifted wave, generating a third electrical wave whose frequency is to be controlled, mixing said amplified and selected harmonic with said third wave and thus detecting a primary beat note of variable frequency, converting the primary beat note into a secondary beat note of the same frequency as the second wave, and combining energy from the secondary beat note and from the second wave in phase quadrature to each other to provide control energy to cause the frequency of the third wave to be brought to its proper frequency in the event of any variation from such proper frequency.

2,450,020
MANUFACTURE OF RECTIFIER DISKS
Edward Arthur Richards, Leslie James Ellison, and Frank Gray, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 20, 1943, Serial No. 511,103
In Great Britain December 3, 1942
3 Claims. (Cl. 175—366)



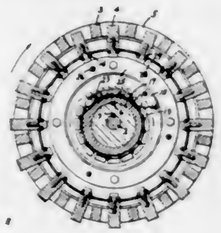
1. A process of manufacturing a plurality of apertured so-called center-contact rectifier elements from a base plate provided with a layer of rectifying material which comprises the following steps: punching out a plurality of holes corresponding to the holes in the elements to be made, applying insulating material to the layer of rectifying material to cover a small area around each hole, inserting self-centering masks in these holes, spraying the base plate with a conducting layer forming the counter-electrode, covering the masks and the exposed surface of the rectifying layer.

2,450,021
AUTOMATIC DOOR OPERATOR
Cyrus T. Schirmer, Wayland, and Max Knobel, Arlington, Mass., assignors, by mesne assignments, to Redmond Company, Inc., a corporation of Michigan
Application August 27, 1945, Serial No. 612,924
6 Claims. (Cl. 318—452)



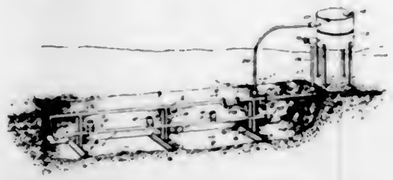
6. An automatic garage door operator comprising a phototube adapted to be activated by the headlight of an automobile, a step relay operable upon each activation of the tube, reset means for restoring the step relay, timing means for operating the reset means a predetermined time after operation of the step relay, motor control contacts operable on a selected number of steps of the relay, an optical system for the phototube including a lens, and a field-limiting diaphragm in the neighborhood of the focal plane of the lens, the phototube being disposed in back of the diaphragm to receive diffuse light passed therethrough.

2,450,022
CLOTH FINISHING
George A. Schreiner, Troy, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a corporation of New York
Application August 3, 1946, Serial No. 688,239
7 Claims. (Cl. 26—18.6)



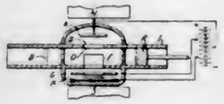
1. Apparatus for finishing fabrics comprising in combination mechanism for compressively shrinking the fabric in length, a tenter arranged to receive the fabric shrunk by the compressive shrinking mechanism, the tenter including means for moistening and drying the fabric, a set of nipping rolls adapted to receive the fabric passing from the compressive shrinking mechanism to the tenter, and means for varying the ratio between the speeds of the tenter and the said set of nipping rolls on the one hand and the compressive shrinking mechanism on the other hand.

2,450,023
ELECTRON DISCHARGE DEVICE OF THE MAGNETRON TYPE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 15, 1943, Serial No. 510,423
3 Claims. (Cl. 315—39)



1. An electron discharge device comprising a cathode; and an anode structure spaced from said cathode; said anode structure including a pair of arm members which, together with that portion of said anode structure lying therebetween, define a cavity resonator; each of said arm members being centrally slotted in a plane perpendicular to the axis of said cathode, and thereby forming a single pair of capacity-coupled arm elements of equal lengths; all of said arm elements presenting electron-receiving faces of equal lengths to said cathode.

2,450,024
THREAD ADVANCING REEL
Richard W. Stanley, Drexel Hill, Pa., and Carl A. Castellan, Wilmington, Del., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application September 24, 1946, Serial No. 698,918
6 Claims. (Cl. 28—71.7)



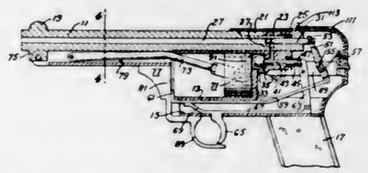
1. A thread-advancing reel comprising a set of spaced bars rotatable about an axis, a second set of spaced bars interdigitating with the bars of the first set, means for supporting the second set of bars rotatably on an axis of rotation eccentric to that of the first set, each of the bars of the second set being mounted on the supporting means pivotally on a single axis transverse of the axis of rotation of the second set of bars, a fixed cam comprising an actuating surface having a gradual rise through an arc greater than 90° followed by a drop through an arc of less than 90° and then followed by a dwell between the drop and the rise, said cam being spaced axially of the reel from the plane of the pivotal axes of the bars of the second set, and means for rotating the bars whereby the bars of the second set are rocked about their pivotal axes by said fixed cam.

2,450,025
GASOLINE FIELD STOVE
Leander J. Stein, United States Army, Sheboygan, Wis.
Application January 4, 1945, Serial No. 571,343
3 Claims. (Cl. 158—63)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A demountable vapor-burner stove comprising an elongated horizontal burner tube, an elongated horizontal generator tube laterally above and communicating with said burner tube, at least one burner jet in said burner tube in heat exchange relation to said generator tube, the vertical axis of said jet being lateral of said generator tube, a plurality of upright standards, the upper end of each of said standards providing underneath support for seating said generator tube, and the vertical edge of each of said standards having means for holding said tubes against lateral displacement, said tubes being disengageable from said standards by lifting.

2,450,026
THERMIONIC DEVICE FOR USE WITH WAVE GUIDES
Stanley Gordon Tomlin, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application October 14, 1942, Serial No. 462,027
In Great Britain August 29, 1941
8 Claims. (Cl. 250—27)

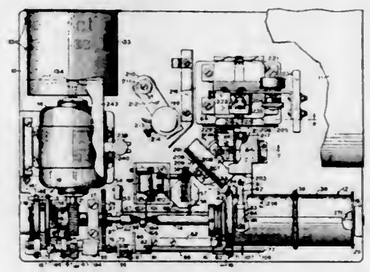
1. Electron discharge apparatus for use with dielectric wave guides comprising a length of the wave guide open at one end a source of electromagnetic waves coupled to said open end, a reflector acting as a closure at the other end, means for producing standing waves in said guide, means for producing and directing a beam of electrons transversely across the guide at a point along the guide where a field antinode exists and where the direction of the electron beam is parallel to the electric field lines of force of the electromagnetic waves whereby the electrons in said beam are velocity modulated by said field and bunched in their passage across the guide there being openings transversely through said guide for the passage of said beam, means for bringing electrostatic charges to bear on said beam after passage through the guide and means to limit the space across said guide to at least one gap within which the electrons react with said field, so that the transit time of electrons crossing said gap is small compared with the period of oscillations.



2,450,027
DIMERIZATION OF ALPHA-ALKYL PARA-ALKYL STYRENES
Arthur J. Warner, South Orange, and Theodore H. Talbot, East Orange, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 21, 1943, Serial No. 515,168
8 Claims. (Cl. 260—669)

1. The method of making substantially pure dimers of alpha-alkyl para-alkyl styrenes which comprises the steps of mixing a monomeric alpha-alkyl para-alkyl styrene having not more than five carbon atoms in either the alpha or the para substituents at temperatures in the range between 60° C. and the boiling point of the monomer, with between ½% and 10% by weight of previously activated fuller's earth, said fuller's earth having been activated by heating at temperatures between 200° C. and 400° C., maintaining the mixture within said temperature range until the refractive index is substantially stabilized, removing the fuller's earth and separating the dimer from the remaining constituents.

2,450,028
DIMETHYL STYRENE POLYMERIZATION PRODUCTS AND THEIR PREPARATION
Karl H. Weber, Lancaster, and Paul O. Powers, Manheim Township, Lancaster County, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
No Drawing. Application October 12, 1942, Serial No. 461,782
3 Claims. (Cl. 260—86.5)

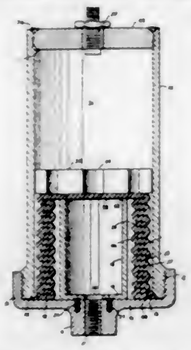


1. A rubber-like material comprising the emulsion polymerization product of about 35 parts by weight of para-methyl-alpha-methylstyrene and about 65 parts by weight of butadiene 1,3.

2,450,029
COMPRESSED AIR GUN
William S. Wells, Palo Alto, Calif., assignor to Paul S. Linforth, San Francisco, Calif.
Application September 23, 1941, Serial No. 411,989
5 Claims. (Cl. 124—13)

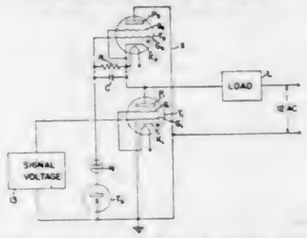
1. A compressed air gun comprising a barrel, a pump associated therewith including a cylinder having an open end and supported adjacent said barrel with its closed end toward the breech end of the gun, a lever pivoted adjacent the muzzle end of said barrel, said lever in one extreme position of swing having a portion disposed substantially parallel to said barrel and an angularly disposed portion extending across the open end of said cylinder, a piston in said cylinder having its working surface facing the closed end of said cylinder, a piston rod connected at one end to said piston and at its other end to an intermediate point on said lever lying just slightly beyond a line joining the pivot axis of said lever and the piston rod connection to said piston, in the direction of said barrel, when said piston is at the end of its compression stroke, a slidable breech pin normally held at the firing position of a shot in said barrel, and adapted to be withdrawn sufficiently to expose the interior of said barrel to a feed opening, and means connected to said breech pin and extending between the open end of said cylinder and said lever, in the path of movement of said piston on its intake stroke for effecting such withdrawal of the breech pin to automatically load said gun during the operation of said pump.

2,450,030
FACSIMILE TELEGRAPH SYSTEM AND APPARATUS
Raleigh J. Wise, Dunellen, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application May 5, 1942, Serial No. 441,764
14 Claims. (Cl. 178—6.6)



1. In a facsimile telegraph system, a plurality of facsimile machines interconnected for facsimile communication, each having a scanner comprising a rotary member having an area to be scanned and a device to traverse said area by closely spaced excursions representing scanning lines, power-driven means for causing relative movement between said member and said device at said machines, a connection operative to produce said relative movement comprising a power transmission means of the positive connection type, frictionally urged control means for controlling operation of said positive power transmission means, and means for releasing said control means at one of said machines when the rotary member at another machine is in a predetermined angular position.

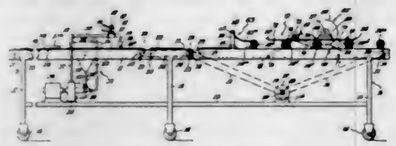
2,450,031
ACCUMULATOR
Alexandre Berger, New York, N. Y., assignor to Aircraft Hydraulics, Inc., a corporation of New York
Application January 30, 1945, Serial No. 575,330
11 Claims. (Cl. 138—31)



1. In an accumulator, a closed cylinder adapted to have its closed end connected to a source of fluid medium under pressure and having a cylinder head detachably secured to its other end and adapted to be connected to a different source of fluid under pressure, a piston in said cylinder having clearance passages formed therein, and an elongated expansible and contractible nonmetallic member having one end flanged and secured in fluid tight relation between said other end of said cylinder and said cylinder head, the other end of said expansible and contractible member being closed and formed integral there-

with, said closed end of said member being secured to and guided by said piston, said expansible and contractible member having its exterior

subjected to the pressure of fluid from said first mentioned source and having its interior subjected to fluid pressure from said second mentioned source.

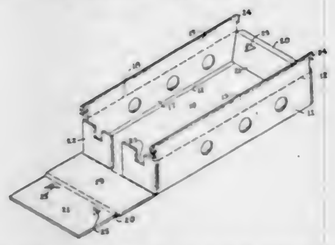


2,450,032
REVERSELY-CONNECTED ELECTRIC DISCHARGE DEVICE SYSTEM
Arthur F. Cann, Danvers, Mass., assignor to Browning Laboratories, Inc., Winchester, Mass.
Application February 4, 1943, Serial No. 474,669
2 Claims. (Cl. 250—27)

1. In combination with an alternating current power source and a load, an electrical control circuit for controlling the power applied to the load comprising two gaseous discharge control tubes reversely connected between the power source through the load, each of said control tubes having a cathode and a control grid, signal means connected to one of said control grids for controlling the discharge of the one tube, a rectifier circuit connected between the cathodes of the tubes and means included in said rectifier circuit for applying periodically a gradually decaying potential to the grid of the other tube for controlling the initiation of the discharge across said tube and a neon tube in series in said rectifier circuit for opening the circuit when the potential has dropped below a given desired value.

2,450,033
MEANS FOR MAKING JELLY ROLLS OR THE LIKE
Morris Cohen, Kansas City, Mo., assignor to Interstate Bakeries Corporation, Kansas City, Mo., a corporation of Delaware
Application March 24, 1945, Serial No. 584,545
2 Claims. (Cl. 107—4)

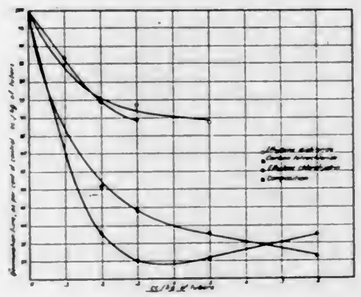
1. In a jelly roll machine the combination of, an endless belt conveyor to receive a series of cake slabs in abutting edge to edge relation, jelly depositing means suspended over said conveyor including mechanism for effecting discharge of jelly onto the slabs continuously while the conveyor is in motion and the slabs are in abutting relation, another conveyor in end to end adjacent relation with the first mentioned conveyor to receive the slabs successively from the first mentioned conveyor after the jelly is deposited thereon, means for causing the second mentioned conveyor to space the slabs apart, and a flexible apron having one end suspended over the machine at



a place and arranged to be engaged by the slabs after the latter are spaced apart by the said second mentioned conveyor, the other end of said apron being free and dragging on the conveyor and the transverse edges of the slabs being spaced apart by said second mentioned conveyor a sufficient distance to permit the free end of the flexible apron to fall between said transverse edges successively, whereby the leading transverse edge of each slab is picked up by the apron and under the influence of movement of the conveyor the slab is rolled up with the jelly between the convolutions of the roll.

2,450,034
GROUNDWOOD BLEACHING BY HYDROSULFITE
Howard J. Cronin, Glens Falls, N. Y., assignor to International Paper Company, New York, N. Y., a corporation of New York
No Drawing. Application December 1, 1943, Serial No. 512,475
4 Claims. (Cl. 8—104)

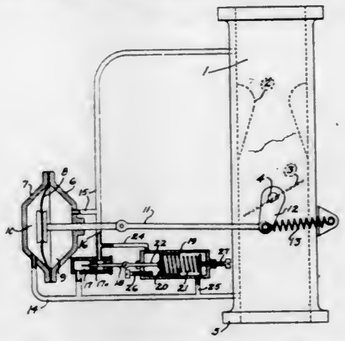
1. A method of bleaching an aqueous suspension of groundwood pulp comprising: adding zinc hydrosulphite in an amount equal to 1% of the dry weight of pulp; mixing said zinc hydrosulphite with said suspension with a minimum of agitation and thereafter maintaining said mixture quiescent for not less than three hours.



2,450,035
BOX
Stanley B. De Mian, Chicago, Ill., assignor to International Paper Company, New York, N. Y., a corporation of New York
Application November 23, 1945, Serial No. 630,163
5 Claims. (Cl. 229—34)

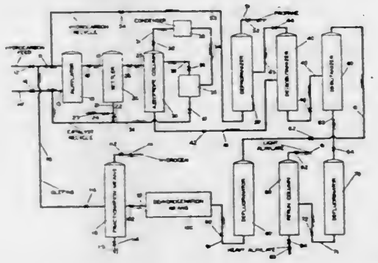
5. A box formed from a single blank of paperboard or the like, comprising a bottom, side walls,

and double-ply end walls, all of said walls being folded upwardly from said bottom, means for spacing the plies of said end walls, each of said side walls including an outer wall panel, a flange connected thereto and extending inwardly from the top thereof, a panel dependent from the inner edge of said flange and folded back under said flange at an angle thereto, and an inner wall panel dependent from said angularly positioned panel and extending into proximity to said bottom, said flange and angular panel together being provided with means projecting at each end beyond said outer and inner wall panels and engageable with said end walls for locking all of said walls in erect position, the inner ply of each of said double-ply end walls being provided with a pair of apertures for receiving said locking means, each aperture having an edge disposed in substantial parallelism with the flange of an associated side wall and an edge disposed in substantial parallelism with the angularly positioned panel whereby upon the receiving of said locking means in said apertures said angularly positioned panels together with their dependent inner wall panels may be flexed outwardly and upwardly from their normal position in an unfilled box to accommodate contents bulking somewhat greater than the volume of the box normally available for filling.



2,450,036
SPROUTING OF BUDS
Frank Earl Denny, Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc., a corporation of New York
Application May 12, 1945, Serial No. 593,521
4 Claims. (Cl. 47—58)

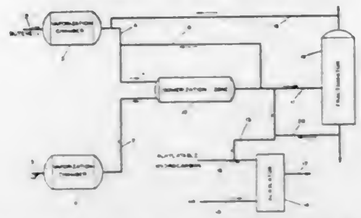
3. The method of hastening the sprouting of buds which comprises treating the buds with a composition comprising ethylene chlorohydrin, ethylene dichloride, and carbon tetrachloride, the said composition being vaporized and the vapors caused to contact the buds.



2,450,037
GOVERNOR
Roger R. Dulong, St. Louis, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Missouri
Application September 23, 1946, Serial No. 698,779
7 Claims. (Cl. 137—153)

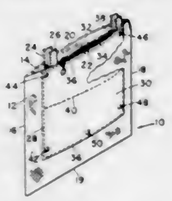
1. In a governor for an internal combustion engine having an intake conduit, a governing valve in said conduit, a device responsive to pressures in said conduit for actuating said valve, means tending to moderate the effect of said device, and means independently responsive to the

intake conduit pressures for adjusting said moderating means.



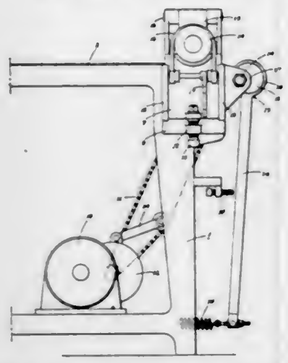
2,450,038
HYDROFLUORIC ACID ALKYLATION PROCESS
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 10, 1943, Serial No. 498,117
13 Claims. (Cl. 260—683.4)

1. A process for the treatment of the hydrocarbon effluent from a hydrofluoric acid alkylation step in which isobutane is alkylated in the presence of normal butane, which comprises subjecting said hydrocarbon effluent to an azeotropic distillation whereby free hydrofluoric acid is removed; fractionating the hydrogen fluoride-free effluent so obtained to separate an isobutane fraction containing organic fluoride impurities, a normal butane fraction containing organic fluoride impurities, and a higher-boiling fraction also containing organic fluoride impurities; recycling said isobutane fraction to said alkylation step; passing said normal butane fraction to a first defluorination means containing aluminum oxide and maintained at a temperature in the range 150–300° F. and effecting therein a removal of fluorine from said fraction; subjecting the defluorinated material so obtained to dehydrogenation; separating from the effluent from said dehydrogenation a mixture comprising propene, butenes, and unreacted butane; passing said mixture to said alkylation step; passing said higher-boiling fraction to a second defluorination means containing aluminum oxide and maintained at a temperature in the range 150–500° F.; passing the substantially fluorine-



free material so obtained to rerun means; and withdrawing from said rerun means a fraction boiling in the motor-fuel range and a fraction boiling above the motor-fuel range.

2,450,039
ISOMERIZATION PROCESS
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application May 12, 1945, Serial No. 593,464
8 Claims. (Cl. 260—683.2)

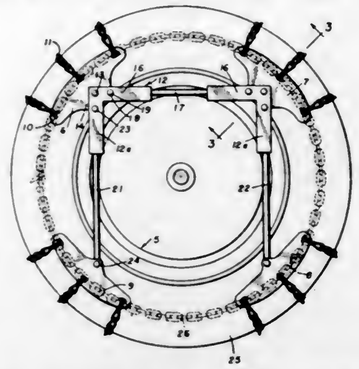


1. A process for the isomerization of butene-1 to butene-2 which comprises introducing butene-1 vapor and anhydrous hydrogen fluoride vapor into an isomerization zone in the ratio of about 5 to 20 mols of butene-1 per mol of hydrogen fluoride, at a temperature of 300 to 1000° F. at a contact time of 5 to 50 minutes to effect substantial conversion of said butene-1 to butene-2 in the absence of substantial polymerization and without substantial change in the carbon skeleton of the butene-1 molecule.

2,450,040
COMBINED SHOPPING BAG AND HANDBAG
William Patrick Gibson, Plainfield, N. J., assignor to Holdall Bag Company, Inc., New York, N. Y.
Application March 5, 1948, Serial No. 13,150
1 Claim. (Cl. 150—1.7)

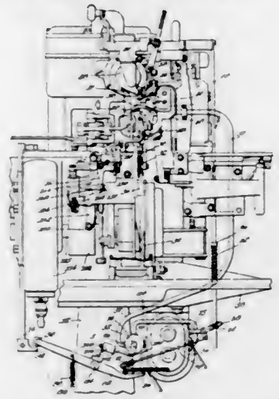
A foldable convertible bag comprising two coextensive side panels joined to one another along the side and bottom edges of the bag, a pair of handles, one associated with each of the upper edges of the side panels, a flexible cover panel superimposed upon one of said side panels, the side edges of said cover panel being disposed between the side edges of the bag and the ends of the handles and the bottom edge of the cover panel being spaced from the bottom edge of the bag, the width of said cover panel being in excess of the width of the folded bag and the height of the cover panel being in excess of twice the height of the folded bag, the upper edge of said cover panel being in registry with the upper edge of the side panel on which it is disposed, said bag being adapted to be folded to a smaller size by folding the side and cover panels first near the bottom and then near the side edges of the cover panel and then by folding the side and cover panels in half parallel to the upper edges of the side panels, means to detachably secure the folded portions of the bag together, stitching to secure the periphery of the cover panel to its associated side panel except between the ends of the handles, and means to detachably attach the remainder of the cover panel to the registered edges of the side panel along their lengths.

2,450,041
SHEET METAL ROLLING MACHINE
Albert L. Groves, Farmington, Calif.
Application March 16, 1946, Serial No. 654,970
3 Claims. (Cl. 153—54)



1. A sheet metal rolling machine comprising an upstanding frame, a work supporting bed on the frame, said bed having a delivery end, a pair of transverse, cooperating rollers, means mounting the rollers on the frame one above the other and directly beyond the delivery end of the bed, said delivery end of the bed being closely adjacent and substantially tangential to the upper roller at the low point thereof, the lower roller being mounted for adjustment to alter the peripheral working point thereof circumferentially of the upper roller on the side of the latter opposite the bed and above said low point, and means operative to drive a roller of the pair in a direction turning away from the bed at such peripheral working point; the lower roller mounting means comprising a pair of upstanding parallel bell crank levers, the lower roller being journaled at its ends on corresponding legs of the bell crank levers, means pivotally mounting said levers intermediate their ends in connection with the frame for swinging lengthwise of the latter and for adjustment in the same direction, and yieldable means connected to the bell crank levers and acting thereon in a direction to urge the lower roller toward the upper roller.

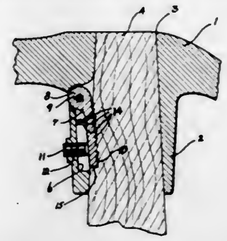
2,450,042
ANTISKID CHAIN
Edwin P. Harold, Menasha, Wis.
Application March 3, 1947, Serial No. 732,079
3 Claims. (Cl. 152—241)



1. A collapsible anti-skid device of the character referred to including a pair of cross link receiving plates, a second pair of cross link receiving plates, a foldable frame connecting said plates in spaced apart relationship on the inside of a wheel and including a pair of substantially L-shaped channel members secured at their corners to each of said first named plates and adapted to limit the opening movement of the

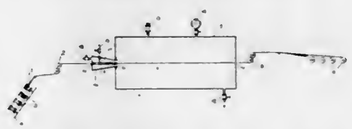
frame, cross links having one end secured to the plates, and an adjustable circumferential chain

on the outside of the wheel and connected to the other ends of said cross links.



2,450,043
SEWING MACHINE
Otto R. Haas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 1, 1945, Serial No. 626,043
19 Claims. (Cl. 112—38)

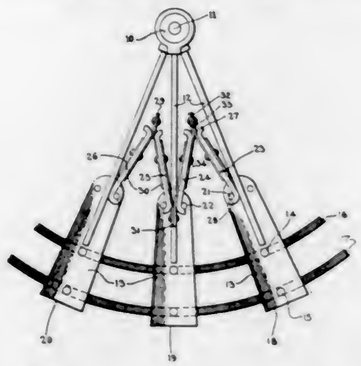
1. A sewing machine having a work support, and stitch forming devices including a needle and a thread cutter, in combination with means acting after the cutter has operated to secure the severed end of the thread remaining in the machine at a position to insure proper insertion of the initial stitch of a new seam when sewing operations are restarted, comprising a pneumatic thread holder located in proximity to the thread cutter to attract the end of thread after being severed.



2,450,044
TOOL HANDLE LOCK
Bryan J. Hobbs, Millwood, Wash.
Application July 1, 1946, Serial No. 680,727
1 Claim. (Cl. 306—28)

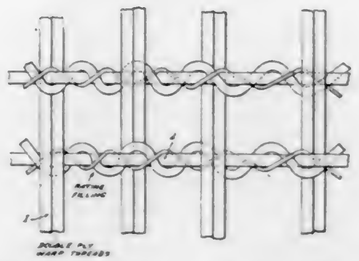
A tool head formed with a rearwardly extending shank and with a bore extending longitudinally through the shank and the head and tapered toward its front end for its full length, a handle having a tapered forward end position fitting into the bore through the rear end thereof and having a wedging fit therein, the shank being formed internally with a longitudinally extending recess deepened at its front end to form a socket located at the junction of the shank with the head, and a pin along its bottom the handle being formed with a longitudinally extending recess disposed opposite the recess in the shank and formed with notches across its inner wall, a latch extending longitudinally in the recess of said shank and formed at its front end with a hinge ear circular in cross section and fitting into said socket with a portion exposed through the open bottom of the socket, said pin passing

transversely through the hinge ear and side walls of the recess in the shank and pivotally mounting the latch for swinging movement into and out of the recess in the handle, said latch being formed across its inner side face with forwardly facing teeth for engaging in the notches of the recess in the handle and securing the head against forward movement off of the handle, and a set screw threaded through an opening in the shank and having its inner end abutting the free rear end portion of the latch to force the latch into the recess of the handle and hold the latch in its handle-securing position.



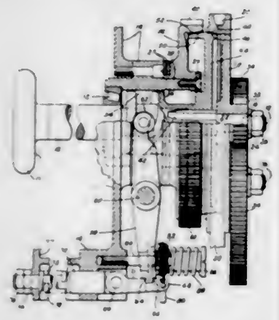
2,450,045
APPARATUS FOR THE TREATMENT OF TEXTILE STRANDS
Thomas Jackson and Frank Brentnall Hill, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application January 15, 1943, Serial No. 472,460
In Great Britain July 11, 1942
2 Claims. (Cl. 28—59.5)

2. Apparatus for the treatment of yarns and similar materials during their passage from one point to another, which comprises, in combination with a positively driven forwarding device adapted to feed the materials to the chamber and a positively driven forwarding device adapted to draw the materials from the chamber at a rate faster than that at which they are fed to the chamber by the first mentioned forwarding device, a substantially closed treatment chamber, an injector positioned in a wall of said chamber having an inner member serving as an inlet orifice for the materials and adapted to be connected to a water supply, and an outer member adapted to



produce an induced current of air through the inner member into the chamber and to be connected at will either to a compressed air supply or to a supply of wet steam, and an outlet orifice for the exit of the materials from the chamber.

2,450,046
LINKAGE FOR EQUISPACING RADIALLY GUIDED APPARATUS
Robert W. Jenny, East Paterson, N. J., assignor to Curtiss-Wright Corporation, Bloomfield, N. J., a corporation of Delaware
Application December 8, 1945, Serial No. 633,655
6 Claims. (Cl. 74—469)

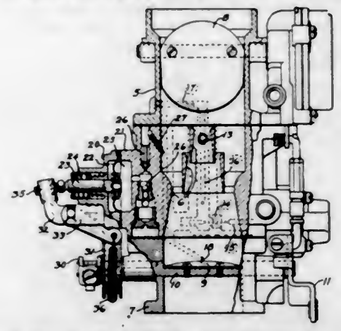


1. Mechanism comprising more than two coaxially mounted, angularly spaced and relatively turnable arms forming a set and means relatively turning said arms equal angular amounts on turning any two elements of the set relative to each other, said means comprising pairs of relatively turnable links for connecting each arm with the next adjacent arm, each link having at one end thereof a pivotal connection with its associated arm, the links of each pair disposed in V relation and the free ends of each pair of links being arranged for rolling movement relative to the other and each pair of links provided at its free ends with a connector hingedly connecting them together, and the links pivotally connected to a common arm being similarly connected together.

2,450,047
FABRIC
Fritz Kloeckener, New York, N. Y.
Application October 18, 1946, Serial No. 704,277
2 Claims. (Cl. 139—420)

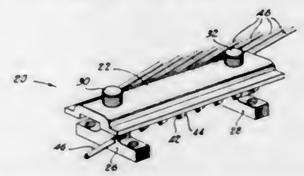
1. As a new article of manufacture, an all glass jacquard fabric having a warp consisting of glass yarn, and a filling consisting of glass ratine yarn, the filling based on ten inches of yarn, including a loop thread consisting of 2 ends of 450 single two ply thread 4 to 5 turns per inch S direction, 10 to 10.6 inches of yarn, a base consisting of 1 end of 100 two ply thread 9 to 10 turns per inch S direction 14.5 to 15.2 inches of yarn, the loop thread and the base being twisted together from 15 to 25 turns per inch S direction, a binder consisting of 1 end 450 single two ply thread 4 to 5 turns per inch S direction 10.2 to 10.8 inches of yarn twisted with the combined loop thread and base 10–11 turns per inch Z direction.

2,450,048
AUTOMATIC MANUALLY CONTROLLED CLUTCH
Clyde L. Knott, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 27, 1946, Serial No. 665,455
5 Claims. (Cl. 192—33)



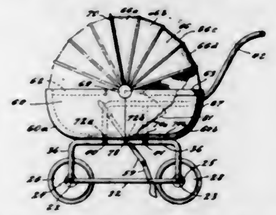
1. A clutch comprising a shaft a pair of rotary driving clutch members coaxial with the shaft, means for driving one of said clutch members at high speed and the other at low speed, a driven clutch member keyed upon said shaft between the driving clutch members, a cam on said driven clutch member, and an operator-controlled mechanism for moving said cam to shift the driven clutch member from a neutral position into engagement with said high-speed driving clutch member, said cam and said operator-controlled mechanism being constructed and arranged also to stop the drive by moving the driven clutch member out of engagement with the high-speed driving clutch member and then into engagement with the low-speed driving clutch member and finally into neutral position.

2,450,049
CARBURETOR DEVICE
Fred A. Kommer and Robert W. Boehlow, St. Louis, Mo., assignors to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application August 22, 1945, Serial No. 612,040
5 Claims. (Cl. 74—470)



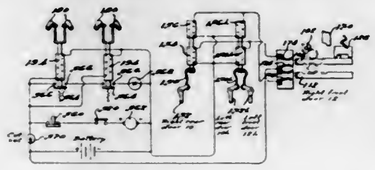
5. Means for transmitting motion between a rotating shaft and a reciprocating plunger spaced laterally therefrom comprising a sheave wheel loosely received about said shaft, a lever rigid with said shaft immediately adjacent said wheel, a second lever pivoted adjacent said reciprocating member and having an arm in alignment therewith for operating the same, and a spring cord

secured at one end to said first lever and at the other to said second lever, and intermediately ex-



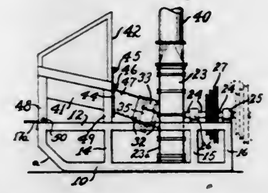
tending partially around the peripheral surface of said sheave wheel.

2,450,050
ELECTRICAL CONNECTOR
James C. Macy, New Cumberland, Pa., assignor to Aircraft-Marine Products Inc., Harrisburg, Pa., a corporation of New Jersey
Application September 28, 1945, Serial No. 619,050
4 Claims. (Cl. 173—334)



1. A bus bar of the character described for interconnecting a plurality of electrical conductors including a central portion having a plurality of counterpart connection portions projecting at closely spaced intervals therealong, each connection portion comprising a blade-like tab having a reversely bent back integral ear, each blade-like tab determining a plane, and the planes of any two adjacent tabs being disposed substantially parallel to each other and spaced apart by an amount which is slightly in excess of the overall diameter of an electrical conductor.

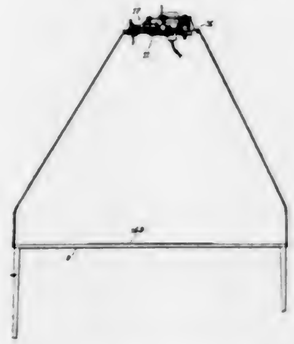
2,450,051
BABY CARRIAGE CONSTRUCTION
Fowler Manning, Bronxville, N. Y., assignor to Carry-Cab Corporation, New York, N. Y.
Application May 2, 1944, Serial No. 533,773
2 Claims. (Cl. 280—36)



2. In apparatus of the character described, a collapsible wheeled chassis including a pair of axles running transversely of said chassis, a pair of frame pieces running longitudinally of said chassis, one along each side thereof, and a pair of cross bars extending transversely between the upper portions of said frame pieces; said axles and cross bars including hinge means, whereby the chassis may be collapsed, and said cross bars comprising pin-like means adapted to cooperate with and support either a crib-like body for carrying a recumbent infant or a stroller-type body for carrying an erectly sitting child.

2,450,052
LOCKING SYSTEM FOR VEHICLE DOORS
Rollo Marple, Jackson, Mich., assignor to Hancock Manufacturing Company, Jackson, Mich., a corporation of Michigan
Application October 11, 1941, Serial No. 414,627
7 Claims. (Cl. 70—264)

1. In a latching and locking system for a vehicle having a plurality of doors and associated pillar structure, the combination of latch means individual to each door for cooperating between such door and said pillar structure to releasably hold such door in closed position, releasing means for each latch means, key operated mechanism carried by one of the doors, locking means mechanically moved by movement of said key operated mechanism for rendering the releasing means for the corresponding door ineffective, additional locking means comprising electromagnetic elements carried by said pillar structure and operably responsive to said movement of said key operated mechanism for rendering the releasing means for each other door ineffective, said additional locking means including means which, when actuated to locking condition, while rendering said releasing means ineffective as aforesaid, do not interfere with movement of a said other door from the open position to the closed position.

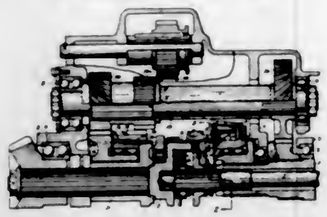


2,450,053
PNEUMATIC GRAIN CONVEYER
Glenn W. McCarty, Wichita, Kans.
Application September 8, 1945, Serial No. 615,131
1 Claim. (Cl. 302—37)

In a pneumatic grain conveyer machine of the kind described; said machine having a centrifugal blower and a grain hopper, tubular means connecting between the inlet of the blower and the outlet of the hopper, said tubular means slop-

ing downwardly from the hopper to the blower so as to convey grain by gravity from the hopper into the interior of the blower, said tubular means having a portion therein to form a compartment in the tubular means, one end of said compartment being open and communicating with the intake opening of the blower, and the compartment being provided with an inlet opening, and means revolvable and movable longitudinally on the tubular means for adjusting the size, shape, and location of the air intake opening into the said compartment, said blower having a discharge opening therefrom, and a rotor therein, said rotor being carried on a rotatable shaft that is carried in bearings that are separate from the blower, and means on said shaft for the rotary driving of the shaft and rotor.

2,450,054
AREA MEASURING MACHINE USING LIGHT BEAMS
Philip E. Nokes, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application August 25, 1941, Serial No. 408,228. Divided and this application May 11, 1944, Serial No. 535,115
2 Claims. (Cl. 88—14)



1. An apparatus for measuring the area of sheet material including a work supporting member having a reflecting surface for light received from a source spaced therefrom, a mirror system for scanning the said reflecting surface to transfer light reflected from said surface in the form of a beam, a photocell positioned in the path of the said beam, a shutter mounted to operate in synchronism with the mirror scanning system and regularly to interrupt passage of the beam to the photocell, and means associated with said photocell for counting the impulses produced therein as an indication of the area of sheet material placed upon said supporting member.

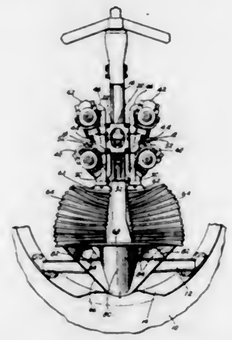
2,450,055
FOOD COMPOSITION CONTAINING FUSARIA
Friedrich F. Nord, New York, N. Y.
No Drawing. Application January 6, 1945, Serial No. 571,694
6 Claims. (Cl. 99—2)

1. A basal food composition consisting essentially of *Fusarium lini* Bolley as a protein and B-complex vitamin supplying ingredient, in admixture with other nutritional constituents.

2,450,056
TRANSMISSION MECHANISM
Carl D. Peterson and Albert H. Deimel, Toledo, Ohio, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application September 29, 1943, Serial No. 504,231, which is a division of application Serial No. 497,839, August 7, 1943. Divided and this application December 2, 1944, Serial No. 566,272
6 Claims. (Cl. 74—333)

1. In a transmission mechanism, inner and outer concentric drive shafts, a driven shaft axially alined therewith, shiftable clutch sections, an operating part common to both and operable in one direction from neutral to shift one of said sections to connect the outer drive shaft to the driven shaft and in the other direction from neutral to operate the other clutch section to clutch the inner drive shaft to the driven shaft, and an indirect reduction drive gearing between the outer drive shaft and the driven shaft including a countershaft, gearing between the outer drive shaft and the countershaft, gearing between the countershaft and the driven shaft including a clutch gear on the driven shaft, a gear concentric with the driven shaft and meshing with a gear on the countershaft and rotatable relatively to the driven shaft and the clutch gear, an overrunning clutch between the concentric gear and the clutch gear including an outer raceway, and a clutch collar normally clutching the outer raceway to the clutch gear.

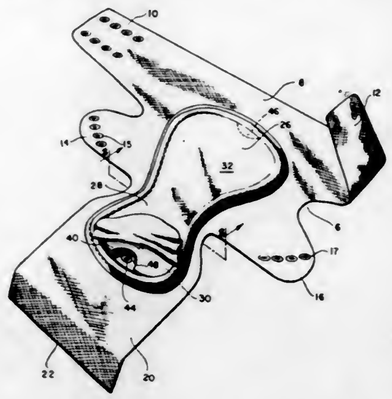
2,450,057
PROCESS FOR RECOVERING MAGNESIUM FROM MAGNESIA-CONTAINING MATERIALS
Richard Reik, Piedmont, Calif.
Application December 1, 1945, Serial No. 632,174
6 Claims. (Cl. 75—67)



4. The method of recovering magnesium by reduction, which comprises reducing a siliceous initial material with carbonaceous matter at a temperature at which SiO is liberated in the form of vapor according to the equation

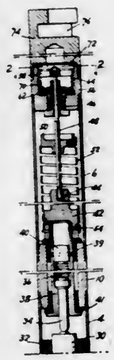
$$SiO_2+C=SiO+CO$$

while allowing the gaseous reaction products continually to escape into a non-oxidizing atmosphere, passing the SiO-vapor and CO-gas mixture evolved into intimate contact with a magnesia-containing material which is cold enough for the SiO-vapor to condense therein and thereby causing solid SiO to be deposited within said material while the accompanying CO-gas is caused to pass off; and then heating the reduction charge thus prepared to reduction temperature and condensing the magnesium vapor disengaged, the residue left behind being returned in cycle.



2,450,058
SPENT AMMUNITION ELIMINATING MEANS
George K. Richardson, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application July 3, 1944, Serial No. 543,345. Divided and this application December 2, 1946, Serial No. 713,572
3 Claims. (Cl. 89—33)

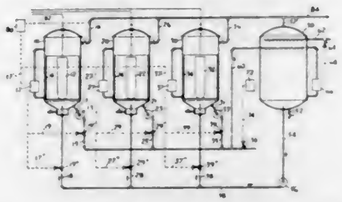
1. In a gun mount, a plurality of guns, a column on which the guns are supported for movement in elevation, rigid chutes secured to said guns and arranged to conduct spent ammunition elements therefrom, a flexible conductor one end of which is connected to said chutes, a ring secured to the column and arranged to provide a mounting for the other end of said flexible conductor, said ring having an opening through which spent ammunition elements pass from the flexible conductor.



2,450,059
DIAPER HAVING DISPOSABLE INSERTS
Floyd K. Rickerson, Seattle, Wash., assignor of one-fourth to Albert Lobe, Seattle, Wash.
Application July 14, 1947, Serial No. 760,759
5 Claims. (Cl. 128—284)

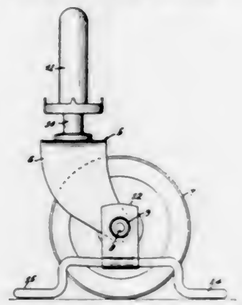
5. An infant's diaper, consisting of: a diaper body having an adjustable waist band portion; adjustable side enclosing portions; a front flap portion; a disposable pad-receiving area medially disposed with respect to the diaper body; a resilient wall extending around said pad-receiving area and forming a general hour-glass shaped enclosure; means for securing said wall fixedly in position with respect to the diaper body; an overlay of impervious material conforming to the said hour-glass shape, but of sufficient extent to overlie the enclosing wall; an absorbent filler of generally hour-glass shaped pieces adapted to fit

wholly within the said enclosed area; and a pervious covering member for said hour-glass shaped area.



2,450,060
WELL SURVEYING INSTRUMENT
Roland Ring, Houston, Tex., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware
Application November 20, 1945, Serial No. 629,729
10 Claims. (Cl. 33—205.5)

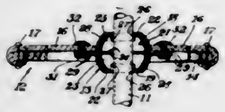
1. A well surveying instrument comprising means for supporting a record member, means for recording position of the instrument on said record member, and temperature responsive means for controlling the recording action, the last mentioned means comprising a rotary spindle, and a thermally responsive element arranged to rotate said spindle upon occurrence of temperature changes and having a spline connection with the spindle for independent axial movement.



4. A well surveying instrument comprising means for supporting a record member, means for recording position of the instrument on said record member, and temperature responsive means for interrupting the recording action.

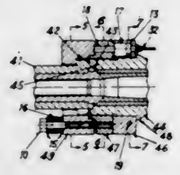
2,450,061
ELECTRIC BOILER
Arnold A. Smith, Three Rivers, Quebec, Canada, assignor to International Paper Company, New York, N. Y., a corporation of New York
Application September 24, 1945, Serial No. 618,101
4 Claims. (Cl. 219—40)

1. In a boiler, a boiler chamber, at least one electrode positioned therein and adapted to be partially submerged in water, an electrically grounded baffle surrounding and spaced from said electrode, a separate surge tank, a pressure equalizing connection between said boiler chamber and said surge tank, a first pump for positively pumping water from said boiler into said surge tank, a second pump for positively pumping water from said surge tank into said boiler, said first and second pumps being capable of handling water at a rate in weight per unit of time greater than the maximum rate of steam delivery from said boiler chamber, and means responsive to steam demand for controlling the relative outputs of said first and second pumps to raise or lower the depth of submersion of said electrode.



2,450,062
CASTER GUARD
Grace Voss, New York, N. Y., and Victor G. Ellis, Montclair, N. J.
Application June 17, 1946, Serial No. 677,356
7 Claims. (Cl. 16—18)

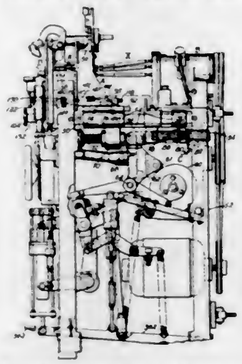
1. In a device as described, a caster frame, an axle, a wheel supported therein and a guard, consisting of U-shaped members supported on the axle and surrounding the wheel, with its lower edge spaced only slightly above the plane tangent to the periphery of the wheel.



2,450,063
SWIVEL HEAD FOR SKI POLE RINGS
Siegmund Werner, New York, N. Y.
Application March 21, 1947, Serial No. 736,199
9 Claims. (Cl. 280—11.37)

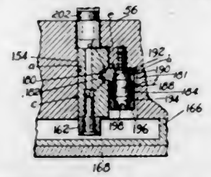
7. The combination with a ski pole ring designed to be tiltably secured to a ski pole and freely to rotate thereon, said ski pole ring comprising a ring and strap means connected to said ring, of a swivel head secured to said strap means about centrally of said ring and comprising two oppositely disposed substantially hemi-spherical parts and a housing surrounding a spherical chamber, said parts arranged to revolve in said

chamber and substantially to remain oppositely disposed therein to form a split spherical member and adapted to receive a portion of a ski pole in two aligned opposite openings thereof in frictional engagement, said housing having two apertures through which said pole protrudes for entirely projecting through said swivel head.



2,450,064
BARREL AND BREECH RING WITH SPRING MEANS FOR CONNECTING THE SAME
Max Wernli, Schaffhausen, Switzerland, assignor to Verwaltungsgesellschaft der Werkzeugmaschinenfabrik Oerlikon, Zurich-Oerlikon, Switzerland
Application May 18, 1945, Serial No. 594,475
In Switzerland April 12, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 12, 1964
10 Claims. (Cl. 89—14)

1. In a gun, in combination, a barrel, a breech ring, spring tensioned means carried by said breech ring and releasably connecting said barrel to the breech ring, and hydraulic pressure operated means associated with the first mentioned means and so constructed and arranged to compress the same and release the barrel from the breech ring.

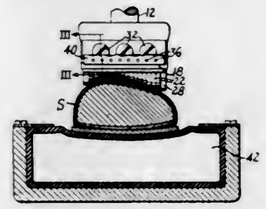


2,450,065
DRILLING MACHINE
Herbert J. Willmott, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application August 4, 1943, Serial No. 497,415. Divided and this application December 21, 1944, Serial No. 569,121
10 Claims. (Cl. 144—93)

1. In a drilling machine, a frame, a member slidable in the frame, a spring interposed between the frame and member, a lever against which the member is urged by the spring, a rotatable cam against which the lever is held by said spring, a sleeve guided in the frame, links joining the sleeve to the lever, a crossbar connecting the links, a drill-mounting movable upon the frame and having a portion engaging the crossbar, and a spring interposed between the sleeve and mounting-

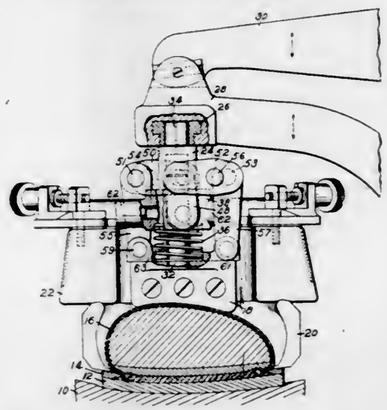
portion and acting to urge said mounting-portion against the crossbar.

2,450,066
GUIDE FOR DRILL CHUCKS
Herbert J. Willmott, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application August 4, 1943, Serial No. 497,415. Divided and this application December 21, 1944, Serial No. 569,122
7 Claims. (Cl. 144—92)



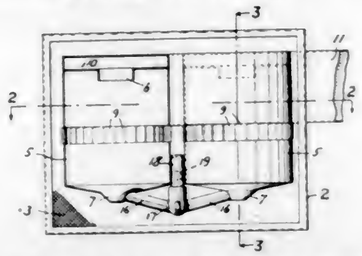
1. In a drilling machine, a mounting in which is a depression having two walls substantially at right angles to each other, a drill-chuck-carrier movable in contact with one of the depression-walls with the axis of the drill parallel to said wall, said carrier having a groove extending transversely of the axis of the drill, a guide member movable along the second depression-wall toward the first-mentioned wall and lying in the groove in the carrier, and means movable in said second depression-wall for forcing the guide member into the carrier-groove against opposite walls thereof.

2,450,067
KNITTING DEVICE
Harry J. D. Wolff, Van Nuys, Calif., assignor to Ernest A. Huntley, Burbank, Calif.
Application March 25, 1946, Serial No. 656,808
5 Claims. (Cl. 66—4)



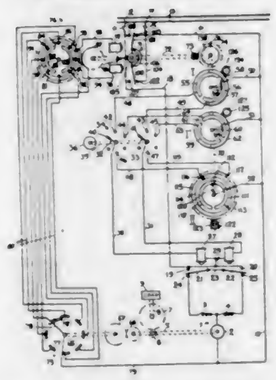
1. A knitting device, comprising: a pair of opposed and spaced finger bars; sets of integral upstanding fingers spaced in staggered relation along the confronting upper margins of said bars, said fingers including upwardly tapering shanks, the upper portions of the shanks of the opposed sets of fingers curving away from each other and terminating in rounded head elements on their remote sides.

2,450,068
TOE REST
Charles K. Woodman, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 16, 1947, Serial No. 741,749
8 Claims. (Cl. 12—127)



1. In a shoe machine, a rest for engaging the forepart of a shoe upon a last, said rest comprising a casing having a bottom, a plurality of elongate members grouped in the casing in contiguous parallel relation to one another with their outer ends exposed and relatively movable in that relation when the rest and shoe are pressed together to conform to the portion of the surface of the shoe which is engaged by the rest, a mass of steel balls between the inner ends of the elongate members and the bottom of the casing, a cover over the exposed ends of the elongate members, and means other than the cover for retaining said members in the casing.

2,450,069
WELT PRESSING MEANS FOR SOLE ATTACHING MACHINES
Charles K. Woodman, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 20, 1947, Serial No. 756,053
4 Claims. (Cl. 12—33)

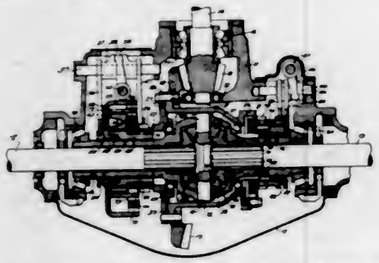


1. In a sole attaching apparatus, a press pad engageable with a shoe sole, a toe pad and a welt presser both confronting the press pad and interconnected for pressure balancing movement relative to the press pad.

2,450,070
MARINE SEA CHEST SAND SEPARATOR
Bruce R. Wright, Lakewood, Ohio, assignor to Centrifix Corporation, Cleveland, Ohio, a corporation of Ohio
Application November 2, 1944, Serial No. 561,619
4 Claims. (Cl. 114—0.5)

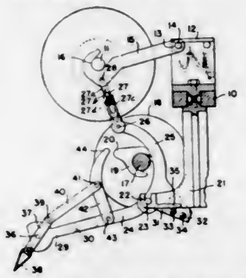
1. In a cooling system for marine motors, in combination, a hull, a sea chest within the hull and having communication through the hull for the entry of sea water, a tuyère comprising a body provided with tangential openings mounted within said chest and adapted to receive through said tangential openings water carrying sand whereby a whirling motion will be imparted to water carrying sand within said tuyère to effect separation of sand and water, means for drawing sea water into the sea chest and for the withdrawal of water from the top of said tuyère, a fluid actuated ejector in communication with the bottom of said tuyère for the withdrawal of sand therefrom and means connected with said ejector for the discharge of sand without said chest.

2,450,071
SYNCHRONOUS PRESET REMOTE CONTROL SYSTEM
Michel N. Yardeny, New York, N. Y.
Application November 23, 1944, Serial No. 564,868
5 Claims. (Cl. 318—33)



4. A control apparatus comprising a plurality of selectors at a control point; each selector comprising a pair of control elements, one element of each pair being movable, the other being stationary, each pair comprising electrically conducting means having a neutral point and a contact member for engaging the conducting means; a reversible drive means including an electric motor at a remote point for moving a useful load; a second reversible drive means including a pilot motor at the control point for simultaneously moving the movable elements of all the pairs; switch means at the control point to selectively energize one of the selectors; means to electrically control the load motor by the position of the contact member of the selected pair at one or the other side of the neutral point and to stop the load motor in response to the neutral point being occupied by the said contact member; a pair of relatively movable control members at the control point for electrically controlling the pilot motor; and means at the remote point controlled by the load motor and electrically controlling the relative position of the relatively movable control members for effecting corresponding movements of both the motors, thereby placing the load in a position as determined by the selected selector.

2,450,072
PAINT PASTE
Adolfo Cornelio Saavedra Zavaleta, Buenos Aires, Argentina
No Drawing. Application October 30, 1945, Serial No. 625,677. In Argentina November 13, 1944
1 Claim. (Cl. 106—79)



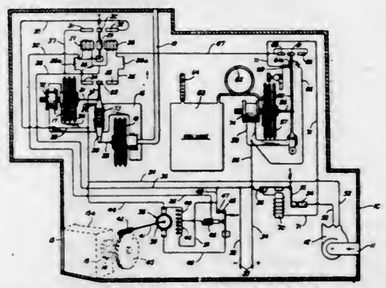
A paint paste composed of a base for water comprising about 200 parts, by weight, of casein, about 5 parts, by weight, of borax, and about 5 parts, by weight, of sodium silicate, and a base for oil comprising about 500 parts, by weight, of cooked linseed oil, 300 parts, by weight, of lithopone, and about 200 parts, by weight, of zinc oxide, both of said bases being combined with an emulsifier comprising about 200 parts, by weight, of castor oil, and about 5 parts, by weight, of sulphuric acid.

2,450,073
MULTIPLE-SPEED AXLE
Frank W. Avila, Fort Wayne, Ind., assignor to International Harvester Company, a corporation of New Jersey
Application August 16, 1943, Serial No. 498,799
3 Claims. (Cl. 74—314)

1. A combined differential and change speed unit having axially aligned axles and axle driving gears mounted thereon and bevelled pinion gears in driving engagement with said axle driving gears comprising a driving member having a lateral extension to one side of said differential, a driven member concentric with said axially aligned axles and carrying said beveled pinion gears, a multispeed gearing adjacent said differential, said multispeed gearing including a laterally shiftable member carrying an internal ring gear and a laterally spaced external dental clutch member, said shiftable member arranged and constructed to rotate concentrically with said driven member, an external ring gear carried on said lateral extension and an internal dental clutch member forming part of said lateral extension said external ring gear and the internal dental clutch positioned intermediate the internal ring gear and the laterally spaced external dental clutch member, and a ring member eccentrically journaled within said laterally shiftable member, said ring member having an external ring gear and an internal ring gear, the external ring gear of the eccentrically journaled member being in cooperative engagement with the internal ring gear of the laterally shiftable member, whereby lateral shifting movement of the shiftable member in one lateral direction will effect an underdrive from the external ring gear carried on the lateral extension out through the internal ring gear on the eccentrically journaled member and from the external ring gear on the eccentrically journaled member to the internal ring gear of the shiftable member, and whereby movement of the shiftable member in the opposite lateral direction will effect a direct drive through the cooperative external and internal dental clutch members.

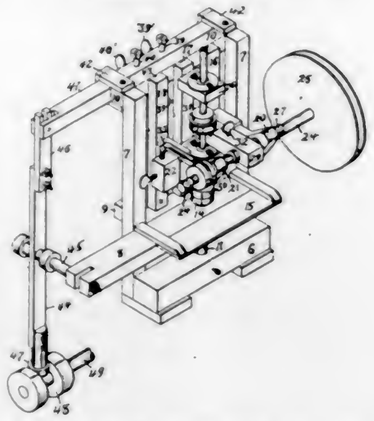
2,450,074
BOBBIN LIFTER
Robert J. Bartholomew, Philadelphia, Pa., assignor to Fletcher Works Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application November 12, 1947, Serial No. 785,477
12 Claims. (Cl. 242—37)

8. In an attachment for a yarn winding machine having a frame and a horizontal shaft with a driving roll for peripheral engagement with a yarn package, the combination of supporting members movably mounted with respect to said frame in which a yarn package is rotatably mounted for engagement with the driving roll, means responsive to the release of the tension of the yarn delivered to the yarn package for moving said supporting members to a position to separate the yarn package from engagement with the driving roll, said means including a lever pivotally mounted with respect to said frame and a link member interposed between said supporting members and said lever, said link member being adjustable in length for controlling the size of the yarn package by the separation of said package from the driving roll.



2,450,075
BURR-CUTTING TOOL
Laurence A. Bashara, Portage Township, St. Joseph County, Ind.
Application June 16, 1944, Serial No. 540,613
3 Claims. (Cl. 77—73)

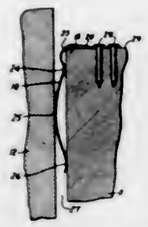
1. In a tool for removing burrs from the mouth of a circular opening in a machined metal part, an elongated body comprising a shank and a cutting head integral with said shank, said cutting head being circularly bent through slightly less than 360° and having at least one cutting edge at its outer periphery adapted to engage substantially diametrically opposed portions of the mouth



of said opening, said head and shank lying in a common plane and said shank extending substantially radially relative to said head.

2,450,076
CABIN PRESSURE CONTROL
Paul F. Bechberger, Tenafly, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware
Application November 5, 1940, Serial No. 364,468
5 Claims. (Cl. 98—1.5)

1. An aircraft having a compartment, an energized blower for building up pressure in said compartment, valve means normally communicating the interior of the compartment with the exterior thereof, a pressure sensitive element having one side in communication with the pressure within said compartment and the other side thereof in restricted communication with said compartment pressure, switch means adapted to be actuated by the movement of said pressure sensitive element upon a predetermined rate of change in compartment pressure, and a circuit including said switch means, said blower and said valve means; the movement of said pressure sensitive element in one direction when the cabin pressure falls at a rate higher than a pre-selected value during ascent of the craft actuating said switch to operate said valve means to close the communication between the interior and exterior of said compartment, the movement of said element in an opposite direction when cabin pressure rises at a rate higher than a pre-selected value during rapid descent of the craft actuating said switch to operate said valve means to close the communication between the interior and exterior of said compartment and to de-energize simultaneously said blower.

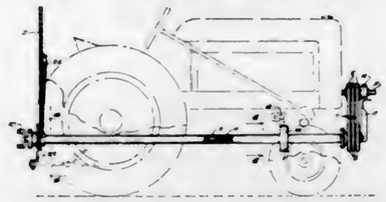


2,450,077
WIRE-DRAWING DIE LAPPING MACHINE
Paul Bieberich, Fort Wayne, Ind.
Application August 1, 1946, Serial No. 687,762
7 Claims. (Cl. 51—50)

1. A wire-drawing die lapping machine consisting of a supporting frame, a series of arms pivoted on said frame for lateral swinging movement, a rotary arbor mounted in bearings on said frame provided with a die mount and a pulley, a spindle mounted in bearings on one of said arms, having axial reciprocating and rotary movement and provided with another pulley, brackets pivotally mounted respectively on the other arms, a cam shaft extending through said brackets having rotary movement therein and provided with a cam secured thereon between said brackets, a rock-shaft extending through said brackets having axial movement therein and provided with a grooved collar, an actuating arm on one of said brackets engaging said collar to activate the rock-shaft axially, a finger loosely mounted on the rock-shaft operatively connected with said spindle to reciprocate same through the medium of said cam, a sliding bar having reciprocating movement in guides on the frame and provided with adjustable dogs that engage in splines in certain of said arms respectively, a mechanism for activating said sliding bar, and motion transmitting means to rotate the cam shaft, the arbor and said spindle.

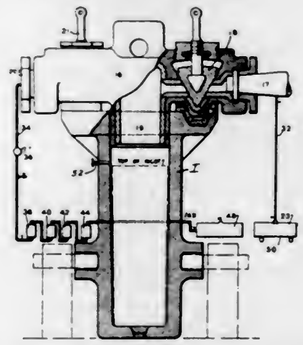
2,450,078
RESILIENT SASH BEARING
Fred Booth, Jr., Los Angeles, Calif., assignor to Duplex Incorporated, Los Angeles, Calif., a corporation of California
Application September 28, 1945, Serial No. 619,091
2 Claims. (Cl. 292—76)

2. A resilient sash bearing comprising a ribbon spring which when in equilibrium comprises a flat anchor terminal section, an arcuate bend extending outwardly and laterally from one end of the terminal section, a reverse direction bend forming a first bearing point at the free extremity of the said arcuate bend, a loop bowed in the same direction as the arcuate bend and longer than the same and extending laterally and outwardly from the reverse direction bend, the terminal end of the loop forming a second bearing point, the said loop lying in a general plane at an obtuse angle to the anchor terminal section, the said anchor terminal section being adapted to be mounted horizontally on a rail of a sash at a location spaced away from the arcuate bend, and when thus anchored the spring at an intermediate point in the said arcuate bend may contact the corner of the sash but the radius and arc of said bend are such that the spring is sprung vertically away from the rail of the sash and outwardly away from the side of the sash and when not in operating proximity to a sash guide neither of said first or second bearing points is in contact with the sash, and when the mounted spring is in operating proximity to a sash guide the convex surface



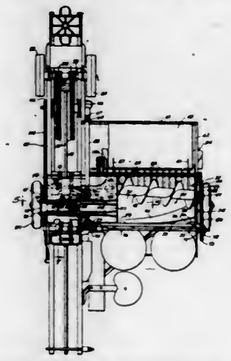
of the loop yieldably presses against the guide and at least one of said bearing points engages the side of the sash, and if pressure between guide and sash is sufficient both said bearing points engage the side of the sash, the radius and arc of said arcuate bend being proportioned and located relative to the said loop so that the convex surface of said bend is adapted to resiliently bear against the sash guide upon increase of pressure between sash and guide sufficient to overcome the resistance of the spring established upon contact of both said bearing points with the sash.

2,450,079
WAXY POLYOL ETHER-ESTERS
Kenneth R. Brown, West Chester, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 23, 1943, Serial No. 484,317
4 Claims. (Cl. 260—410.6)



1. A process which comprises: (1) reacting a solution of a saturated polyol and water with an olefin oxide, said polyol containing at least three hydroxyl groups, from three to six carbon atoms per molecule, and only carbon, hydrogen, and oxygen, said water being present in the proportion of from 0.08 to 1.5 mols per mol of hydroxyl radical in said polyol, said olefin oxide being selected from the group consisting of ethylene oxide, propylene oxide, and mixed ethylene and propylene oxides and being employed in a molal quantity of at least 0.4 times the total molal quantity of hydroxyl in the polyol plus water and of at least 1.5 times the molal quantity of water, and said reaction being conducted between about 80° and about 140° C. in the presence of an etherification catalyst; and (2) esterifying the reaction product with an aliphatic, straight chain, saturated, mono-basic acid containing at least 16 carbon atoms, said acid being employed in a molal quantity at least equal to one-half the molal quantity of water plus one-half the molal quantity of hydroxyl in the polyol, and said esterification conducted between about 150° C. and about 280° C. in the presence of an esterification catalyst; and the amount of olefin oxide being employed in an amount small enough that a final product having a titer of at least about 30° C. is obtained.

2,450,080
POWER TAKE-OFF DEVICE
James H. Burrell and Paul E. Richey, Rocky Ford, Colo.
Application September 26, 1947, Serial No. 776,344
4 Claims. (Cl. 74—242.16)



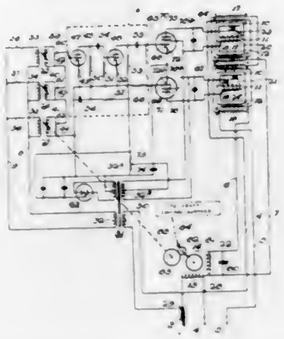
1. The combination with the crank shaft of a tractor, of a power take-off comprising pulleys secured to the crank shaft, a tubular power shaft housing mounted on the tractor, a power shaft mounted within the tubular shaft housing, pulleys on the power shaft, belts operating over the pulleys of the crank shaft, transmitting movement of the crank shaft to the power shaft, a support for the tubular power shaft housing, comprising a circular housing, a bracket to which the circular housing is secured, the bracket being secured to the tractor, a disc eccentrically secured to the power shaft housing, fitted within the circular housing, and means for rotating the tubular power shaft housing and disc within the circular housing, whereby the pulleys of the power shaft are moved towards or away from the pulleys of the crank shaft, loosening or tightening the belts, and regulating the operation of the power shaft.

2,450,081
NOBLE GAS METALLURGY
George R. Burkhardt, Chicago, Ill.
Application April 5, 1945, Serial No. 586,809
4 Claims. (Cl. 148—16.7)

1. In the manufacture of steel, a method for improving the physical properties thereof which comprises subjecting solid steel at a temperature between about 1330° F. and 2550° F., at which austenite is present, to an atmosphere of a noble gas surrounding said steel, said gas being under pressure between about 1,000 and 4,000 pounds per square inch, said steel being surrounded by said atmosphere under said pressure for a substantial period of quiescence during which occluded and dissolved gases in the steel become dispersed into the said noble gas atmosphere, thereafter cooling said steel to ordinary temperatures in said noble gas atmosphere while under said pressure and finally separating said steel from said noble gas atmosphere.

2,450,082
PICKUP BALER
Charles F. Crumb, Clarendon Hills, and Lee H. Kaupke and Russell R. Raney, La Grange, and Lewis E. Smith, Congress Park, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application November 21, 1942, Serial No. 466,460
19 Claims. (Cl. 100—25)

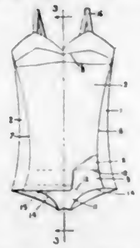
1. In combination, a supporting means, means forming a baling chamber extending in a certain direction and having a feed opening in a vertical side thereof, means mounting the last-mentioned means on the supporting means, a plunger mounted in the baling chamber for reciprocation in the said certain direction, a spiral feed element extending generally transversely of the said certain direction of the baling chamber generally toward and at the level of the feed opening for feeding material to be baled to the said feed opening, and means mounting the end of the spiral feed element away from the baling chamber upon the supporting means so as to leave the end adjacent the baling chamber open and unsupported, and said mounting means including means for floatingly mounting the spiral feed element above said platform whereby the spiral feed element rises and falls with variations in the incoming quantities of material to said platform.



2,450,083
TREATED PAPER LINER FOR ADHESIVE ROLLS
Henry Verner Donaldson, Glencoe, Ill., assignor to The Munising Paper Company, Munising, Mich., a corporation of Ohio
Application February 7, 1944, Serial No. 521,357
2 Claims. (Cl. 154—53.5)

1. As an article of manufacture, adhesive sheet material adapted to be removably secured to a person consisting of a base, a coat of adhesive material on said base, and a paper cover on said adhesive surface containing and impregnated with a synthetic resin bonding the lint fibers on the surface of the paper to the base thereof and incorporating in the base the physical characteristics of imperviousness and flexibility with-

out brittleness whereby the paper cover can be removed from the adhesive surface without adherence of any particles of one material upon the other.

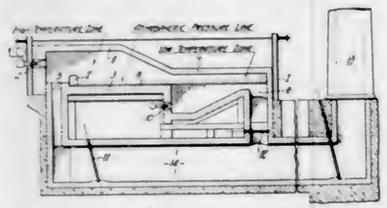


2,450,084
ELECTRIC MOTOR SERVO CONTROL SYSTEM
John F. Emerson, Hasbrouck Heights, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 31, 1943, Serial No. 516,445
3 Claims. (Cl. 318—28)

1. The combination with at least two variable inductive devices adapted for developing separate signals of changing phase and amplitude and a reversible motor energized in accordance with the algebraic sum of said signals together with a controlled member driven by said motor, of amplifying means connected to said devices and responsive to said signals as well as to the phase thereof for determining the energization and the direction of rotation of said motor, said means comprising a pair of electronic members, one or the other of which becomes conductive depending upon the phase of said signals, a pair of magnetically permeable core members, each core member being formed with a central leg and a pair of spaced parallel outer legs, A. C. supply windings on the outer legs of both of said core members connected with each other in series aiding relation, A. C. output windings on the outer legs of both of said core members and connected in series opposed relation whereby normally the system is balanced and no current is induced to flow in said output windings in response to A. C. current flow in said supply windings, a saturating winding on the central leg of each of said core members whereby in response to current flow in one or the other of said saturating windings the system is unbalanced to provide an A. C. current at said output windings, means connecting said saturating windings to said electronic members, and means connecting said output windings to said motor.

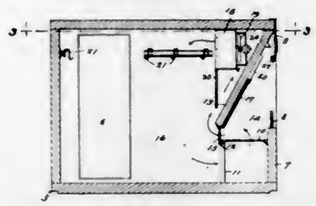
2,450,085
SWIMMING SUIT
John O. Gantner, Jr., San Francisco, Calif.
Application February 24, 1947, Serial No. 730,407
3 Claims. (Cl. 2—67)

1. A swimming garment having increased visibility in and out of the water and a resulting increased safety factor, comprised of a fabric of fluorescent material extending at least substantially from side to side of the garment and being capable of converting ultra-violet light received



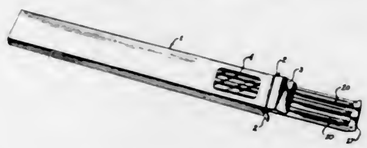
thereby into visible light and giving off the same as added illumination.

2,450,086
PREPARATION OF PHENOLPHTHALEIN β,β'-DIGLUCOSIDE
Ralph A. Hales, West Chester, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 23, 1946, Serial No. 685,769
5 Claims. (Cl. 260—210)



1. In a process for the preparation of phenolphthalein beta, beta'-diglucoside octaacetate by the reaction of phenolphthalein and tetraacetylglucosyl bromide in a solvent, the improvement which comprises performing the reaction in the presence of a catalyst selected from the class consisting of silver oxide and silver carbonate, and another catalyst comprising a substance selected from the group consisting of quinoline, isoquinoline, quinaldine, and lepidine, said other catalyst further including an added substance selected from the group consisting of pyridine, alpha picoline, lutidine, and collidine.

2,450,087
OPEN-FLAME HEATED CONTINUOUS FURNACE
Fred N. Hays, Edgewood, Pa.
Application April 27, 1944, Serial No. 532,996
2 Claims. (Cl. 263—43)

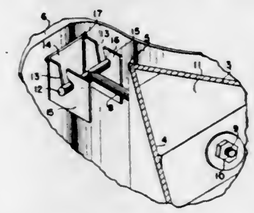


1. In a continuous heating furnace having a horizontal hearth adapted to support work in its travel through the furnace, a roof and walls enclosing said hearth, a work entrance and a work exit in the walls adjacent opposite ends of said hearth, at least one open flame burner adjacent the work exit, at least one flue opening adjacent the work entrance, at least one flue opening adjacent the work exit, and stack connections for said flue openings, the improvement which comprises having the lower limiting position of said flue opening adjacent the work exit at the level of the horizontal hearth, which enables the furnace to be controlled with the atmospheric pressure level at hearth level.

2,450,088
OPEN-FRONT REFRIGERATED DISPLAY CABINET
Elden O. Henderson, Oklahoma City, Okla., assignor to E. O. Henderson & Sons, Oklahoma City, Okla., a partnership
Application April 8, 1947, Serial No. 740,058
4 Claims. (Cl. 62—89.5)

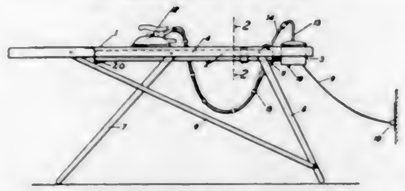
1. A refrigerating apparatus comprising a cabinet, an inwardly and downwardly inclined wall extending from the front edge of the top of the cabinet, dividing the cabinet into a storage compartment and a forward display compartment, a perforated shelf supported within the display compartment and on which articles are supported, the space below the shelf being open to induce circulation, a perforated wall connected with the inwardly and downwardly inclined wall and engaging the shelf at the rear edge thereof, a refrigerating unit mounted within the storage compartment within the space between the upper end of the inclined wall and top of the cabinet, and said refrigerating unit adapted to create a circulation of cool air through the shelf, perforated wall and storage compartment.

2,450,089
THERMOMETER PACKAGE
Valentine Hiergesell and Frank O. V. Hiergesell, Springfield Township, Montgomery County, Pa.
Application October 9, 1947, Serial No. 778,816
1 Claim. (Cl. 206—65)



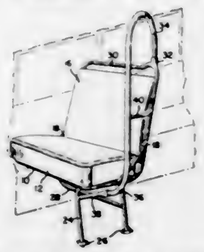
Carton package for thermometers and the like comprising a tubular carton of elongated rectangular cross-section, having a relatively broad front and back and relatively narrow sides and having end closures of the tuck flap type and a window in the front adjacent the upper end of said carton, a filler within said carton comprising a strip corrugated longitudinally, of such width as to snugly fit between the narrow sides of said carton, and a flat strip congruent with the corrugated strip glued to the peaks of the corrugations on one side thereof, said filler being folded along transverse lines at the top and bottom of said carton with its flat side outwardly, defining a panel extending the length of said carton against the back, a panel against the front extending from the lower end of said carton a substantial distance toward said window, and a flap at the upper end substantially congruent with the cross-sectional area of said carton, the peaks of the confronting corrugations of said panels meeting in the longitudinal medial plane intersecting the sides of said carton, said confronting corrugations defining cells of a size to snugly embrace the thermometers, and defining a system of diagonal bracing thrusting against all four of the lateral walls of said carton.

2,450,090
CLAMP FOR ATTACHING ARTICLES TO THE TOPS OF AUTOMOBILES
William H. Hunt, Bridgeport, Conn.
Application February 2, 1946, Serial No. 645,182
5 Claims. (Cl. 24—243)



1. A clamp for attachment to a gutter trough of an automobile, comprising a rigid plate with tension-supporting attachment means at one end thereof, a hook-shaped flange hinged to the opposite end of the plate to project entirely beyond the end of the plate and shaped to engage the under-surface of a gutter trough, and a resilient tongue connected to and extending diagonally outward from the plate intermediate its ends, and bowed inward toward the plate, said tongue extending past the hinge and into said hook-shaped flange when the hinge is substantially straight and the hook-shaped flange is disposed beyond the end of the plate so as to clamp the gutter trough between the end of the tongue and the flange when the plate extends upward from the edge of the gutter trough.

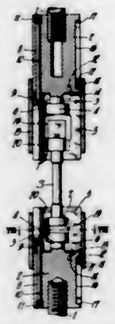
2,450,091
CORNER HOLDING DEVICE
Floyd J. Kendall, Springfield, Ohio, assignor to The Springfield Metallic Casket Co., Inc., Springfield, Ohio, a corporation of Ohio
Application February 13, 1946, Serial No. 647,354
6 Claims. (Cl. 27—2)



1. In a corner escutcheon plate for a casket or like member, means for attaching said escutcheon plate to the corner of a member, said means comprising a U-shaped clip secured to the inside of the plate and having slots therein inclined with the open ends toward said plate, a T-shaped bolt having its crosshead in said slots and its shaft adapted to extend through said corner, and a channel shaped clip having a hole to receive said bolt and adapted to engage the inside of the corner of the member, the said means thus providing for a concealed support for said plate.

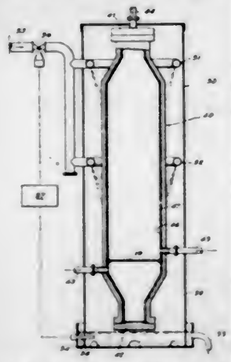
2,450,092
IRONING BOARD HAVING STEAM GENERATING MEANS
Ludwig Reichold, Winsted, Conn., assignor to The Silex Company, Hartford, Conn., a corporation of Connecticut
Application August 16, 1944, Serial No. 549,688
5 Claims. (Cl. 38—104)

1. In an ironing board having means for supplying steam for use with a steam iron, a reservoir of substantial area and of shallow depth mounted on and extending over a major portion of the underside of said ironing board, and a steam generator for supplying steam to said iron and connected to the reservoir; the bottom of said steam generator being lower than the bottom of the reservoir to permit drainage of liquid from the reservoir to the generator.



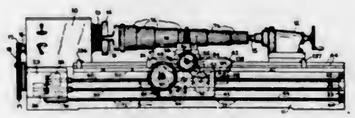
2,450,093
COACH OR BUS SEAT
Harry C. Richardson, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application December 23, 1946, Serial No. 717,919
7 Claims. (Cl. 155—1)

2. In a vehicle seat having a frame with a lower portion for supporting a seat cushion and an upper portion for supporting a back cushion, said upper portion having a grab rail; a stanchion for standee passengers comprising a cylindrical member having one end rigidly connected with said grab rail at the aisle side thereof and extending upwardly therefrom, said stanchion then being bent forwardly and having the other end extending vertically downwardly between the front and back edges of the seat cushion; and supporting means for said other end of said stanchion rigidly connecting said last mentioned end to the lower portion of said frame.



2,450,094
GRIP
Robert I. Sanderson, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application February 23, 1945, Serial No. 579,455
5 Claims. (Cl. 73—103)

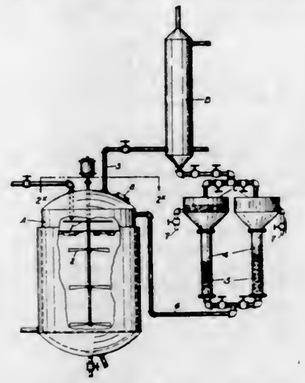
5. A grip including the combination of a neck, an outwardly extending horizontal flange on said neck, a member for supporting said neck, a sleeve encircling said neck and said flange, an inwardly extending horizontal flange on said sleeve engaging said outwardly extending flange, said sleeve comprising a plurality of laterally separable sleeve parts, pivot means mounted in said member substantially parallel to the axis of the sleeve for supporting said sleeve parts for pivoted movement in a plane normal to the sleeve axis, means forming parts of the sleeve and member for restraining swinging of said sleeve parts in sleeve-opening directions beyond limits causing complete



disengagement of said flanges, means on said sleeve beyond said flanges for gripping an object when said sleeve parts are closed, a sleeve longitudinally slidable on the first named sleeve when said sleeve parts are closed and which restrains said sleeve parts in closed position while on said first sleeve, a surface on said member beyond this second named sleeve and longitudinally registering therewith when said sleeve parts are closed and slidably receiving said second named sleeve when it is retracted from said first named sleeve, and means for holding said second named sleeve in retracted position on said surface.

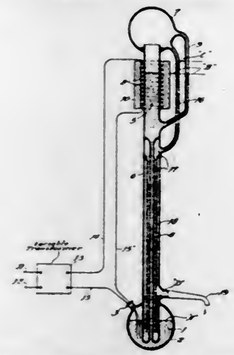
2,450,095
CORROSION PREVENTION
James E. Seebold, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application March 27, 1945, Serial No. 585,122
6 Claims. (Cl. 260—683.5)

1. A method for inhibiting corrosion of an inner surface of a metal reactor within which is reacted hydrocarbons and halogen-containing materials at a reaction temperature sufficient to cause isomerization of the hydrocarbons comprising lining the inner surfaces to be protected with a non-metallic material and spraying the corresponding outer surface of the reactor with water to maintain said inner surface at a temperature substantially below the reaction temperature whereby the corrosion is substantially inhibited.



2,450,096
AUTOMATIC STEP TURNING LATHE
Harold J. Siekmann, Cincinnati, and William A. Kimsey, Mariemont, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application January 27, 1947, Serial No. 724,558
8 Claims. (Cl. 82—14)

1. In a step turning lathe having a headstock, a work spindle in said headstock including means for supporting and rotating a work piece in said lathe, a feed drive transmission actuated by said headstock, a pair of magnetic clutches driven from said feed transmission, a cariage feed rod journaled longitudinally of the bed of said lathe connectable or disconnectable to be driven from said feed transmission by one of said magnetic clutches, a cross slide feed rod journaled longitudinally of the front of said bed of said lathe adapted to be connected or disconected through the other of said magnetic clutches to said feed transmission, reversing mechanisms in said apron operably connected to be driven from said feed rods for any position of relative movement of the apron and carriage of said lathe on said bed, means for connecting power from one of said reversing mechanisms associated with the carriage feed screw to actuate the rack pinion in the apron of said lathe to effect longitudinal feeding movements of the carriage along the bed, and further gear transmission means connecting said other reverser mechanism associated with the cross slide feed rod to the cross feed screw of said lathe for effecting transverse movements of the cross slide, and electrical control mechanism operated by the relative movement of the carriage and cross slide for energizing and de-energizing said magnetic clutches in a predetermined sequential order to effect a step turning operation of a cutting tool on the cross slide of said lathe on a work piece mounted on the work spindle.



2,450,097
PROCESSING FRUIT JUICES
Gray Singleton, Lakeland, Fla.
Application October 4, 1945, Serial No. 620,373
10 Claims. (Cl. 99—155)

1. The process of treating fruit juices containing peel oil and acid constitutents consisting in raising the temperature of the juice to the boiling point in a closed container under a vacuum sufficient to vaporize the peel oil and acid constituents, passing said vapors through a condenser, filtering the condensate to remove said acids

and reintroducing the filtered condensate into said container.

2,450,098
MERCURY VACUUM STILL
Marvin A. Smith, Western Springs, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application March 24, 1945, Serial No. 584,698
7 Claims. (Cl. 202—205)

1. A vacuum still for mercury comprising a bottom reservoir for impure mercury, concentric tubes for barometric mercury columns, an inner tube of said concentric tubes for a barometric column of impure mercury extending into the lower part of said reservoir, a vaporizing zone provided by flaring the upper end of said inner tube into the outer of said concentric tubes, a heat providing means adjacent to and exterior of said vaporizing zone, a vapor condensing chamber positioned above and connecting with said vaporizing zone, a collecting well in said vapor condensing chamber, an outlet conduit from said well connecting with a discharge barometric column of distilled mercury, an intermediate concentric tube positioned between the inner and the outer of said concentric tubes forming thereby an annular space around said inner tube for said discharge mercury column, a pocket formed by connecting said inner and said outer concentric tubes at their lower ends within said reservoir, said intermediate concentric tube projecting into said pocket such that said annular discharge column feeds

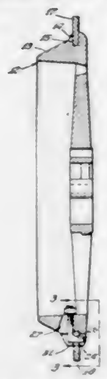
around the bottom submerged end of said intermediate tube, and a drawoff spout from the side of said outer tube at a point above said submerged end of said intermediate concentric tube.

2,450,099

PROCESS FOR THE CONDENSATION OF AN ARYLALKANE IN THE PRESENCE OF LEAD ALKYL

Ralph B. Thompson, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

No Drawing. Application November 23, 1945, Serial No. 630,558
8 Claims. (Cl. 260—668)



1. A process for producing a polyarylalkane which comprises contacting an arylalkane having a hydrogen atom attached to a carbon atom adjacent to the aromatic ring with a lead alkyl, in which all valences of the lead atom are satisfied by alkyl groups, at a temperature of from about 0° C. to about 300° C. for a time sufficient to decompose said lead alkyl and to form a condensation product from at least two molecular portions of said arylalkane, and thereafter separating from the reaction mixture the solid decomposition products of said lead alkyl.

2,450,100

WHEEL CONSTRUCTION

Wayne G. Toland, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey

Application September 21, 1946, Serial No. 698,524
7 Claims. (Cl. 301—87)

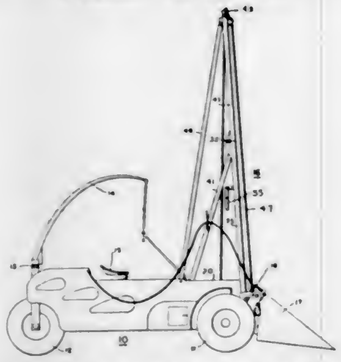
1. In a wheel, a rim having radial openings and a circumferential groove transversely spaced from the openings, a removable annular member comprising at least two segments adapted to fit within said groove, said annular member having transverse openings positionable adjacent the openings in the rim, and a latch member pivotally seated in each rim opening and having an angled portion adapted to be received in the adjacent opening in the annular member.

2,450,101

MATERIAL FOR USE IN THE MANUFACTURE OF EAR DEFENDERS AND THE LIKE

Paul S. Veneklasen and Norman A. Watson, Los Angeles, Calif., assignors to the United States of America

No Drawing. Application June 26, 1942, Serial No. 448,587
2 Claims. (Cl. 260—23.7)



1. A composition of the class described comprising the following materials in the following proportions by weight: 100 parts polychloroprene, 4 parts magnesia, 1.5 parts stearic acid, 0.5 part diorthotolylguanidine salt of dicatechol borate, 12 parts titanium dioxide, 3 parts paraffin, 20 parts lanolin, and 1 part zinc oxide.

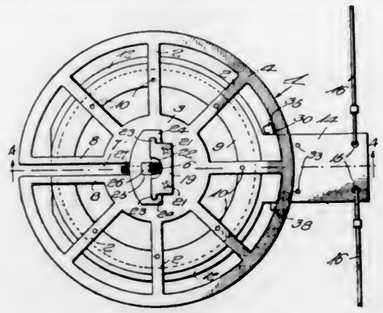
2,450,102

MATERIAL LIFTING AND TRANSPORTING VEHICLE

Harold A. Wagner and Gustave H. Wagner, Portland, Oreg.

Application August 18, 1945, Serial No. 611,298
3 Claims. (Cl. 214—120)

1. In an apparatus of the class described, the combination comprising a vehicle body, metal plates defining a pair of relatively high vertical side walls for said body, a metal plate defining a relatively high forward wall for said body and welded along its opposite side edges to said side walls for spacing them rigidly apart, an elevator tower structure on the forward end of said body, said tower structure including a lower section rigidly secured to said body and an upper section hingedly mounted on the upper end of said lower section for rearward folding movement, load lifting means mounted on said tower structure for vertical longitudinal movement thereupon, said tower sections each including a pair of spaced apart parallel angle iron members defining tracks for said load lifting means, the forward flanges of said angle iron members extending in a common plane, the other flanges of said members extending rearwardly from said plane with respect to said body, said rearwardly extending flanges of said members of said lower section being rigidly welded to the outer surfaces of said side walls adjacent the foremost end of said body throughout the full height of said side walls, a pair of braces extending between rearward portions of said side walls and the uppermost end of said upper tower section for holding said angle iron members thereof in an aligned relation with respect to said members of said lower section, said braces being adjustable to permit rearward folding of said upper section.



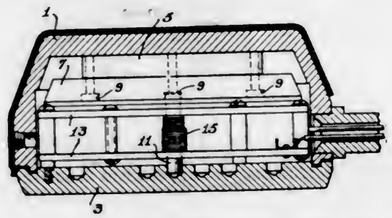
2,450,103

SUCKER ROD BACKOFF WHEEL

Frank Austin, Long Beach, Calif.

Application September 13, 1945, Serial No. 616,116
2 Claims. (Cl. 255—35)

2. A tool for backing off sucker rods comprising a wheel having a hub and a rim and spokes extending between the hub and the rim, there being an opening at the center of the hub and a slot leading from the outer edge of the rim to the opening in the hub, a collar carried by said wheel concentric thereto and formed with a slot registering with the slot of the wheel, a ring fitting about said collar for rotatably mounting the collar and the wheel, said ring being formed with a slot for registering with the slots of the collar and the wheel and allowing sucker rods to be passed inwardly through the slots and into the opening in the hub and dispose the wheel about a sucker rod concentric thereto, a stationary jaw carried by said hub and formed with a recess registering with the opening in the hub for receiving a portion of a sucker rod, flanges extending from opposite ends of said stationary jaw, a block fitting against the recessed side of said stationary jaw and formed with hooked end portions engaging about the flanges of the stationary jaw and with a recess registering with the recess of the stationary jaw, a key extending vertically through the recess of the block and having a toothed side face for gripping a sucker rod, a set screw threaded through an opening in said block with its inner end abutting said key for forcing the key into gripping engagement with the sucker rod, and means allowing rotation of the wheel in a direction for backing off sucker rods and releasably holding the ring against uncontrolled retrograde rotation.

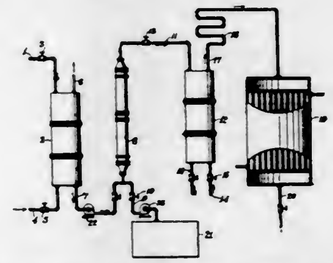


2,450,104

ELECTROACOUSTICAL TRANSDUCER

Loy E. Barton, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application November 30, 1942, Serial No. 467,458
1 Claim. (Cl. 177—386)



In an electro-acoustical transducer, the combination of a casing, a vibratory diaphragm of magnetic material carried by said casing at one end thereof, a single magnet element comprising a plate mounted within said casing in spaced substantially parallel relation to said diaphragm at the opposite end of the casing, a plate of magnetic material interposed between said magnet element and said diaphragm and being spaced from said diaphragm in opposed relation thereto, said magnet plate being of the order of the size of the plate of magnetic material, and a plurality of magnetostrictive elements secured to said diaphragm at spaced points thereon, said plate being provided with a plurality of recesses therein corresponding in number to the number of said elements, and said elements extending from said diaphragm into said recesses a distance short of the depth thereof, there being also a slight clearance between said elements and the surfaces of said plate defining said recesses.

2,450,105

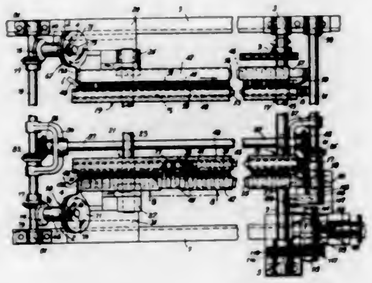
PROCESS FOR OBTAINING NITROGEN TETROXIDE

George Washington Batchelder, Mantua, and Albert W. Hawkins, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application February 13, 1943, Serial No. 475,724
11 Claims. (Cl. 23—159)

8. The method for obtaining nitrogen tetroxide in relatively pure form which comprises bringing nitrogen oxides into contact with sulfuric acid of between approximately 70 and 95% strength, introducing the resulting mixture into a preheater, passing nitric acid of between approximately 30 and 60% strength into said preheater, introducing the mixture thereby formed into a denitrating tower passing steam countercurrent to the aforesaid mixture and in direct heat exchange therewith, condensing and refluxing the evolved nitric acid and water vapors into said tower causing said nitric acid to react with and oxidize the NO present to nitrogen tetroxide while simultaneously becoming reduced itself to nitrogen tetroxide, subsequently condensing the evolved nitrogen tetroxide and liquefying and separating the same.

2,450,106



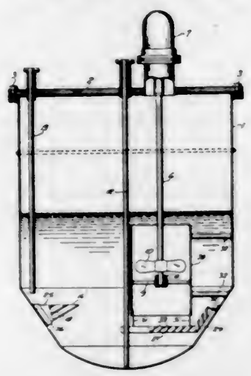
PIVOTED LUG CONVEYER

Farwell G. Bemis, Brookline, Mass., and Robert E. Pierce, Seattle, Wash., assignors to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri

Application June 8, 1946, Serial No. 675,460
12 Claims. (Cl. 198—170)

3. A conveyor comprising an endless chain, means for driving the chain with substantially constant speed along upper and lower reaches, laterally swingable lugs mounted in succession on said chain, means providing a slot along the upper reach of the chain into which any of said lugs may be turned, cyclic trip means at the inlet end of said slot adapted to turn lugs therein, means in the outlet end of the slot for returning said lugs to their initial positions relative to the

chain, means including a change gear for varying the period of the cyclic action of said trip means, an adjustable variable-speed drive for the trip means, means whereby adjustments of said variable-speed drive effect accommodation of various change gears, whereby a substantially

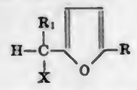


constant tripping action of the trip means is maintained irrespective of the timing of the cycle thereof, said trip means being arranged so as to have a component of motion along the direction of lug motions where they enter the slot, said component of motions and said lug motions being substantially equal under all adjustments.

2,450,107
MIXING VESSEL AND DEFLECTOR THEREFOR

Fred D. Bostwick, Thiensville, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

Application May 21, 1945, Serial No. 594,965
4 Claims. (Cl. 259—97)



1. In a vessel for mixing and agitating materials, means to stir the contents of the vessel, and a deflector disposed in the flow stream of the materials and comprising a frame formed of four outer members joined together and a pair of cross pieces extending diagonally from opposite corners of said frame and intersecting centrally of the frame, a plurality of louvers spaced apart and extending between said cross pieces to divide the deflector into four triangular segments, and means secured to the louvers of each segment to locate the louvers at various predetermined angles of deflection.

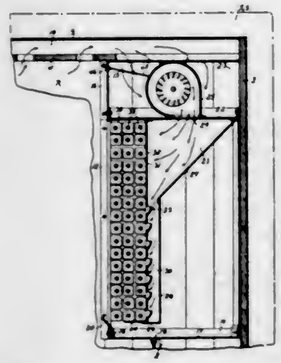
2,450,108
PRODUCTION OF HETEROCYCLIC COMPOUNDS

John George Mackay Bremner and David Gwyn Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application November 15, 1945, Serial No. 628,997. In Great Britain December 11, 1944
15 Claims. (Cl. 260—345)

1. A process for the production of a compound having the general formula

which comprises reacting a compound having the general formula

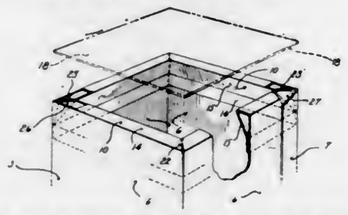


in the presence of a dehydrating agent selected from the group consisting of zinc chloride, phosphoric acid, concentrated hydrochloric acid and aluminum chloride, with a hydrogen halide and an aldehyde having the general formula R_1CHO, where in said formulae R is a carboxyl ester group, X is a halogen, and R_1 is a substituent taken from the group consisting of hydrogen and alkyl.

2,450,109
WALK-IN REFRIGERATOR COOLED BY A FORCED AIR CIRCUIT

Clinton C. Brinkoeter, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas

Application August 28, 1946, Serial No. 693,523
7 Claims. (Cl. 62—102)

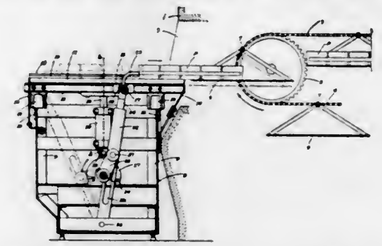


1. In a walk-in cooler having a room bounded by a top wall, side and end walls and a floor, and having a perforated ceiling spaced from said top wall to provide an air duct, the improvement which comprises: an air-cooling and circulating unit located in one corner of the room adjacent said ceiling and above said floor, said unit including a blower and motor chamber in communication with said air duct and a cooling chamber below said blower and motor chamber, a motor-driven blower in said blower and motor chamber, the blower receiving air from said blower and motor chamber and forcing it down into said cooling chamber, and means in said cooling chamber for cooling the air passing through said cooling chamber and passing the air into said room.

2,450,110
CONSUMER TYPE CONTAINER

Lewis C. Brooks, Milwaukee, Wis., assignor of one-third to Ira Milton Jones, River Hills, Wis.

Application October 2, 1947, Serial No. 777,404
3 Claims. (Cl. 229—37)

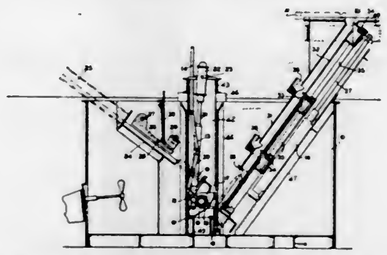


2. In a container having an upright substantially flat-sided body made by folding a single blank of flexible sheet material on appropriate score lines: a hollow end closure supporting rim extending entirely around one end of the body and projecting in from the sides thereof, said rim comprising three articulated strips integral with the side walls of the body and defined therefrom by score lines extending across the entire blank from which the body is formed transversely to the score lines defining the side walls from each other, the outermost of said strips on the rim being adhered flatwise onto the inner surfaces of the side walls a distance inwardly of said end of the body, the innermost of the strips being bent inwardly over said end of the body to provide a relatively flat ledge on the ends of the side walls substantially perpendicular thereto and flush with said end of the body, said innermost strip having substantially triangular cutouts adjacent to the body corners separating the strip into ledge sections, one for each side wall of the body, said cutouts facilitating folding of the rim around the corners of the body and producing mitered joints between the adjacent ends of the ledge sections at the corners of the body, and the intermediate one of said strips being unbroken for its entire length and connecting diagonally between the outermost of the strips and the overhanging edges of the ledge sections to reinforce the same; and upright pleat-like portions on said diagonal intermediate strip, separated from the ledge by the cutouts therein, and folded flatwise together to project inwardly into the hollow rim at the corners of the body, the edges of the pleat-like portions defined by one side of said cutouts engaging the undersides of the ledge sections so that said pleat-like portions close the rim at the interior of the body.

2,450,111
OVEN FEEDING MACHINE

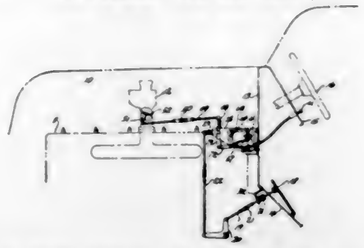
Robert L. Brosemer, Sacramento, Calif.

Application December 11, 1946, Serial No. 715,383
12 Claims. (Cl. 107—57)



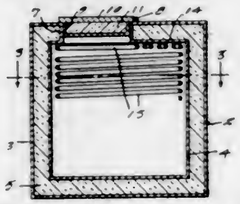
1. Oven feed mechanism comprising an upstanding frame, a baking pan unit supporting table on the frame, and power driven feed mechanism mounted on the frame arranged to engage a supported pan unit and advance the latter from the table in a predetermined direction; the table being longitudinally slotted, and said mechanism including an upstanding, telescopic swing arm pivotally mounted for swinging motion in a longitudinal vertical plane, power means operative to reciprocate the swing arm, a pusher element, means mounting the pusher element for guided cyclic movement through a path comprising a raised advancing stroke and a lowered retracting stroke, the pusher element projecting through the slotted table for pan unit engagement on the advancing stroke and being disposed under the table on the retracting stroke, and means operatively connecting the pusher element and swing arm so that reciprocation of the latter recurringly advances and retracts the pusher element.

2,450,112
QUENCHING AND CONVEYING APPARATUS



Robert E. Buckholdt, Salem, Ohio, assignor to The Salem Engineering Company, Salem, Ohio, a proprietorship

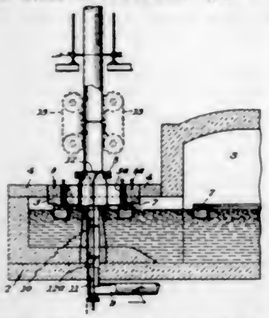
Application February 13, 1943, Serial No. 475,780
2 Claims. (Cl. 134—133)



1. Apparatus of the character described comprising in combination a downwardly inclined trough, a rotatable transfer device arranged to receive objects from said trough, means comprising a brake shoe to decelerate said objects before they reach said device, an upwardly inclined trough extending from a position adjacent said device, said device including means to impinge a stream of liquid onto said objects and being operative to position said objects on said upwardly inclined trough, a removable frame mounting said device, a cylinder on said frame for rotating said device, an elongated slide positioned below said last mentioned trough and mounted for reciprocating movement parallel with said last mentioned trough, means comprising a fluid pressure cylinder positioned below said slide to reciprocate the same, a plurality of spaced retractable dogs carried by said slide and operative during upward movement of the same to advance said objects along said last mentioned trough, and a plurality of retractable latches fixed with respect to said last mentioned trough and adapted to retain said objects in advanced positions whereby said objects may be advanced therealong in step by step progression.

2,450,113
SPEED CONTROL DEVICE FOR MOTOR VEHICLES
Paul J. Burchett, Glendale, Calif.
Application May 9, 1945, Serial No. 592,903
11 Claims. (Cl. 180—82.1)

4. A speed control device for a motor vehicle having a foot-operated accelerator and a throttle valve in the carburetor thereof for varying the fuel supplied to the motor of said vehicle comprising a shaft; means for rotatably mounting the shaft on said vehicle; means made operative by actuation of said accelerator for rotating the shaft when said accelerator is actuated; means movably mounted on said vehicle and activated by gravity and momentum; means interconnecting said last-named means and said shaft whereby the latter is rotated in accordance with changes in the position and momentum of said vehicle; means for operating the valve upon rotation of said shaft; and means for rendering said interconnecting means inoperative to rotate said shaft during operation of said first-named shaft-rotating means.

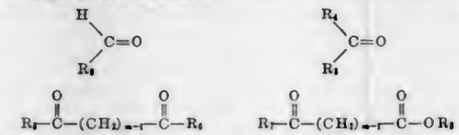


2,450,114
REFRIGERATING APPARATUS FOR COLD STORAGE CABINETS
Milton Burney, Austin, Tex.
Application July 27, 1945, Serial No. 607,325
2 Claims. (Cl. 62—89)

1 A cold storage cabinet comprising top, bottom and side walls, an aperture in a portion of the top wall, a closure for closing the aperture, cooling coils lining the unapertured portion of the top wall and upper half of the side walls for conducting a refrigerant from a refrigerating space of higher to one of lower temperature, the bottom portion of the chamber of the cabinet providing an unoccupied space for items to be refrigerated.

2,450,115
DIE DRAWING OF HOLLOW GLASS BLANKS
Clarence P. Byrnes, Fort Lauderdale, Fla.
Application August 20, 1943, Serial No. 499,433
6 Claims. (Cl. 49—17.1)

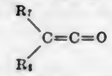
1. In apparatus for forming hollow glass blanks, a receptacle for a molten glass bath, means for drawing hollow glass upwardly from a glass bath therein, a relatively stationary shaping and sizing die having an interior surface corresponding to the desired external shape of the hollow glass blanks and through which the hollow glass is drawn, said die being arranged to deflect the plastic walls of the hollow glass inwardly as



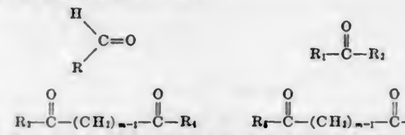
it is drawn upwardly, an internal stopper supported at a level at least as high as that of the external die and arranged to coact with the inner surface of the shaped and sized hollow glass to hold distention air pressure therein below the stopper level, and means for continuously supplying distention air at a level below the stopper.

2,450,116
PREPARATION OF BETA-LACTONES
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 23, 1947, Serial No. 763,149
19 Claims. (Cl. 260—344)

1. A process for preparing β-lactones which comprises reacting at temperature of from —40° C. to 50° C. a ketene having the formula:



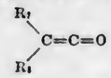
wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl (C_6H_5—) group, with a carbonyl compound selected from the group represented by the four general formulas:



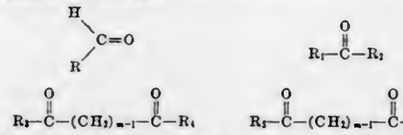
wherein R_2 represents a member selected from the group consisting of a hydrogen atom, an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a benzyl group, a β-phenylethyl group, and a phenyl group (C_6H_5—), R_3 and R_4 each represents a member selected from the group consisting of an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a benzyl group, a β-phenylethyl group and a phenyl (C_6H_5—) group, R_5, R_6, R_7 and R_8 each represents an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4 and m represents a positive integer from 1 to 3 in the presence of a catalyst selected from the group consisting of zinc, copper, calcium, cadmium, magnesium, cobalt, nickel, stannous tin, and ferric perchlorates.

2,450,117
PREPARATION OF β-LACTONES
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 23, 1947, Serial No. 763,150
20 Claims. (Cl. 260—344)

1. A process for preparing a beta-lactone which comprises reacting at a temperature of from —40° C. to 50° C. a ketene having the formula:



wherein R_7 and R_8 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl (C_6H_5—) group, with a carbonyl compound selected from the group represented by the four general formulas:

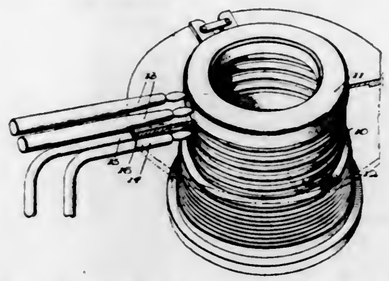


wherein R represents a member selected from the group consisting of a hydrogen atom; an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a beta-phenylethyl group; and a phenyl (C_6H_5—) group, R_1 and R_2 each represents a member selected from the group consisting of alkyl groups having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a beta-phenylethyl group; and a phenyl (C_6H_5—) group, R_3, R_4, R_5, and R_6 each represents an alkyl group having the formula C_nH_{2n+1}, wherein n is a positive integer from 1 to 4, and m represents a positive integer from 1 to 3, in the presence of zinc thiocyanate.

2,450,118
PREPARATION OF β-LACTONES
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 23, 1947, Serial No. 763,151
19 Claims. (Cl. 260—344)

1. A process for preparing a beta-lactone which comprises reacting at a temperature of from —40° C. to 50° C. a ketene having the formula:

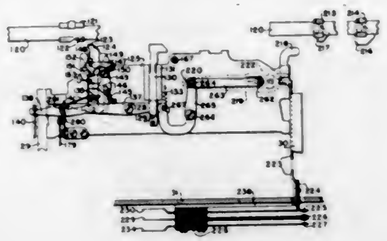
where R_7 and R_8 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl (C_6H_5—) group, with a carbonyl compound selected from the group represented by the four general formulas:



wherein R represents a member selected from the group consisting of a hydrogen atom; an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a beta-phenylethyl group; and a phenyl (C_6H_5—) group, R_1 and R_2 each represents a member selected from the group consisting of alkyl groups having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a beta-phenylethyl group; and a phenyl (C_6H_5—) group, R_3, R_4, R_5, and R_6 each represents an alkyl group having the formula C_nH_{2n+1}, wherein n is a positive integer from 1 to 4, and m represents a positive integer from 1 to 3, in the presence of zinc nitrate.

2,450,119
ISOMERIZATION OF PINENE TO CAMPHENE
William F. Carson, Jr., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 21, 1943, Serial No. 495,644
5 Claims. (Cl. 260—675.5)

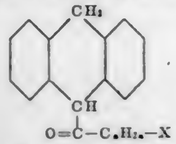
1. The process of isomerizing a pinene to camphene which comprises heating a pinene at a temperature between about 85° C. and about 200° C. for about ten minutes to about eight hours in the presence of pyrophyllite, the ratio of pyrophyllite to said pinene being between about 0.01 and about 0.10.



2,450,120
METHOD AND APPARATUS FOR BONDING THIN SECTIONS TO HEAVIER MEMBERS
Paul E. Cate, Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application September 27, 1944, Serial No. 556,010
8 Claims. (Cl. 113—59)

3. In a method of soldering, brazing or welding a metal of relatively thin section to a metal of relatively thick section, applying a heating flame to the metal of relatively thick section while confining the flame against spreading to the metal of relatively thin section and subjecting the metal of thin section in immediate adjacency to the area heated by said heating flame to a fluid having a temperature on the order of low pressure steam by applying thereto jets of air and steam to retain the thin metal at a temperature below that at which said thin metal is annealed.

5. In an apparatus for soldering, brazing or welding a bellows of relatively thin metal to a member of relatively thick metal, the combination of a torch for impinging a heating flame directly on the relatively thick member, a baffle adjacent said torch and on the side thereof toward the bellows to prevent spreading of the torch flame, and at least one nozzle adjacent said baffle but on the opposite side thereof from said torch for applying a jet of fluid whose temperature is on the order of the temperature of low pressure steam to the bellows metal.



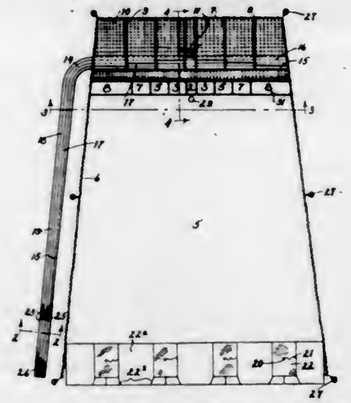
2,450,121
ACCOUNTING MACHINE
Raymond A. Christian, Jesse R. Ganger, and William L. Paden, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application February 22, 1945, Serial No. 579,270
5 Claims. (Cl. 235—3)

1. In a machine of the class described, having a balance totalizer capable of balance and/or sub-balance operations, and recording means positioned thereby to record balances and sub-balances, said machine also having a laterally shiftable traveling carriage for supporting record material, said carriage positionable in various columnar positions to present corresponding columnar portions of said record material to the recording means, the combination of means to initiate a balance operation; means used in conjunction with the balance initiating means to initiate a sub-balance operation; a separate solenoid to operate each of the initiating means; a selectively operable switch to connect the solenoids to a source of electrical energy; means to urge the carriage in a tabulating direction; means normally effective to restrain the carriage against tabulating movement; stops on the carriage located in relation to the various columnar positions thereof; means coacting with the stops to locate the carriage in its various columnar positions, said means normally out of coacting relationship with said stops; means to release the restraining means and to simultaneously move the locating means into coacting relationship with the stops to cause the carriage to tabulate from one columnar position to another; a member located on the carriage in relation to the balance columnar position thereof; a member located on the carriage in relation to the sub-balance columnar position thereof; an element coacting with the members; a part coacting with the switch; means forming a variable connection between the element and the part to move said element from a normally ineffective position into coacting relationship with the members and vice versa; and means operated by the releasing means, upon its movement to release the restraining means, to vary the connecting means to move the element into coacting relationship with the members, so that movement of the carriage to balance columnar position will cause the corresponding member to actuate the selectively operable switch in such a manner as to energize the balance solenoid, to initiate an automatic balance operation in which the balance is recorded in the balance column of the record material, or alternately, so that movement of the carriage to sub-balance columnar position will cause the corresponding member to actuate the selectively operable switch in such a manner as to energize both the solenoids to initiate an automatic sub-balance operation, in which the sub-balance is recorded in the sub-balance column of the record material.

2,450,122
AMINOALKYL-9,10-DIHYDROANTHRYL KETONES
John W. Cusic, Skokie, Ill., assignor to G. D. Searle & Co., Skokie, Ill., a corporation of Illinois
No Drawing. Application July 12, 1946, Serial No. 683,145
6 Claims. (Cl. 260—293)

1. New compositions of matter useful as therapeutic agents consisting of aminoalkyl 9,10-dihydroanthryl ketones of the formula

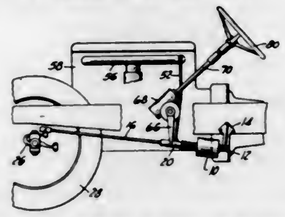
and salts thereof with acids, in which n stands for an integer between 1 and 5, and in which X is chosen from the class consisting of monoalkylamino, dialkylamino, N-piperidino and N-morpholino groups.



2,450,123
WHEAT GERM PREPARATION
Max P. Cryns, Kansas City, Mo., assignor, by mesne assignments, to Ira Milton Jones, Milwaukee, Wis.
No Drawing. Application April 19, 1939, Serial No. 268,730
6 Claims. (Cl. 99—153)

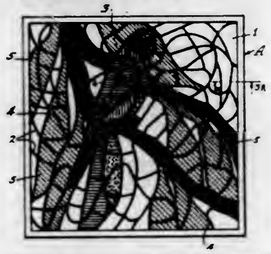
3. A stabilized wheat germ preparation containing a small proportion of milk-solids-not-fat and a large proportion of wheat germ on their solids weight basis, said wheat germ and milk-solids-not-fat having been heated during processing and while in a dispersed aqueous condition to a temperature of at least 200° F. whereby the preparation is substantially stabilized against oxidative deterioration.

2,450,124
POLYHYDRIC ALCOHOL ESTERS
Melvin De Groote, University City, and Arthur F. Wirtel, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Original application July 13, 1945, Serial No. 604,993. Divided and this application November 5, 1946, Serial No. 707,978
8 Claims. (Cl. 260—405)



1. An acidic partial ester containing: (*a*) at least one polyhydric alcohol radical; (*b*) at least one diglycollic acid radical; and (*c*) a plurality of acyloxy radicals, each having 8 to 32 carbon atoms derived from any detergent-forming monocarboxy acid having 8 to 32 carbons atoms, with the proviso that at least one of said acyloxy radicals is the acyloxy radical of an hydroxylated detergent-forming monocarboxy acid having 8 to 32 carbon atoms, each of said polyhydric alcohol radicals being ester-linked with a plurality of groups, each of said groups contains at least one of said acyloxy radicals, the number of said groups ester-linked to each polyhydric alcohol radical being at least equal in number in each instance to the valency of the polyhydric alcohol radical, so that each polyhydric alcohol radical is completely esterified and being additional to the number of such groups ester-linked to any other polyhydric alcohol radical contained in the ester, and at least one of said groups containing a free diglycollic acid radical.

2,450,125
GAME APPARATUS
H. Calvin Dunfee, Miami, Fla.
Application February 20, 1946, Serial No. 648,954
6 Claims. (Cl. 273—35)

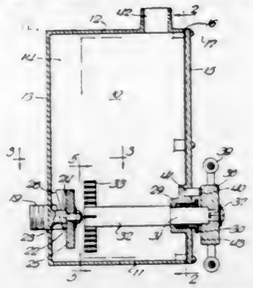


2. A game apparatus of the character described comprising a playing field, a rear wall net the lower portion of which is forwardly curved toward the horizontal, a multiple channel trough extending transversely across the net structure, a plurality of fore and aft short nets forming a plurality of forwardly facing net pockets across the rear of the net structure one of which is centrally disposed, there being at least three of said pockets in addition to the central one upon each side of the central pocket and the forwardly curved portion of the rear wall net constituting a bottom for all of said pockets, means for connecting the two pockets upon the opposite sides of the central one to one of the channels of the trough, means for connecting the next outermost pockets upon each side of the central one with another channel of the trough, means for connecting the two outermost pockets with a third channel of the trough and means for connecting the central pocket with a fourth channel of the trough, an overhead support for the fore and aft short nets, said short nets being connected at their bottoms to the forwardly curved portions of the rear wall net and constituting a support for the same.

2,450,126
FLUID POWER STEERING MECHANISM
Delbert P. Fisher, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 30, 1945, Serial No. 591,111
1 Claim. (Cl. 180—79.2)

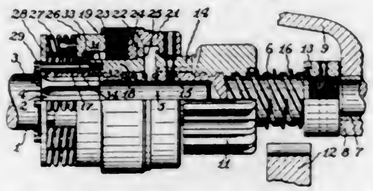
A power steering mechanism for a motor vehicle including a pitman arm, a drag link, force transmitting means interconnecting said pitman arm and drag link including a hollow fitting fixedly secured to said link, said fitting including a port adapted to receive a power fluid transmitting conduit, a plurality of force transmitting members housed within said fitting, said members including a two-part fitting, one of said parts having fluid transmitting ducts therein, one of said ducts registering with the aforementioned port in the hollow fitting, and further including a spring interposed between one end of the two-part fitting and one end of the hollow fitting and another spring interposed between the other end of the two-part fitting and the other end of the hollow fitting, a double-acting pressure differential operated motor including a cylinder member and a piston, a hollow connecting rod interconnecting said piston with the aforementioned hollow fitting, valve means, including two relatively movable parts, for controlling the operation of said motor, said valve means being housed within said cylinder member, a hollow rod housed within said connecting rod and connected at one of its ends to one of the valve parts and at its other end to one part of said two-part fitting to provide a fluid connection between the hollow rod and the other of said ducts, the parts of the aforementioned mechanism being so constructed and arranged and so operative that a movement of the pitman arm results in a compression of one or the other of the aforementioned springs to effect an operation of the valve if the resistance to movement of the drag link is of such a magnitude as to make possible said operation of said spring.

2,450,127
ART DEVICE
Harry J. Gardener, Los Angeles, and Walter Alford Blome, South Pasadena, Calif.
Application May 10, 1944, Serial No. 534,958
3 Claims. (Cl. 35—28)



1. An art device comprising a supporting member having a flat surface with a plurality of intersecting raised ribs defining zones of different shapes, a visible picture provided on the flat surface, and colored pieces having shapes similar to the zones and being receivable therein for covering the visible picture and for forming a new picture.

2,450,128
MIXING VALVE
Gordon R. Gemmell, Portland, Oreg.
Application June 7, 1946, Serial No. 675,066
1 Claim. (Cl. 236—12)



In a device of the class described the combination of a compartment having a pair of inlet openings extending through one side thereof, said opening having the outlet ends thereof inclined with relation to the axes of the openings, a rocker plate having inclined faces formed thereon adapted to form closures for the respective openings when said plate is rocked to either extreme position, a rock shaft journaling in said container having a hand wheel thereon for rotating same, said hand wheel having a detent for

yieldably holding same in a pre-determined position and a thermostatic element connected to said rock shaft and to said rocker plate whereby a change of temperature in said compartment

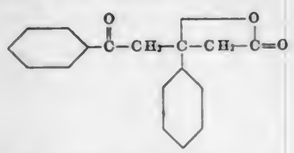
will produce a corresponding movement in said rocker plate and a lowering temperature in said compartment will open the hot water inlet and close the cold water inlet.

2,450,129
ENGINE STARTER GEARING
Vernon E. Gleasman, Elmira, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application July 1, 1946, Serial No. 680,535
3 Claims. (Cl. 74—7)

1. In an engine starter drive, a power shaft, a screw shaft, a pinion having a threaded connection with the screw shaft, a driving member non-rotatably mounted on the power shaft having an axially extending cam projection, a driven member slidably journalled on the power shaft having a cooperating axial cam, a plurality of driving clutch discs splined on the driven cam member, the driven cam member having a flange providing an abutment for the discs, a barrel member non-rotatably connected to the screw shaft, a plurality of driven clutch discs splined in the barrel, a thrust ring pressing the clutch discs toward said abutment, a plurality of compression springs bearing on the thrust ring, a backing plate for the springs, and means for drawing the backing plate toward the driven cam member, said driving cam member having a flange engaging the thrust ring to relieve the pressure of the thrust ring on the clutch discs when the cam members are wedged apart by the transmission of torque therethrough.

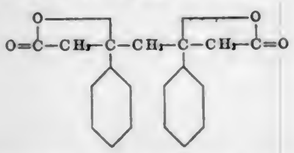
2,450,130
ELECTRICAL DEVICE HAVING GLASS-TO-METAL SEAL
Ronald Gordon, San Carlos, and Harold Miller, San Bruno, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application September 24, 1945, Serial No. 618,350
3 Claims. (Cl. 250—27.5)

1. An electrical device comprising an evacuated envelope including a section of glass sealed along an edge to a metallic member, said member forming part of the envelope wall and having its major surface portion exposed and with only a narrow portion underlying the glass at the seal, said member being composed mainly of a material having an expansion characteristic similar to that of said glass, a band-like sealing layer



of metallic oxide stable in a reducing atmosphere on only that narrow portion of the member which underlies the glass, and a surface layer on said exposed portion of a low resistance metal whose oxide is reducible in said atmosphere, said last mentioned layer extending under said sealing layer.

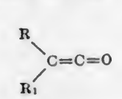
2,450,131
PROCESS FOR PREPARING β-LACTONES
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 17, 1946, Serial No. 716,873
13 Claims. (Cl. 260—344)



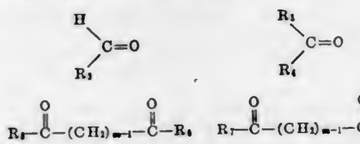
5. A process for preparing β-propionolactone comprising reacting ketene ($CH_2=C=O$) with formaldehyde, in the presence of from about 0.1 to about 3% of the weight of the material in the reaction mixture of triethyl orthophosphate, at a temperature below 50° C.

2,450,132
PREPARATION OF β-LACTONES
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 12, 1947, Serial No. 760,699
22 Claims. (Cl. 260—344)

22. A process for preparing a mixture of monolactone having the formula:



and a dilactone having the formula:

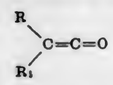


which comprises passing gaseous ketene into a vigorously stirred solution of dibenzoyl methane having dissolved therein from 0.1% to 0.5% by weight, based on the dibenzoyl methane, of boron trifluoride etherate, continuing the passage of the ketene into the solution until substantially all the dibenzoyl methane has reacted while maintaining the temperature at from −70° C. to +50° C., thereafter neutralizing the catalyst with a solution of a weak alkali, and separating the lactone mixture from the residue.

2,450,133
PROCESS FOR PREPARING LACTONES
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 12, 1947, Serial No. 760,700
16 Claims. (Cl. 260—344)

1. A process for preparing β-lactones comprising reacting at a temperature of below 50° C. and not less than −50° C., a ketene selected from the ketenes represented by the following general formula:

wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl (C_6H_5—) group, with a carbonyl compound selected from the group represented by the four general formulas:



wherein R_2 represents a member selected from the group consisting of a hydrogen atom; an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a β-phenylethyl group; and a phenyl group, R_3 and R_4 each represents a member selected from the group consisting of alkyl groups having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4; a benzyl group; a β-phenylethyl group; and a phenyl group, R_5, R_6, R_7 and R_8 each represents an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, and m is a positive integer from 1 to 3, in the presence of at least one catalyst selected from the group of metal fluoroborates represented by the following general formula:

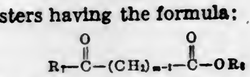
$$X(BF_4)_2$$

wherein X represents a divalent metal cation selected from the group consisting of cadmium, copper, iron, nickel, lead, stannous tin and zinc.

2,450,134
PREPARATION OF β-LACTONES
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 10, 1947, Serial No. 773,293
17 Claims. (Cl. 260—344)

1. A process for making beta-lactones which comprises reacting at a temperature of from −50° C. to +50° C. a ketene having the formula:

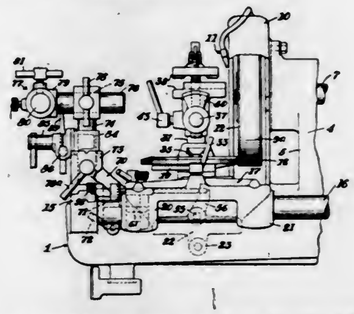
wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a methyl group, an ethyl group and a phenyl (C_6H_5—) group with a carbonyl-containing compound selected from the group consisting of aldehydes having the formula:



wherein R_2 represents a member selected from the group consisting of a hydrogen atom, an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a benzyl group, a beta-phenyl ethyl group, and a phenyl (C_6H_5—) group, ketones having the formula:

wherein R_3 and R_4 each represents a member selected from the group consisting of alkyl groups having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, a benzyl group, a beta-phenyl ethyl group and a phenyl (C_6H_5—) group, diketones having the formula:

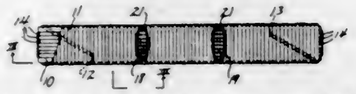
and ketoesters having the formula:



wherein R_5, R_6, R_7 and R_8 each represents an alkyl group having the formula C_nH_{2n+1} wherein n is a positive integer from 1 to 4, and m represents a positive integer from 1 to 3, in the presence of from 0.1–3% by weight, based on the total weight of the reaction mixture of a catalyst having the formula:

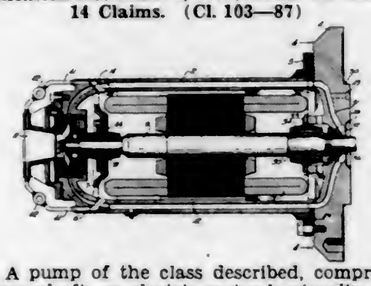
$$Hg(X)_2$$

wherein X represents a member selected from the group consisting of a chlorine atom and a bromine atom.



2,450,135
WORK SUPPORT ARRANGEMENT FOR GRINDING AND DRESSING MACHINES
Emil F. Hager, Queens Village, N. Y.
Application November 14, 1945, Serial No. 628,433
17 Claims. (Cl. 51—124)

1. In a work shaping apparatus having a spindle and a work shaping wheel carried thereby, a member rockable about an axis parallel to said spindle, said member having a portion coaxially disposed with respect to said axis, a post, a coupling element provided with a first sleeve receivable on said portion, means for securing said first sleeve in desired position thereon, a second sleeve disposed at right angles to said first sleeve to receive said post, and means to secure said post in desired position in said second sleeve, said post



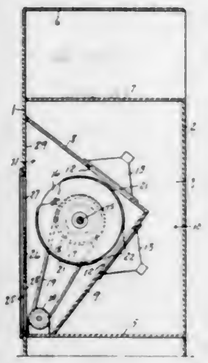
having a transverse opening therein, a work supporting means including a rod receivable through said opening and means for adjustably securing said rod to said post, whereby rocking movement of said member moves said work supporting means back and forth relative to the working surfaces of said wheel.

2,450,136
WRIST WATCH BAND
Robert L. Hamilton, Birmingham, Ala.
Application June 19, 1946, Serial No. 677,828
5 Claims. (Cl. 224—4)

5. An article of the character described comprising a spring metal band adapted to clasp the wrist, a wrapping for the band formed from a relatively flat continuous fillet of plastic material extending transversely about the band and having the ends thereof tucked under the wrapping at the ends of the band, a plurality of longitudinally extending fillets of plastic material enclosed by the wrapping and lying side by side flat against the band with the ends thereof extending over the ends of the band and turned back under the transverse wrapping, and loops in the longitudinal fillets extending through the wrapping for securing a watch thereto, said longitudinally extending fillets being formed from slowly stretchable material.

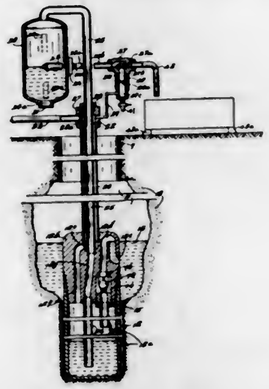
2,450,137
MULTISTAGE CENTRIFUGAL PUMP
Anatol J. Harlamoff, South Gate, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application December 1, 1944, Serial No. 566,044
14 Claims. (Cl. 103—87)

1. A pump of the class described, comprising a pump shaft, an electric motor having its rotor mounted on the pump shaft, a plurality of stages of impellers mounted on said shaft, a casing for said pump enclosing the motor and impellers and having an axial inlet opening at one end for fluid to be pumped, and a series of volutes each enclosing at least one impeller stage, said motor being disposed between different stages of impellers.



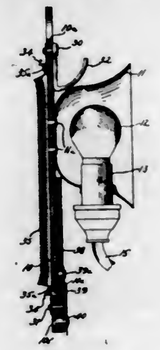
2,450,138
TAMPON APPLICATOR
Kenneth John Harwood, Neenah, Wis., assignor to International Cellucotton Products Company, a corporation of Delaware
Application October 5, 1945, Serial No. 620,478
2 Claims. (Cl. 128—263)

1. A tampon applicator comprising an elongated applicator tube of rounded cross-section adapted to have a tampon positioned within a portion of its length, and an elongated ejector tube also of rounded cross-section frictionally slidably fitting in said applicator tube and being movable lengthwise therein for ejecting such tampon, said ejector tube being split lengthwise from end to



end and having a flange extending inwardly of the tube from one of its edges at said split, said flange serving to provide a tampon engaging portion which is engageable with an end area of a tampon, which area is spaced from the periphery of the tampon on both sides of the flange.

2,450,139
TONE CABINET FOR ELECTRIC ORGANS
Baron Hartsough, San Francisco, Calif.
Application September 20, 1943, Serial No. 503,065
5 Claims. (Cl. 181—27)



1. A tone cabinet for an electric organ having a plurality of lateral side walls, a top wall and a bottom wall; one of said lateral side walls being formed with an opening therein; a pair of baffle boards extending convergently from points adjacent the upper and lower edges of said opening to meeting engagement at a point spaced from the lateral side of said cabinet that is opposite said opening; a pair of openings in said boards adjacent their engaging ends and a pair of cone-type loud speakers carried by said boards on their divergently facing sides coaxial with said openings respectively and disposed one above the other; a rotor tremulant revolvably supported within said cabinet between said opening and the said speakers and equally spaced from the latter; means for so supporting said tremulant for revolving about a horizontal axis; said speakers being directed toward said tremulant and arranged so that their axes will intersect each other at a point substantially on the axis of said tremulant, said tremulant being provided with baffles arranged for alternately deflecting the sound waves generated by said speakers upon revolving the said tremulant, and means for so revolving said tremulant.

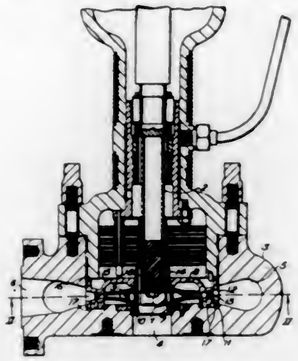
2,450,140
OIL WELL BLOWING APPARATUS
John Blackstock Hawley, Jr., Minneapolis, Minn., assignor to Northern Ordnance Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application October 23, 1944, Serial No. 559,970
11 Claims. (Cl. 103—234)

1. An apparatus for blowing an oil well having in combination, a member adjacent the oil supply having a chamber therein and an inlet opening for the entry of oil from said supply into said chamber, means for closing said opening by pressure in said chamber, a discharge conduit for oil extending into said chamber, a pipe through which air under pressure can be periodically supplied to said chamber for actuating said means, a vessel into which said oil is delivered from said discharge conduit and means for varying the effective capacity of said vessel to receive oil and thus to control the amount of oil which can be delivered to said vessel and thus the oil discharged from said chamber.

2,450,141
PORTABLE HAND LIGHT
John W. Hobbs, Springfield, Ill., assignor to John W. Hobbs Corporation, Springfield, Ill., a corporation of Illinois
Application August 19, 1947, Serial No. 769,463
3 Claims. (Cl. 240—8.18)

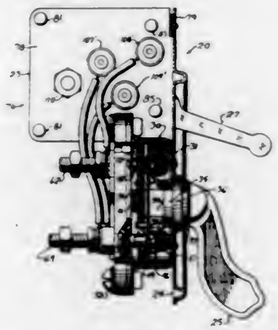
1. A portable electric lamp comprising an elongated base plate, a reflector secured to a medial portion of said base plate, means for supporting a light bulb within said reflector, a pair of pins transversely secured to said plate and respectively disposed on opposite sides of said reflector, a pair of hooks respectively secured to said pins on one face of said plate, an extensible strap secured between said hooks, a hanger pivotally secured to one of said pins on the other face of said plate, and a support stick pivotally secured to said other pin on said other face of the plate.

2,450,142
SLIP TUBE GAUGE FOR LIQUEFIED PETROLEUM GAS TANKS
John R. Holicer, Shreveport, La.
Application September 2, 1943, Serial No. 501,022
1 Claim. (Cl. 73—298)



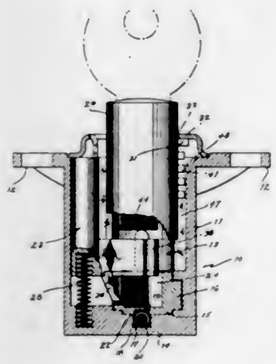
In a gage for liquefied petroleum gas tanks, a mounting adapted to carry a slidable tube; a tube movable through the mounting; a removable valve constructed to normally close the tube at its top and arranged to be partially opened to allow communication between the tube and an observation discharge port in the valve housing, the valve being constructed to be further opened to allow communication between the tube and the atmosphere through an opening as large as the diameter of the tube; a housing for the valve provided with a projection from its outer wall; a receptacle for the valve housing carried by the tube mounting and provided with means for engaging the projection when the housing is partially rotated in the receptacle, such engagement being reversible and arranged to hold the gage tube in its lowest normal position when the gage is not being operated to determine the contents of the tank; and a plug carried in the lower end of the tube and provided with a restricted orifice to afford constant communication between the tube and the tank and constructed to limit the volume of fluid discharged through the tube when the tube is fully opened at its upper end.

2,450,143
CENTRIFUGAL PUMP PROVIDED WITH DIFFUSER
Giles Philip Eliot Howard and Alexander Ivanoff, Luton, England
Application August 2, 1946, Serial No. 687,824
In Great Britain July 11, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires July 11, 1965
6 Claims. (Cl. 103—103)



1. In a centrifugal pump comprising a fixed pump casing and a pump impeller rotatably

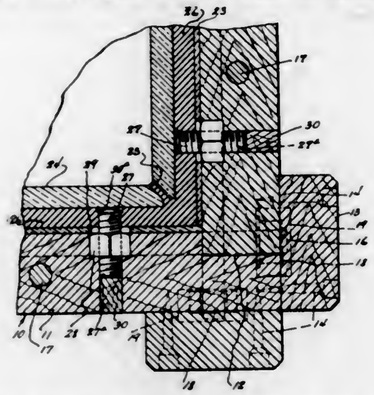
mounted within said casing, said impeller having a central axially open liquid intake and having means for ejecting the liquid radially outwardly therefrom, a stationary diffuser surrounding said pump impeller within said pump casing and



adapted to receive the ejected liquid, said diffuser being free to adjust itself relative to said pump casing and being biased against a fixed surface associated with said pump casing to hold the diffuser in position.

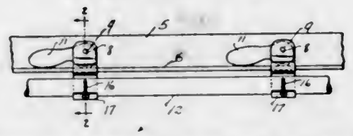
2,450,144
ELECTRICAL CONTROL INSTRUMENT
Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application March 11, 1943, Serial No. 478,763
9 Claims. (Cl. 200—6)

1. In a switch of the character described: a plurality of stationary contacts; cooperating movable contacts engageable with said stationary contacts; a carrier for the movable contacts for moving the same into and out of engagement with said stationary contacts; means mounting the movable contacts on the carrier for motion relative thereto toward and from the stationary contacts; resilient electrical conducting means at the side of the carrier remote from the stationary contacts for electrically connecting the movable contacts; and means for yieldingly pressing the movable contacts into engagement with the stationary contacts including a torsion spring supported by the carrier alongside said electrical conducting means and having its ends arranged to bear against the electrical conducting means adjacent to its connection with an adjacent pair of movable contacts, and cooperating abutments on the electrical conducting means and the movable contacts through which the torsional force of the spring reacts to yieldingly urge the movable contacts toward the stationary contacts.



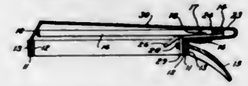
2,450,145
LATCH DEVICE
Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application October 7, 1946, Serial No. 701,679
12 Claims. (Cl. 292—166)

1. A latch device of the character described comprising: a body having a bore and a transverse slot communicating with the inner end of the bore; a sliding bolt in said slot spring urged to project therefrom for engagement with a keeper; a lever mounted in the body to rock about an axis parallel to the bore and to move bodily along said axis; a connection between the lever and the bolt whereby rocking movement of the lever in one direction retracts the bolt; an actuator slidable in the bore; a spring yieldingly urging the lever bodily toward and into engagement with the inner end of the actuator whereby said lever is bodily movable along its pivotal axis by depression of the actuator; and cam means reacting between the body and the lever for translating such bodily movement of the lever into rocking movement thereof in the direction to retract the bolt.



2,450,146
GLASS-LINED CONTAINER FOR CORROSIVE SUBSTANCES
Percy E. Knudsen, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Original application October 19, 1943, Serial No. 506,792. Divided and this application September 6, 1944, Serial No. 552,844
2 Claims. (Cl. 220—15)

2. A container structure comprising an outer reinforcing shell and a lining of glass plates disposed in the shell in spaced relation with respect to the shell, the space between the shell and the lining being filled with mastic, spacing screws threaded through nuts countersunk in the inner face of the shell and being operable from the exterior thereof and having points engaging the faces of the lining plates to hold them in predeter-

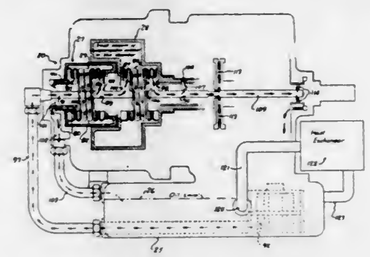


mined position with respect to the walls of the shell.

2,450,147
CABLE CLAMP
Richard T. Lawry, Richmond, Calif.
Application November 20, 1944, Serial No. 564,346
1 Claim. (Cl. 248—68)

A clamp for suspending cables from an angle iron or the like, comprising a V-shaped upper portion and an integrally formed U-shaped cable retaining portion positioned below said upper portion, the base of said U-shaped portion having an elongated flat configuration throughout the greater portion of its length and capable of supporting thereon a plurality of cables of varying diameters, an upwardly bent end provided on the base, a retaining element detachably secured to said bent end to retain the cables in a nested position and preventing accidental displacement of the cables from the base, a vertical extension formed on said upper portion, and a lever pivoted to the vertical extension and having a cam portion provided with a sharpened edge, said lever capable of being moved from a vertical position to a horizontal position to bring the cam portion thereof into locking engagement with the angle iron.

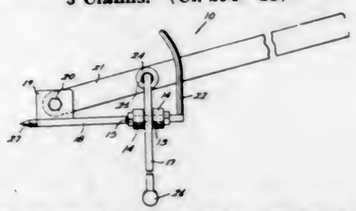
2,450,148
FOLDING UNIFORM CAP STAYER
Irving Libshutz and Harry Libshutz, Baltimore, Md.
Application February 27, 1947, Serial No. 731,358
3 Claims. (Cl. 2—185)



1. A cap comprising in combination, a frame formed to fit the head of a user, a cover section attached to said frame, a plate at the front of the frame for holding said cover and having a tongue for operating the plate so the cap will be selectively in open and collapsed positions, and means for holding the plate hingedly to said frame to facilitate the operation of said plate.

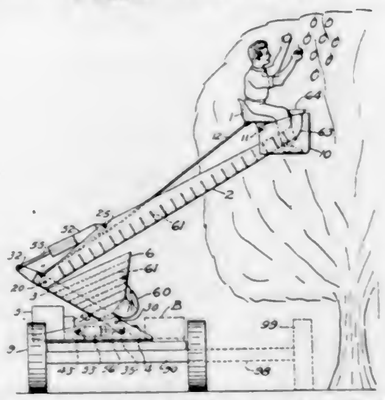
2,450,149
BLOCK GREASE COMPOSITIONS
Paul R. McCarthy, Allison Park, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application October 4, 1945, Serial No. 620,399
5 Claims. (Cl. 252—42.1)

3. An improved block grease possessing anti-charring and anti-glazing properties and having a low consumption factor comprising an intimate anhydrous mixture of about 50 per cent to about 80 per cent of a mineral oil of about 100 S. U. S. at 100° F. to about 500 S. U. S. at 100° F. and about 50 per cent to about 20 per cent of soap base, the said base comprising approximately equal quantities of a soap of a hydrogenated rosin of at least about 40 per cent saturation and a fatty acid soap, and a diarylamine in an amount sufficient to substantially inhibit oxidational deterioration.



2,450,150
PISTON FOR ROTARY ENGINES
Robert P. McCulloch, John L. Ryde, and Austin Gudmundsen, Milwaukee, Wis.; said Ryde and said Gudmundsen assignors to said McCulloch
Application June 14, 1945, Serial No. 599,488
7 Claims. (Cl. 121—49)

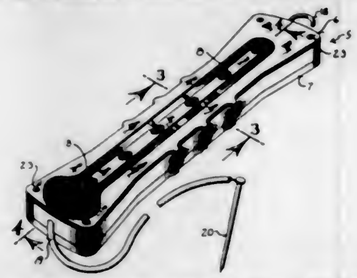
1. A piston member for rotary engines characterized by the fact that the piston member is of hollow construction being closed at its hub portion by a relatively thin circumferential wall formed of helical convolutions extending axially of the hub.



7. Means for cooling a hollow rotatable member having surfaces remote from its axis of rotation subject to intensive heating, comprising: circumferentially disposed means lying radially between said remote surfaces and the axis of rotation of said member providing a passageway through which a cooling medium is adapted to be circulated, one wall of said passageway being exposed on the hollow interior of said member; and a vaporizable coolant inside the hollow member adapted to be condensed and projected radially outwardly by said wall of the passageway as the result of centrifugal force during rotation of said member to impinge said heated remote surfaces and adapted to be vaporized by contact with said heated surfaces and recondensed upon recontacting said wall of the passageway with vaporization and condensing occuring continuously in an endless cycle.

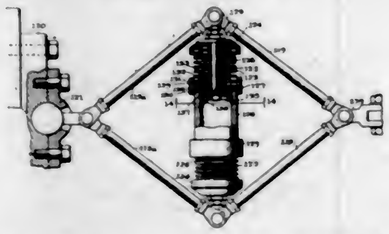
2,450,151
MECHANICAL GRIPPING TOOL
David H. McNaughton, Sr., Saskatoon, Saskatchewan, Canada, assignor of twenty-five per cent to Paul B. Mitchell, Saskatoon, Saskatchewan, Canada
Application April 10, 1947, Serial No. 740,621
3 Claims. (Cl. 294—15)

1. A device of the character described, comprising a fulcrum body, gripping arms pivotally mounted on the ends of said body, a pivot supporting member secured to said body in crossed right angular relation thereto, a pivot carried by said member, an applying bar carried by said pivot, seats arranged on the opposite sides of said bar receiving the upper ends of said arms for movement of said arms upon upward and downward movement of said bar and a U-shaped guide mounted on said pivot supporting member straddling said bar to guide said bar in upward and downward movement.



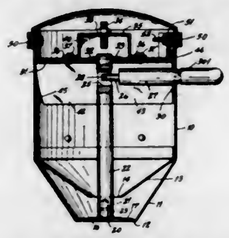
2,450,152
FRUIT PICKER'S CRANE
Howard B. Miller, Seattle, Wash.
Application January 5, 1946, Serial No. 639,254
9 Claims. (Cl. 214—83.1)

1. A fruit picker's crane, comprising a mobile platform, a picker's perch, and means supporting said perch from and elevated above said platform for adjustment vertically, to and fro in traverse, and projectably away from and towards said platform, for ready access to a tree.



2,450,153
VOLTAGE INDICATOR FOR ELECTRIC FENCES
Sidney A. Moore, Milwaukee, Wis., assignor to The Prime Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 9, 1944, Serial No. 557,924
1 Claim. (Cl. 175—183)

In a device for indicating the effectiveness of the charge on an electric fence, the combination of: a front panel having a row of window openings therein; a back panel having a row of holes therein spaced to correspond with the spacing of the window openings in the front panel; a plurality of glow lamps one for each window opening, said lamps being larger than the window openings and the holes in the back panel; means for securing the panels together in spaced parallel relationship with the glow lamps held in place therebetween by a part of each lamp projecting into and bearing against the edges of a window opening in the front panel and another part of each lamp projecting into and bearing against the edges of the adjacent hole in the back panel; a plurality of resistors; conductors connecting the glow lamps and resistors in circuit with a different value of resistance across each lamp and with

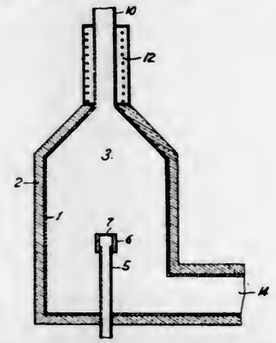


said difference resistance values arranged in series circuit and in order of magnitude from one end to the other of the bank of glow lamps, said resistors being on one side of the back panel and the terminals of the lamps being on the other side of the back panel, said conductors having portions thereof passing through holes in the back panel adjacent to the lamp receiving holes therein and holding the lamps and the resistors to the back panel so that the back panel, lamps and resistors comprise a sub-assembly capable of being mounted in place as a unit; a conductor leading from one end of the bank of glow lamps for connection to ground; and another conductor leading from the other end of the bank of glow lamps adapted to be connected to an electric fence.

2,450,154
SHOCK ABSORBER
Walter J. Osterhoudt, Houston, Tex.
Original application November 17, 1942, Serial No. 465,892, now Patent No. 2,377,442, dated June 5, 1945. Divided and this application March 28, 1945, Serial No. 585,272
7 Claims. (Cl. 267—1)

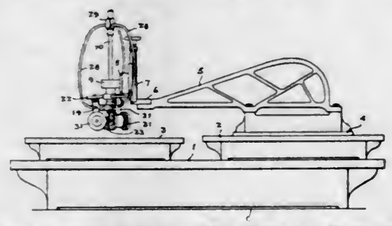
1. A tension shock absorber adapted to be interposed between a substantially fixed support and a source of tension such as a line, cable or the like, comprising two pairs of toggle links having their remote ends pivotally interconnected, means for connecting the fulcrum of one pair of links to the source of tension, a swivel for operatively connecting the other fulcrum to the support, and means interposed between the interconnected ends of the toggle links to resist lateral collapse of the toggles under tension, said means comprising a floating cylinder, a pair of pistons therein, each having an orifice therein, piston rods associated with the pistons, each operatively connected to the adjacent interconnected ends of the toggle links, coil compression springs between the ends of the cylinder and the adjacent interconnected ends of the toggle, and a body of fluid in the cylinder.

2,450,155
SOAP POWDER DISPENSER
George H. Packwood, Jr., St. Louis, Mo.
Application June 26, 1942, Serial No. 448,585
12 Claims. (Cl. 222—197)



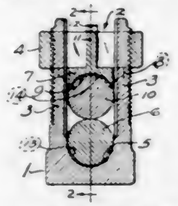
1. A dispenser for finely divided material, including a bowl having a tapering bottom portion, an orifice at the bottom thereof, a disc valve shaped to have a sliding fit in the orifice, a plunger extending upwardly from the valve, a striker member across the top of the bowl, and having an opening through which the upper end of the plunger extends, means above the striker member suspending the plunger in the orifice to close the same, said means being removable from the top of the plunger to permit the plunger and valve to be withdrawn through the orifice, and means to adjust the upward limit of the stroke of the valve.

7. In a dispenser for finely divided material, a bowl, an outlet at the bottom thereof, a valve adapted to close the outlet, a plunger extending axially into the bowl, means securing the valve to the plunger, a strap across the interior of the bowl, an opening through the strap through which the plunger passes, and means above the strap limiting the downward movement of the plunger to dispose the valve in the outlet to close the same, a transverse opening through the plunger adjacent and below the strap, a handle pivotally secured therein, and extending laterally of and through the bowl, the bowl being provided with an opening to that end, a shield over the strap and depending below the handle to check flow of material around the upper end of the plunger and the handle portions.



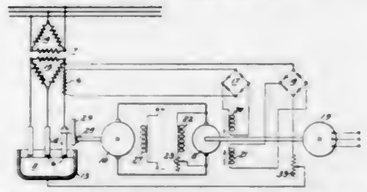
2,450,156
PROCESS OF AND APPARATUS FOR PRODUCING TITANIUM DIOXIDE
Alphonse Pechukas, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application June 7, 1944, Serial No. 539,067
7 Claims. (Cl. 23—202)

1. In a process of preparing titanium dioxide by reaction of oxygen with vaporized titanium tetrachloride while minimizing crystal formation by conducting the reaction out of substantial contact with hot surfaces, the steps which comprise injecting a portion of a stream of vaporized titanium tetrachloride into a reaction zone through a nozzle, diffusing a further portion of said stream transversely to the direction of flow thereof through the nozzle wall and into the reaction zone, and injecting a countercurrent stream of preheated oxygen into the reaction zone and into contact with the portion of the vaporized titanium tetrachloride stream issuing from the nozzle; the portion of the vaporized titanium tetrachloride stream issuing from the nozzle and the oxygen stream being so regulated as to meet at a point remote from the bounding surfaces of the reaction zone.



4. Apparatus for conducting a gas phase reaction comprises; walls defining a reaction chamber, a conduit extending into the chamber and terminating therein at a point spaced from the walls of the chamber, a refractory nozzle having a porous wall attached to the end of the conduit, a second conduit for conducting a reactant into the reaction chamber; said second conduit being spaced from and directed toward the nozzle, and means for heating said second conduit.

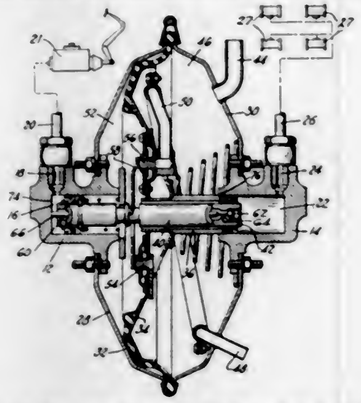
2,450,157
MEANS FOR PREPARING TRUE SURFACES
Samuel Charles Peckett, Toronto, Ontario, Canada
Application August 23, 1946, Serial No. 692,605
8 Claims. (Cl. 51—33)



1. A means for preparing true surfaces comprising a master true surface, an inverted true surface member slidably mounted on the aforesaid master surface and having a laterally extending arm, a member vertically adjustably supported from said arm, a plurality of members pivotally supported on said vertically adjustable member to swing towards and away from each other in angularly arranged vertical planes, and grinder wheels mounted to rotate on said swingable members.

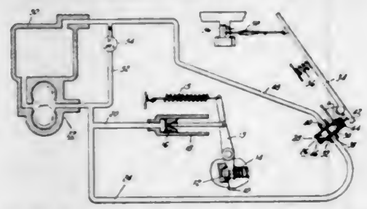
2,450,158
CONNECTOR BOLT
Ford Pennell, Webster Groves, Mo., assignor to Jane Booth Pennell, Webster Groves, Mo.
Application September 4, 1944, Serial No. 552,613
11 Claims. (Cl. 287—77)

1. In a connector bolt, a bolt head member, spaced legs extending therefrom and arranged to receive between them wires one above the other, a member slidable along said legs towards said head member, there being means for thrusting said members towards each other, at least one of said members having projections constructed and arranged to be forced into the peripheries of the adjacent wire to better hold the wire against being pulled endwise from the bolt, said projections being aligned with said means at points of thrust so that thrust between said means and said bolt head is in a substantially straight line longitudinally of said bolt through the projections.



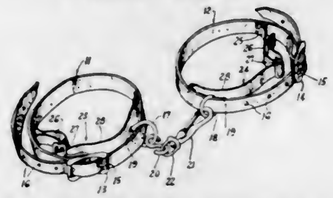
2,450,159
CONTROL SYSTEM
William M. Pickslay, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application August 14, 1944, Serial No. 549,373
27 Claims. (Cl. 314—75)

1. In a control system for an electric arc furnace provided with relatively movable electrodes adapted to have an arc drawn therebetween, motor means for moving one of said electrodes, means for controlling said motor means comprising a dynamoelectric machine provided with two opposed inductively related field windings, means connecting one of said field windings responsively to the current through said arc, means connecting the other of said field windings responsively to the voltage across said arc, and a self-energizing field winding on said dynamoelectric machine connected to be energized in accordance with the energization of said dynamoelectric machine.



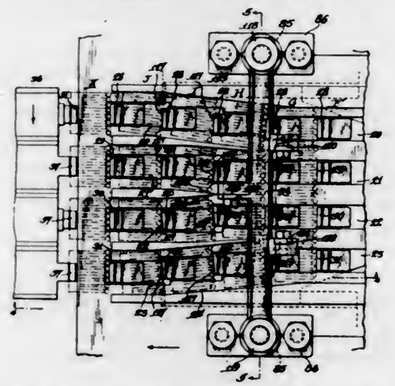
2,450,160
PRESSURE FLUID OPERATED PRESSURE INTENSIFIER
Earl R. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 19, 1944, Serial No. 531,721
3 Claims. (Cl. 60—54.5)

3. A device, for applying a combined power and manually created pressure to a hydraulic pressure system, having coaxial bores at opposite sides thereof, one connected to a manually operable hydraulic master cylinder and the other connected to a hydraulic motor, an annular plunger reciprocable in the motor-connected-bore, a power-operated booster element operatively associated with the annular plunger to drive the same to build pressure in the motor, and a stepped piston having a small diameter portion extending



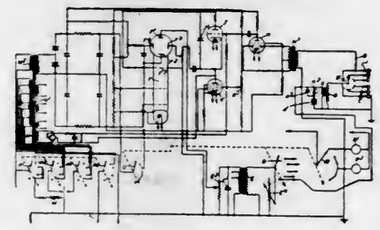
through the annular plunger into the motor-connected-bore and a large diameter portion reciprocable in the master-cylinder-connected-bore, the small diameter end of the piston being supported by bearing contact with the plunger only at the forward end of said plunger, thereby permitting angular pivotal movement of the piston and plunger with respect to one another during their pressure stroke.

2,450,161
CLUTCH CONTROL MECHANISM
Earl R. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 28, 1945, Serial No. 596,312
4 Claims. (Cl. 192—.01)



1. In an automotive vehicle provided with an internal combustion engine having a throttle valve, an accelerator, force transmitting means interconnecting the accelerator and throttle valve, and a spring operated friction clutch; power means including yieldable means for disengaging said clutch and hydraulic means for controlling the engagement thereof in two stages of operation, said hydraulic means comprising a motor having its power element operably connected to the clutch, an engine driven pump constituting a source of power for energizing the motor, means for controlling the operation of said hydraulic means comprising an accelerator operated valve and fluid transmitting means interconnecting the motor, the valve and the pump, the parts of the aforementioned mechanism and the force transmitting means interconnecting the accelerator and engine throttle being so constructed and arranged and so operative that upon release of the accelerator the motor is deenergized thereby making possible a disengagement of the clutch by the yieldable means, the parts of the mechanism being also so constructed and arranged and so operative that upon initial depression of the accelerator the motor is energized to effect the first stage of movement of the driven clutch plate as the clutch is being engaged, the second stage of movement being effected when and only when the throttle is opened.

2,450,162
GOLF PRACTICE DEVICE
William N. Promen, Chicago, Ill.
Application May 1, 1947, Serial No. 745,128
2 Claims. (Cl. 273—35)

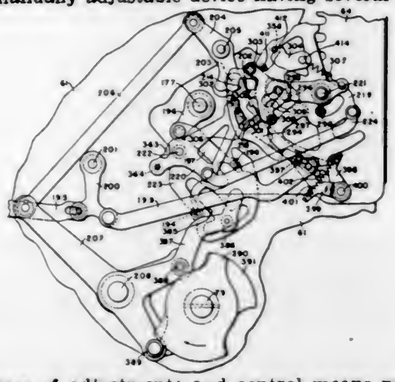


2. A golf practice device comprising: a plurality of straps, one adapted to form a closed loop loosely positioned about one arm in the proximity of its elbow and another to form a like loop about the other arm; adjusting means for varying the size of said loops; elastic members, at least one of which is attached to each of said loops to form a ring within the latter adapted to fit snugly about the arm for holding said loop in place; adjusting means for varying the size of said rings; and means for joining said loops for limiting the distance by which the arms may be separated from each other while making a golf stroke.

2,450,163
MATCH COMB HANDLING CONVEYER
Rodney S. Pullen, Akron, Ohio, assignor to Pullenlite Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 1, 1943, Serial No. 493,117
12 Claims. (Cl. 144—51)

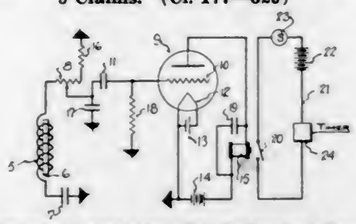
1. In a match comb handling system, a table, a step-by-step flight conveyor movable therein and having a plurality of conveyor blades, a cradle suporting the conveyor blades and in which the conveyor blades are movable longitudinally of the table, cam operated means for lifting and lowering the cradle and cam operated reciprocating means guided by the cradle moving the conveyor blades longitudinally of the table, means for timing the several cam operated means to lift the conveyor blades to operating height above the table, to move the conveyor blades lengthwise of the table while they carry the match combs one step, to lower the blades below the table level and to reverse the blade movement beneath the table to a position where the blades can be raised, moved, lowered, reversed, etc, to repeat the operation.

2,450,164
MEANS FOR TESTING ELECTRICAL IGNITION SYSTEMS OF INTERNAL-COMBUSTION ENGINES
Frank Raymond Faber Ramsay, London, England, assignor to D. Napier & Son Limited, London, England, a company of Great Britain
Application February 1, 1944, Serial No. 520,716
In Great Britain February 12, 1943
6 Claims. (Cl. 175—183)



5. Apparatus for testing the ignition systems of internal combustion engines including a cathode ray tube, a time base circuit for said tube, means for triggering the time base from the circuit of one of the sparking plugs, means for connecting the tube to the low tension or primary side of the ignition apparatus so as to receive impulses and give indications representing the wave form of a succession of impulses delivered respectively to the several sparking plugs supplied by the ignition apparatus, filtering means for filtering out the loops due to high frequency oscillations in the ignition apparatus, and variable attenuating means arranged for progressively reducing the intensity of the impulses delivered to the sparking plugs so as to cause them successively to fail to spark.

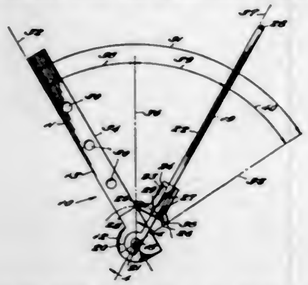
2,450,165
CASH REGISTER
Harold O. Randall, Dayton, Ohio, and John B. Geers, deceased, late of Dayton, Ohio, by John H. More, administrator, Cincinnati, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application June 3, 1943, Serial No. 489,516
24 Claims. (Cl. 235—3)



16. In a machine of the class described, the combination of two totalizers mounted on a common axle; actuators for the totalizers; means for shifting the totalizers relatively to the actuators to select either of said totalizers for actuation thereby; means common to both of the totalizers for engaging and disengaging the selected totalizer with and from the actuators; manipulative control elements; means controlled by the elements and common to the shifting means and

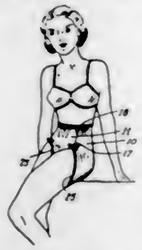
the engaging and disengaging means for determining which of the totalizers will be selected by said shifting means and for determining the effectivity of said engaging and disengaging means; a manually adjustable device having several po-

sitions of adjustment; and control means positioned by the manually adjustable device and effective when said device is moved to a certain one of its several positions of adjustment to alter the control of the means controlled by the elements over the engaging and disengaging means.



2,450,166
ELECTRICAL DETECTION APPARATUS
Nicholas S. Rich, Milwaukee, Wis.
Application August 18, 1944, Serial No. 549,987
5 Claims. (Cl. 177—329)

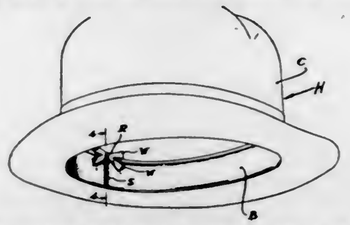
1. Detector apparatus for detecting the passage of automotive vehicles comprising the combination of: a detector unit adapted to have E. M. F. induced therein by the passage in proximity thereto of an automotive vehicle; a condenser; means defining a closed condenser charging circuit, including said detector unit and the condenser connected in series circuit whereby the condenser becomes charged in consequence to the induction of an E. M. F. in the detector unit; a thermionic tube having a control grid; a resistance; means connecting the resistance with the detector unit and the condenser so that discharge of the condenser effects a voltage drop across the resistance; and means for applying a potential derived from the voltage drop across the resistance upon the grid of the tube to supply positive grid bias thereto and thereby render the tube conductive for the passage of current by which an indicator may be actuated.



2,450,167
DEVICE FOR TRISECTING ANGLES
George C. Robinson, Los Angeles, Calif.
Application October 14, 1946, Serial No. 703,225
4 Claims. (Cl. 33—97)

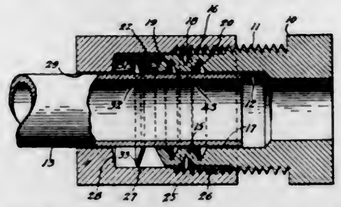
1. A device for trisecting angles, comprising in combination, a blade, a pivot adjacent one end of said blade, an arm mounted adjacent one end thereof on said pivot, one longitudinal edge of said arm and one longitudinal edge of said blade radiating from said pivot, and an elongated cursor slidable on said arm, one longitudinal edge of said

cursor being equal in length to twice the width of said blade and extending at right angles to said arm, one end of said cursor being engageable with the remaining longitudinal edge of said blade.



2,450,168
UNDERGARMENT
Julius Schwartz, Astoria, N. Y.
Application April 21, 1947, Serial No. 742,765
2 Claims. (Cl. 2—224)

1. An undergarment comprising a main portion constituting the entire back and sides of such undergarment and extending from the waistline downwardly, its side edges diverging downwardly from about midway of its height, a panel portion secured between the side parts of the main portion above the points of divergence, its side edges converging downwardly from said points, a crotch portion secured at one end to said panel portion and at the other end to said main portion, the side edges of the front part of said crotch portion converging downwardly and constituting a continuation of the corresponding converging side edges of the respective sides of the panel portion, said converging and diverging edges bounding an inverted V-shaped cut-out to overlie the front of each leg of a wearer with the apex of the V on the front center line of the leg.

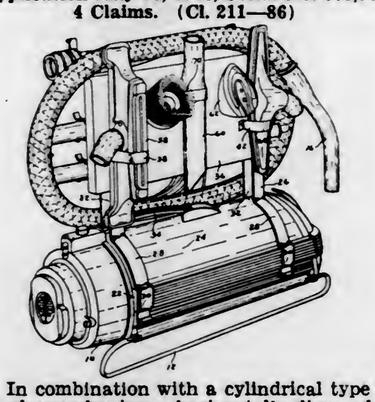


2,450,169
HAT SWEATBAND
Herman Seiden, Plainfield, N. J., assignor of one-third to Aaron M. Hartman, New York, and one-third to Harry Ornstein, Brooklyn, N. Y.
Application September 16, 1946, Serial No. 697,189
2 Claims. (Cl. 2—181)

1. A sweat band for insertion within the crown of a hat comprising; a relatively narrow body having the entire height of its free ends disposed in close juxtaposition, a flexible membrane having a medial portion mounted on and overlapping contiguous portions of said ends and having wing means extending laterally of said medial portion and disconnected from said portions, and a line of stitching securing said en-

tire height of said ends together and the entire height of said medial portion to said contiguous portions to preclude lifting of said ends away from each other and concomitantly permit displacement of said wing means relative to said contiguous portions.

2,450,170
FITTING
George Goodwin Smith, Chicago, Ill., assignor to Robert L. Kahn, Chicago, Ill., as trustee
Application November 15, 1946, Serial No. 710,189
4 Claims. (Cl. 285—122)



1. A metal fitting for retaining the smooth end of a pipe comprising a pair of coupling thimbles having cooperating inner and outer threaded portions, the thimble having the outer threaded portion having an integral annular extension with staggered inner and outer generally V-shaped annular grooves, each groove having a depth of between about .6 and about .8 times the extension thickness with a groove angle between about 45 and about 65 degrees and a stagger between adjacent inner and outer grooves between about ½ and about 2 times the extension thickness, said thimble having the inner threaded portion having an inner shoulder for exerting force upon the free end of the extension, said thimbles being adapted to be drawn up tightly to provide flow of metal without buckling the conical shaped walls formed by the groove.

2,450,171
COMPOSITION OF FRICTION MATERIAL
Thornton R. Stenberg, Troy, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
No Drawing. Application September 20, 1944, Serial No. 555,019
1 Claim. (Cl. 106—36)

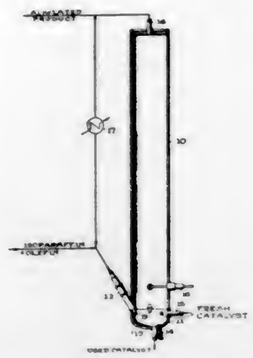
A material for the purpose described, having the following constituency:

	Percent
Asbestos fibre	66 to 74
Dried and ground tung pomace	14 to 6
Resin	20 to 15

2,450,172
ACCESSORY STAND FOR CYLINDER TYPE VACUUM CLEANERS
Paul E. Stoner, Jackson, Mich.
Application May 10, 1946, Serial No. 668,909
4 Claims. (Cl. 211—86)

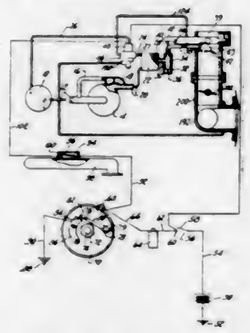
3. In combination with a cylindrical type vacuum cleaner having a horizontally disposed casing, a saddle comprising a pair of forked members engaging with said casing and spaced at points longitudinally thereof, said saddle carrying a vertically disposed tool supporting member, said member extending longitudinally of said casing and being disposed substantially in a vertical plane through the center of mass of said casing.

2,450,173
SEAL FOR TANK OPENINGS
William C. Uhri, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application June 25, 1947, Serial No. 756,996
3 Claims. (Cl. 285—49)



1. In a seal for an opening in a hot water storage tank having a corrosion resistant lining to protect the tank from corrosion by contained fluid, a tubular generally thin corrosion resistant ferrule secured within the opening in said tank with a portion thereof projecting inwardly and outwardly of the opening, a resilient gasket encircling said ferrule on the inside of said tank, a flange on the inner end of the ferrule disposed to confine said gasket against the inside of the tank around said opening to seal off the approach of the contained fluid to the edge of the opening, and a corrosion resistant tubular member secured to the inside of said ferrule for supporting an element therein.

2,450,174
CATALYTIC CONTACT PROCESS
William W. Weinrich, Bartlesville, Okla., Clark A. Holloway, Jr., Oakmont, Pa., and William S. Bonnell, Port Arthur, Tex., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application January 11, 1945, Serial No. 572,312
10 Claims. (Cl. 260—683.4)

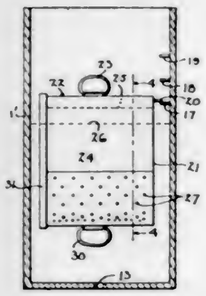


1. A process of contacting fluid reactants with a solid catalyst slurry comprising introducing the

fluid reactants by means of a downwardly directed jet into the lower portion of a vessel containing catalyst slurry with sufficient force to cause substantial turbulence of said catalyst slurry, settling any catalyst that may rise to the upper

portion of said vessel and causing it to flow back to the lower portion of said vessel, withdrawing the reaction product formed by contact with said catalyst from the upper portion of the vessel, and recycling a portion of said product with the reactants.

2,450,175
FUEL SYSTEM FOR STARTING
Emil O. Wirth, South Bend, Ind., and William E. Leibing, Detroit, Mich.; said Wirth assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware; said Leibing assignor to Leibing-Fageol Company, Detroit, Mich.
Application September 4, 1945, Serial No. 614,156
29 Claims. (Cl. 123—180)

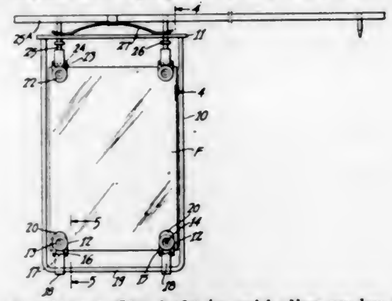


17. In an internal combustion engine having an ignition system including a distributor in the primary circuit, said distributor including a contact lever controlled by a cam whereby the primary circuit is made and broken: a main fuel supply system; an auxiliary fuel supply system; a primer controlling the auxiliary system; a valve for said primer; a solenoid for actuating said valve; and an electric circuit connecting the solenoid with said distributor for intermittently energizing said solenoid while said primer is in operation.

2,450,176
PREPARATION OF PALLADIUM OXIDE
Herbert E. Zschiegner, Ocean Grove, N. J., assignor to Emanuel Honig, Brooklyn, N. Y.
No Drawing. Application August 18, 1947, Serial No. 769,327
2 Claims. (Cl. 252—472)

1. A method of preparing palladium oxide on a refractory support, including mixing the support with an aqueous solution of palladium and silver nitrates, evaporating the water from the result and heating it to temperatures above the decomposition temperature of palladium nitrate and below the decomposition temperature of silver nitrate for a sufficient time to decompose a substantial portion of the palladium nitrate to palladium oxide and subjecting this result when cooled to the action of a solvent of the silver nitrate but not of the palladium oxide to dissolve the former from the latter and to leave a deposit of the palladium oxide on said support.

2,450,177
BEVERAGE DEVICE
Francis Parker Allen, Beaumont, Tex.
Application May 29, 1944, Serial No. 537,815
4 Claims. (Cl. 99—282)

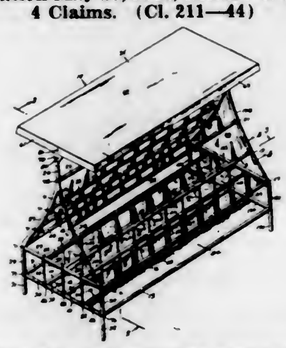


1. A device of the class described comprising an imperforate container to receive a liquid, a multiple range heating unit in the lower portion of said container, switch means for said unit including an actuating member proximate the side wall of said container, a perforate container adapted to enter said imperforate container and engage said actuating member and energize the unit at a high heat rate as said last mentioned container moves telescopically under gravity within the imperforate container, and means in the perforate container for containing a material to be treated by immersion as heated liquid rises therein, said perforate container including means for operating said switch to energize the heating unit at a lower rate as the container approaches its lowermost position of travel.

2,450,178
FILM TENSIONING HOLDER FOR FLUID PROCESSING
Daniel A. Albert, Richmond Hill, N. Y.
Application November 14, 1946, Serial No. 709,684
2 Claims. (Cl. 95—100)

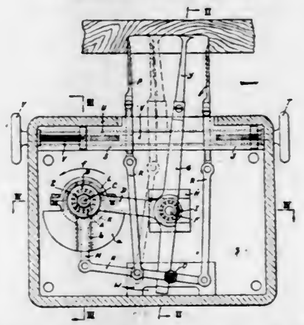
1. A film holder comprising a carrier bar, spaced guide arms extending from one side of the carrier bar, a frame mounted for sliding movement on said arms, film engaging clips on the ends of said arms within one end of said frame, clips on the other end of the frame and a

spring means intermediate the carrier bar and the frame for urging the latter away from the



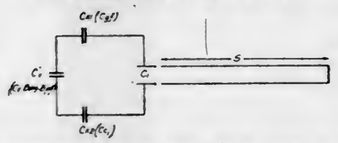
bar to place a film held in said clips under tension.

2,450,179
REARVIEW MIRROR
James W. Anderson, Jr., Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a corporation of Michigan
Application May 3, 1947, Serial No. 745,785
7 Claims. (Cl. 248—226)



1. A mirror assembly for a vehicle having a door provided with a flange, which comprises a mirror-supporting arm, a clamping member mounted on the inner end of said arm and being shaped to embrace said flange, means for securing said clamping member to said flange, a fastening element for securing said clamping member to said arm while permitting angular movement of the former with respect to the latter, and locking means for preventing undesired angular movement of said clamping member, said locking means including cooperative notched and projecting elements for fixedly securing the clamping member in place in one of a plurality of angular positions on said arm.

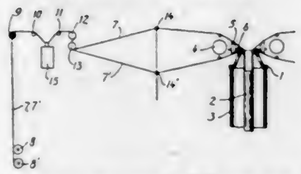
2,450,180
CLOTH BOLT DISPLAY RACK
Edmond P. Bixer, New York, N. Y.
Application May 20, 1946, Serial No. 670,979
4 Claims. (Cl. 211—44)



2. A cloth bolt display rack comprising: first and second end elements; means connecting said end elements and maintaining the same in spaced position; a cloth bolt support element connected to and extending between said end elements, said cloth bolt support element including a longitudinally arranged support member and a plurality of bolt engaging members extending at an angle with respect thereto; said support member being rotatable about its own longitudinal axis; and means to limit the rotation of the longitudinally arranged support member.

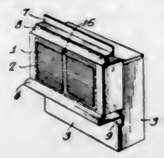
2,450,181
SLOTTING AND TENONING MACHINE
Auguste Boucher and Lucien Parveau, Vignols, France
Application February 3, 1947, Serial No. 726,036
In France February 27, 1946
5 Claims. (Cl. 144—80)

1. A mortising machine, chiefly for wood cutting, comprising a driving shaft, a plate with a slideway adapted to rotate therewith in a plane perpendicular thereto, a knob of adjustable eccentricity carried by said plate, a connecting rod pivotally secured to said knob, a spindle parallel to the shaft and pivotally carrying the other end of said connecting rod, means for adjusting the position thereof with reference to said shaft, an arm rigid with the connecting rod, a cutting tool carried by said arm, an eccentric disc carried by the driving shaft, a connecting rod fitted over said eccentric disc, a lever pivotally secured through a medial point to a stationary axis and through an end thereof to the free end of said last mentioned connecting rod, twin connecting rods pivotally secured to the other end of said lever to either side of the said arm carrying the cutting tool with reference to the shaft and mortising chisels carried by the ends of each of said last mentioned twin connecting rods.



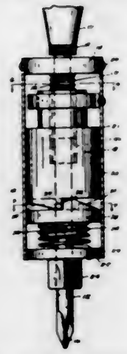
2,450,182
FREQUENCY MODULATION AT ULTRA HIGH FREQUENCIES
Franklin L. Burroughs, Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application March 26, 1943, Serial No. 480,611
4 Claims. (Cl. 179—171.5)

1. In combination, an oscillator tube, a modulator tube, and a tuned transmission loop having



connected thereto a frequency-determining capacity network comprising four capacitances, one of the capacitances being in shunt to the loop the other three capacitances being in series with each other, the series capacitances also being in shunt to said loop, said one capacitance comprising the interelectrode inherent capacitance between two of the electrodes of the oscillator tube, said other three capacitances comprising in series respectively the grid-cathode capacitance of the oscillator tube, the grid-cathode capacitance of the modulator tube and a separate condenser, and means to vary the bias on the grid of the modulator tube to vary thereby the effective capacitance of said network and thereby varying the frequency of the oscillations in said loop.

2,450,183
CHECKING DEVICE FOR THE WARP THREADS IN CIRCULAR LOOMS
Christian Christiansen, V. Aker, near Oslo, and Gustav Otto Karl Rüsch, Mandal, Norway
Application January 9, 1947, Serial No. 720,984
In Norway December 14, 1945
4 Claims. (Cl. 139—13)

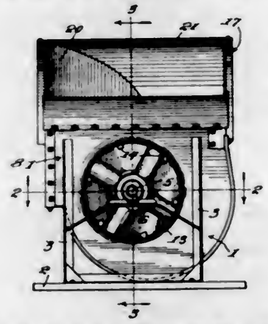


1. In a circular weaving loom for the weaving of textile hoses, the provision of a number of cylindrical members over which the warp threads are passed in combination with stopping and releasing means for the rotational movement of the said members, acting in dependence upon the direction of draw in the warp threads so as to allow the rotation of the said members at the closing of the shed but keep the members stationary by the opening of the shed, thereby effecting a frictional check upon the warp threads sliding on the members.

2,450,184
AIR CONDITIONING GRILLE OR REGISTER ASSEMBLY
Harry E. Coleman, Mount Vernon, N. Y.
Application May 18, 1945, Serial No. 594,559
6 Claims. (Cl. 98—114)

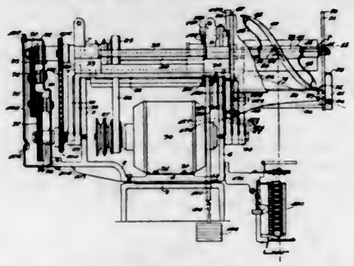
1. A prefabricated air outlet or air inlet assembly for air conditioning systems comprising, in combination, a duct elbow having a vertical portion adapted to be located between two studs of a building and in which it is to be installed and a horizontal portion adapted to extend through the finished wall which is to be carried by the studding and a grille-carrying wall ferrule plate connected to the room end of said horizontal duct portion, said assembly having rearwardly extending flanges overlapping the sides of said studs and adapted to be connected thereto, before the wall is applied, to support and to maintain said ferrule and said duct end in the desired ultimate relation to the finished wall and also having integral rearwardly offset top and bottom flanges arranged to be connected to the front faces of the two studs between which the duct is located.

2,450,185
HAND OPERATED ROTARY IMPACT SCREW DRIVER
Howard F. Craven, Redondo Beach, Calif.
Application October 31, 1944, Serial No. 561,273
2 Claims. (Cl. 145—50)



2. In a device of the character described including a screw driver formed with a shank having a handle secured on one end and a blade on its opposite end, a collar having a reduced externally threaded depending portion slidably and rotatably disposed on said shank, an operating sleeve disposed about said collar, means for connecting said sleeve and collar together, a second collar slidably and rotatably disposed about said shank and secured to the lower end of said sleeve, a relatively heavy cylindrical block disposed within said sleeve and slidably and rotatably about said shank, said block being formed with an axial bore threaded in its upper end said threaded portion being engageable with said reduced externally threaded depending portion, the upper end of said block being reduced, a convolute spring disposed about said reduced upper end of the block having one end secured thereto and its opposite end secured to said sleeve, the lower end of said block being formed with a cam surface terminating in a shoulder, a plate disposed about and secured to said shank below said block and within said sleeve and having a reduced depending portion on its lower end and a cam surface terminating in a shoulder on its upper end said last mentioned shoulder cooperating with said first mentioned shoulder and normally abutting the latter, a coil spring disposed about said reduced depending portion of said plate abutting the lower surface of the plate at its upper end and secured to said second collar at its lower end, and a position limiting block removably secured to the said shank by said block being positioned below said second collar and spaced from said plate.

2,450,186
TURBINE BLOWER
Benjamin W. Curry, Jacksonville, Fla.
Application October 1, 1946, Serial No. 700,429
3 Claims. (Cl. 230—128)



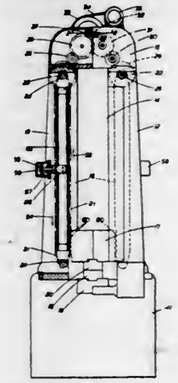
3. In a blower of the type having an impeller with a plurality of blades carried by spaced rings

mounted on a shaft, the combination which comprises a housing with the wall thereof on a plurality of gradually enlarging radii and leading to a rectangular-shaped discharge port, and an elbow positioned on said housing including an arcuate wall extended from one end of the discharge port across the said port, over the impeller, and

directing air from the impeller in a path parallel with the axis of the shaft and spaced therefrom, said elbow having a flat side and an arcuate side extending from a point extending slightly over the axis of the shaft to the opposite side of the housing and adapted to direct air from the impeller into a path aligned with the axis of the shaft.

2,450,187
WINDING MACHINE
Irving W. Day, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a corporation of Massachusetts
Application July 3, 1945, Serial No. 603,040
9 Claims. (Cl. 242—43)

1. In a winding machine, a rotatable winding spindle for supporting a winding package, a driveroll adapted to contact the package to rotate the winding spindle and to recede therefrom with the growth in the winding, a cam arranged in parallel relation to the winding spindle and initially positioned in close association therewith, a mounting provided with bearings for the cam and movable relatively to the winding spindle to adapt the cam to recede therefrom with the growth of the package being wound, means for connecting the winding spindle to drive the cam, and means reciprocated by the cam to traverse the yarn longitudinally of the winding spindle.

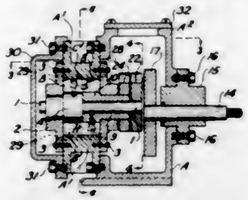


2,450,188
PUSH AND PULL LOAD GAUGE
Bastiaan De Graaf, Yonkers, N. Y.
Application March 24, 1945, Serial No. 584,611
1 Claim. (Cl. 73—141)

A push and pull load gauge having a fountain-pen-shaped tubular holder comprising a tubular cylinder, a bored insert at each end of the cylinder, the bores of the inserts being of lesser diameter than the bore of the cylinder, a tubular scale bar having an annular flange at one end extending through the bore of one insert and into the cylinder, a helical spring within the cylinder having one end bearing against one of the inserts and the other end bearing against said annular flange, a reversible push-pull bar having a flange near

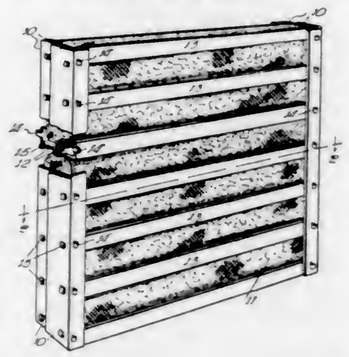
one end, said push-pull bar extending into the tubular scale bar with its flange bearing against the end of the scale bar adjacent the annular flange, a coupling attached to one end of the push-pull bar for connecting a load, whereby the force applied by the load to the push-pull bar will move the scale bar against the compression of the spring to give an indication of the value of the load.

2,450,189
DROP HAMMER, STAMP, AND THE LIKE
Frederick Emanuel, Barnes, London, England, assignor to Eumuco (England) Limited, Barnes, London, England, a British company
Application October 12, 1944, Serial No. 558,303
In Great Britain October 13, 1943
4 Claims. (Cl. 78—30)



2. In a forging machine, in combination, a frame comprising guides extending generally vertically, a tup slidably mounted within said guides, a projection on said tup extending laterally therefrom and providing a downwardly facing fixed surface adapted to be engaged for lifting the tup, chain supporting means disposed alongside the path of the tup, a driving chain carried on said supporting means, means for moving said supporting means toward said tup to cause said chain to engage said surface for lifting the tup and for moving said supporting means away from said tup to cause said chain to disengage said surface to allow the tup to fall, and means to drive said chain.

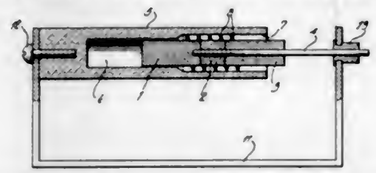
2,450,190
ROTARY COMPRESSOR LUBRICATION
Emil L. Fabian, Vallejo, Calif.
Application March 13, 1944, Serial No. 526,261
2 Claims. (Cl. 230—207)



2. In a rotary valveless compressor, a casing having an annular cylinder therein, pistons mov-

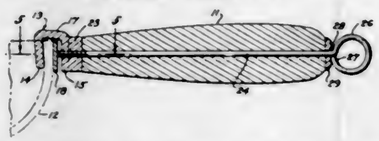
able in the cylinder, a pair of shafts rigidly connected to the pistons for moving them, means disposed on one side of said cylinder for rotating said shafts, a lubricant retaining reservoir housing said means and keeping said means lubricated, a bearing for one of said shafts disposed on the other side of the cylinder, a second lu-

bricant retaining reservoir for housing said bearing, said casing having passages lying outside of the annular cylinder and placing the reservoirs in communication with each other for transmission of a lubricant without the lubricant entering the annular cylinder, said first named reservoir having a cover for permitting lubricant to be added as needed.



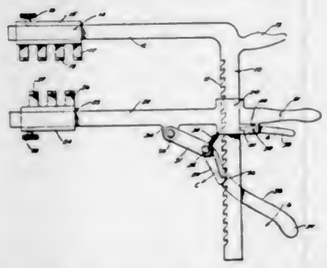
2,450,191
MAT FRAME FOR EVAPORATIVE COOLERS
Archie S. Feinberg, Dallas, Tex.
Application September 28, 1945, Serial No. 619,145
3 Claims. (Cl. 261—97)

1. In an evaporative cooler, a mat and mat frame, the latter comprising vertical end members and confronting pairs of side members vertically spaced and supported by said end members, members of said pairs each having a flat portion lying in a common horizontal plane and castellated whereby the confronting flat portions of said pairs of side members will compressedly engage said mat at vertically and horizontally spaced points throughout its area.



2,450,192
ULTRA HIGH FREQUENCY TUNING UNIT
Walter C. Freeman, Jr., Emporium, Pa., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts
Application June 19, 1943, Serial No. 491,443
5 Claims. (Cl. 171—242)

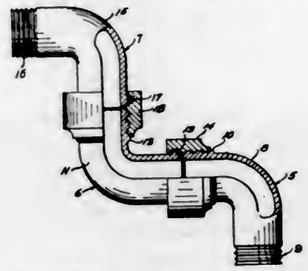
1. A permeability-tuned coil assembly comprising a cylindrical coil, a cylindrical tuning core only slightly less in diameter than the inside coil diameter, and a body of insulating material having one portion encasing said coil and having a coaxial bore in another portion for slidably ac-



cepting and centering such part of said core as is extended beyond said coil.

2,450,193
POT HANDLE
John B. Galliano, Oakland, Calif., assignor to Industrial Ideas, Inc., Oakland, Calif., a corporation of California
Application August 2, 1946, Serial No. 688,025
2 Claims. (Cl. 294—27)

1. A quickly and securely attachable pot handle having a handgrip, a clamp at an end of the handgrip, the clamp having a fixed gripping arm to be located inside the pot adjacent to its rim and a movable gripping arm to be located outside the pot opposite to the fixed arm, a rod to move the movable arm toward the fixed arm and extending through the handgrip and a part of the clamp and having screw thread connection with the latter, the rod projecting beyond the other end of the handgrip, and a loop on the projecting end of the rod and having a part closer to the handgrip than the meeting point of the rod and the loop.

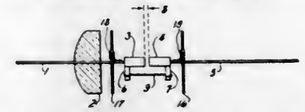


2,450,194
ADJUSTABLE RETRACTOR
Mark Albert Glaser, Los Angeles, Calif.
Application July 22, 1946, Serial No. 685,516
2 Claims. (Cl. 128—20)

1. Surgical retractors comprising a rigid retractor bar, a rack bar integral therewith and disposed at right angles thereto, a movable retractor bar unit including a cross-head slidably mounted upon the rack bar, a retractor bar integral therewith and extending parallel to the first named retractor bar, handles on the first named retractor bar structure, a cross-head whereby the retractor bars may be moved directly toward and away from each other, rack teeth along one edge

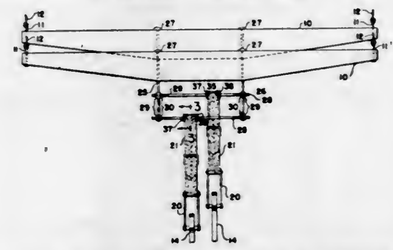
of the rack bar, a pawl adapted to engage said rack teeth, and a lever mechanism associated with said pawl and carried by the movable retractor bar structure whereby the two rack bars may be moved apart forcibly.

2,450,195
ADJUSTABLE PIPE FITTING ASSEMBLY
William H. Grantham, Magnolia, Ark.
Application September 21, 1946, Serial No. 698,445
2 Claims. (Cl. 285—211)



1. An adjustable pipe fitting assembly comprising three elbow fittings, one of said fittings comprising an elbow body having a fine male pipe thread on one end and a coarse union thread on the other end, another of said fittings comprising an elbow body having a coarse male union thread on one end and a union lip on the other end, a coupling nut having swiveled engagement with said lip and threaded onto the coarse union thread of said one fitting, the remaining fitting comprising an elbow body having a fine male pipe thread on one end and a union lip on the other end, and a second coupling nut having swiveled engagement with the last named lip and threaded onto the coarse union thread of the second-named fittings.

2,450,196
BRAKE SHOE ADJUSTING GAUGE
John Meridith Houston, Breckenridge, Tex.
Application February 9, 1946, Serial No. 646,557
1 Claim. (Cl. 33—178)

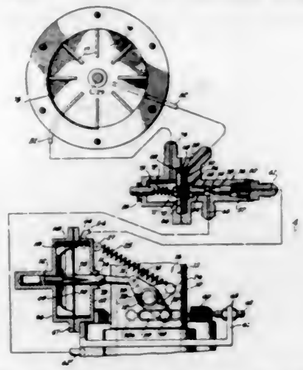


A brake shoe gauge comprising a hollow cylindrical body having a longitudinal slot extending throughout the length of the cylinder wall to provide a pair of spaced edges, a pair of opposed anchor blocks fixed on the body adjacent the spaced edges, and an adjustable connector between said blocks, said cylindrical body including a male end portion and a femal end portion, said male end portion including a cylindrical outer surface, said female end portion including a cylindrical inner surface, the outer cylindrical surface of said male end portion and the inner cylindrical surface of said female end portion being co-axial continuations of each other.

2,450,197
ELECTRIC DISCHARGE DEVICE
Harry Kenneth Ishler, Floral Park, N. Y., assignor to Sylvania Electric Products, Inc., a corporation of Massachusetts
Application December 29, 1945, Serial No. 637,889
17 Claims. (Cl. 250—27.5)

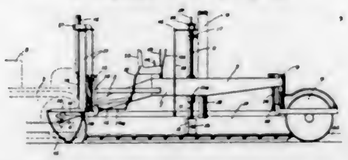
1. The method of securing the desired spacing between the electrodes of an electric discharge tube which comprises spacing the electrodes with conducting spacers during the construction of the tube, said spacers being joined to the discharge electrodes at points remote from the discharge surface thereof, and subsequently melting and vaporizing the spacers with the application of electrical energy.

2,450,198
STIRRUP FOR JACK STICKS IN LOOMS
Clarence E. Kennett, Warrenville, S. C.
Application September 20, 1947, Serial No. 775,218
3 Claims. (Cl. 139—88)



1. In a loom having a plurality of treadles and a plurality of jack sticks and jack straps connecting the treadles to the jack sticks, each jack stick having secured thereto and projecting downwardly therefrom a pair of spaced members, a horizontally disposed member spanning the distance between and secured to the lower ends of the downwardly projecting spaced members and a collar member slidably mounted for movement along the horizontally disposed member and on which a jack strap is adapted to be mounted, and means for adjustably securing the collar member in position on the horizontally extending member.

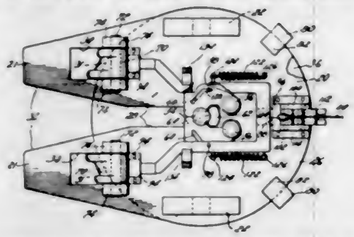
2,450,199
GOVERNOR
William E. Leibing, Santa Barbara, Calif.
Application June 24, 1946, Serial No. 679,020
7 Claims. (Cl. 123—103)



1. In a governor for limiting the maximum speed of an internal combustion engine, the engine having speed control means associated with the carbureter thereof for regulating the rate of flow of combustible fuel mixture to the engine, the combination of a power cylinder adapted to limit the range of operation of the speed control means, conduit means connected to the intake manifold of the engine adapted to energize the power cylinder by partial vacuum, a valve device including a valve element interposed in the conduit means whereby the valve element may regulate action of the power cylinder, a fluid pump driven by the engine adapted to deliver fluid at

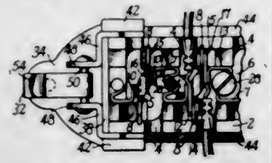
increasing pressure in response to increasing speed of the engine, means responsive to said fluid pressure adapted to move the valve element toward open position, and resilient means nor-

mally acting to oppose the pressure responsive means whereby the valve element is maintained in a closed position until the engine speed exceeds a predetermined maximum.



2,450,200
LEVELING AND CONTOURING MACHINE
Niel C. Locke, Lockeford, Calif.
Application January 22, 1945, Serial No. 573,917
10 Claims. (Cl. 37—178)

1. An earth working machine comprising a frame supported above and for movement along the ground, a transverse grader blade disposed beneath the frame, means suspending the blade from the frame for horizontal swinging movement between reversely angled positions, and separate transversely spaced supporting means on the frame adapted to detachably couple with a corresponding end portion of the blade when the latter is angled to dispose said end portion forward; the blade being suspended from the frame for tilting adjustment transversely of the direction of travel whereby to level said blade, each of said separately supporting means including a carriage in a substantially vertical plane to which the corresponding blade end is adapted to connect, a power cylinder operative to raise or lower said carriage in a substantially vertical plane an operator's seat on the frame, and manually actuated means arranged to releasably couple the ends of said blade with the corresponding supporting means, said manually actuated means being remote controlled by the operator from the seat.

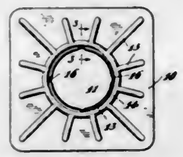


2,450,201
FIFTH WHEEL ASSEMBLY
Otis A. Logan, Kansas City, Mo.
Application February 12, 1945, Serial No. 577,556
4 Claims. (Cl. 280—33.05)

1. In a fifth wheel assembly, a tractor plate having a king pin receiving slot with a pin seat at its forward end; a circular trailer plate having a centrally depending king pin and an annular peripheral flange; fixed dogs carried at the forward edge of said tractor plate to engage the forward periphery of said trailer plate and piv-

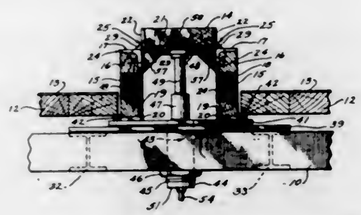
otally mounted dogs adjacent the rear end of said trailer plate; and resilient means to normally urge said pivoted dogs to engage the annular flange of said trailer plate and manually operable means to move said pivoted dogs below the upper surface of said tractor plate.

2,450,202
ELECTRICAL CONNECTOR
James C. Macy, New Cumberland, Pa., assignor to Aircraft-Marine Products Inc., Harrisburg, Pa., a corporation of New Jersey
Application October 27, 1944, Serial No. 560,606
12 Claims. (Cl. 200—51)



4. A terminal block which comprises an insulating block having transverse channels therein and communicating centrally located longitudinal channels, interconnectors in said transverse channels each having oppositely extending blade portions lying in spaced parallel planes, an integral centrally positioned saddle portion connecting and offsetting said blade portions and clip portions adjacent said saddle portion integrally connected to the blade portions respectively at the bottom edges thereof and extending over the face of the blade portion at a distance therefrom approximately the thickness of said blade portion and a contact lug extending laterally from each clip portion into said longitudinal channel in overlapping relation with the contact lug of an interconnector in an adjacent transverse channel, and a bridging connector removably engaged between said adjacent contact lugs whereby removably to connect said adjacent interconnectors, and an insulating cover closing said channels, insulating said interconnectors and locking said terminal connectors against disengagement from said interconnectors.

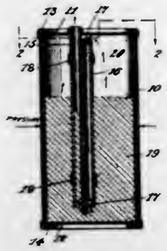
2,450,203
RADIATOR FIN CONSTRUCTION
David E. Morgan, Philadelphia, Pa., assignor to Warren Webster & Company, Camden, N. J., a corporation of New Jersey
Application December 29, 1945, Serial No. 638,333
1 Claim. (Cl. 257—262.16)



Heat exchanging apparatus comprising a metal tube, a plurality of closely spaced flexible thin

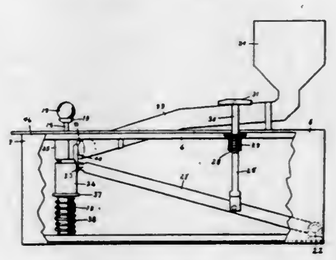
sheet metal fins, each fin being provided with an aperture for receiving the tube, an annular integral spacing flange on each fin and surrounding the tube at the aperture, the tube being of such diameter that it presses radially outwardly against the inside surfaces of said flanges, and whereby the flanges securely embrace the tube, each fin being formed with a continuous an-

nular corrugation surrounding and in spaced relation to the aperture thereof, the area of the fin within such corrugation being a narrow flat annular portion in a plane perpendicular to the axis of the tube, and a plurality of spaced corrugations being formed on each fin and extending respectively radially outward from the annular corrugation.



2,450,204
TRUCK BODY AND BOLSTER
Whetstine B. Pridy, Long Beach, Calif.
Application August 6, 1945, Serial No. 609,057
6 Claims. (Cl. 296—28)

1. A platform for a truck or the like, comprising a relatively fixed platform interrupted at a point in its length by an intermediate vertically movable platform section normally lying in the same horizontal plane as the fixed platform section to supplement the same and form a continuous floor structure, a pivot post secured centrally of the movable platform section, a bearing receiving the post and carried by the fixed section, means for moving the post vertically while lifting the movable platform section to a plane above the fixed platform section whereby the movable platform section may swing horizontally around the vertical axis of said post and over the fixed platform section, and a guide structure carried by the fixed platform section and receiving the bearing for the post whereby the post in its bearing may move longitudinally of the platform when the fixed platform section is lifted above the movable platform section.

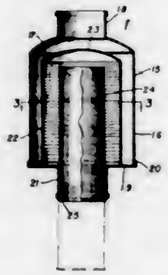


2,450,205
COMPRESSIBLE POWDER DISPENSER
William H. Rose, Jersey City, N. J.; Hudson County National Bank executor of said William H. Rose, deceased
Application January 8, 1946, Serial No. 639,778
7 Claims. (Cl. 222—193)

1. A powder dispenser comprising an elongated casing having flexible resilient side members and rigid end members; a powder-exit hollow tubular member open at both ends and having its upper open end positioned outside said casing adjacent one end member and its lower open end positioned inside said casing adjacent the other end member, thus forming an exit opening for said

casing; an air-circulating tubular member within said casing, the lower end of which is adjacent to the lower end of said powder-exit member and means adapted to allow the passage of air through said air-circulating tubular member while preventing the passage of powder therethrough.

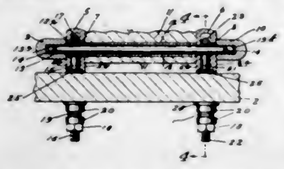
2,450,206
GOLF TEEING APPARATUS
James F. Shouse, Moline, Ill.
Substituted for application Serial No. 329,595, April 15, 1940. This application October 1, 1945, Serial No. 619,466
1 Claim. (Cl. 273—33)



A golf teeing apparatus, comprising a frame, a casing therefor, adapted to be sunk in the ground, a tubular member supported vertically in said frame, provided with a pair of vertically extending slots in its walls, diametrically opposed to each other, a plunger vertically movable in said tubular member, provided with a pair of slots in register with said first-named slots a compressison spring beneath said plunger yieldably supporting the same, a golf tee mounted on said plunger, a chute mounted in said frame for the delivery of a series of balls to a point to roll on to said tee, a sleeve on said tubular member, carrying a closure for the end of said chute, and provided with a pair of slots in register with the first-named slots, a coiled spring beneath said sleeve holding the same normally in elevated, chute-closing position, a lever pivoted at one end in said frame, with its free end having play in said slots, connections between the movable end of said lever and said plunger, and foot pedal connections with said lever, operable from above the casing.

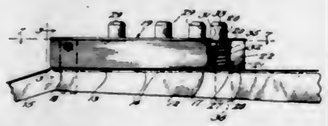
2,450,207
NAIL FILE
Alexander Silverman, Pittsburgh, Pa.
Application March 13, 1945, Serial No. 582,500
1 Claim. (Cl. 132—76.4)

A one-piece nail file made of thin strip material having an angular transverse section throughout its entire length, having a substantially smooth handle and integral therewith a body portion at least the inner side of which is abrasive, the angular transverse section having a width/depth ratio between about 5:1 and about 2:1.



2,450,208
FILTER
Thomas Harold Slater, Fairview, Ill.
Application May 20, 1947, Serial No. 749,236
1 Claim. (Cl. 210—164)

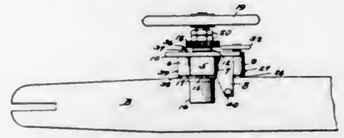
A filter adapted to be introduced in the cooling system of a liquid cooled internal combustion engine between the cooling liquid discharge of the engine block and the radiator, comprising a tubular body, end walls at opposite ends of the body, an outstanding tubular nipple on each end wall communicating with the interior of the body, a foraminous cylinder fixed at one end to an end wall of the body and extending toward the opposite end wall thereof in concentric spaced relation to the nipples, a cap closing the end of the foraminous cylinder in spaced relation to the end wall opposite that to which the cylinder is fixed, a pipe slidably fitted into the nipple carried by the end wall to which the foraminous cylinder is fixed, said pipe being adapted to project into the foraminous cylinder and an outstanding annular flange on the pipe for engaging the end of the said nipple and limiting the distance that the pipe may enter the cylinder.



2,450,209
HINGE CONSTRUCTION FOR TOILET SEATS
Peter J. Sperzel, Minneapolis, Minn., assignor to Sperzel Company, Minneapolis, Minn., a corporation of Minnesota
Application June 28, 1946, Serial No. 680,263
3 Claims. (Cl. 4—236)

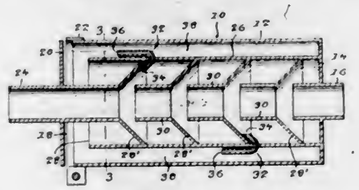
1. A friction hinge construction for independently connecting a toilet seat element and a toilet cover element to one another and to an underlying toilet bowl, said friction hinge construction comprising laterally spaced hinge brackets carried by said bowl and having aligned apertures, a hinge flange carried by one of said elements projecting between said hinge brackets, a horizontal passage through said flange coaxial with the aligned apertures in the hinge bracket, a tubular hub projecting laterally from the flange and forming an extension of said passage, said hub being seated in the aperture of one of the hinge brackets, a pair of laterally spaced hinge lugs carried by the other of said elements and projecting one on the outer side of each of said hinge brackets, a hinge pin secured to one of said spaced hinge lugs journalled for rotation in said tubular hinge sleeve, and having one end seated

in the aperture of the other of said hinge brackets, a pair of spaced anchoring bolts extending loosely through said bowl adjacent said spaced bearing brackets, said anchoring bolts being equipped with head acting portions, one of which frictionally engages the hinge sleeve, and the other of which frictionally engages the hinge pin, and means on the opposite end of said anchoring bolts for yieldingly biasing the bolts in a direction to cause frictional braking engagement between said hinge pin and hinge sleeve and its respective bearing seat.



2,450,210
STRING DEPRESSOR FOR STRINGED MUSICAL INSTRUMENTS
Howard L. Sprague, New York, N. Y.
Application March 16, 1946, Serial No. 654,896
1 Claim. (Cl. 84—315)

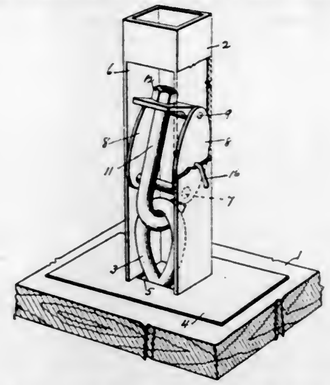
A string depressor for a stringed musical instrument comprising a hollow rectangular box adapted to be mounted on the finger board of an instrument of the lute type adjacent the head thereof, the wall of the box remote from the instrument having spaced apertures extending therethrough, the wall of the box adjacent the instrument having spaced parallel slots therein which lie perpendicular to the longitudinal axis of the box, a stop within the box aligning with each aperture, fingers on the stops extending through the slots, a push-button fixed to each stop and projecting from its respective stop through an aperture in a direction opposite that in which the fingers project and compression coiled springs, each bearing at one end on a stop and at its opposite end on the inner face of the wall of the box adjacent the instrument to hold the fingers out of contact with the strings of the instrument.



2,450,211
CHAIN-SAW BAR CONDITIONER
Albert F. Stone and Ernest A. Hayden, Callahan, Calif.
Application January 31, 1947, Serial No. 725,696
8 Claims. (Cl. 153—28)

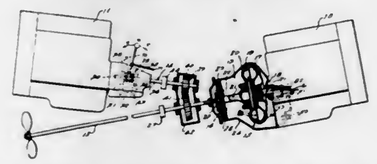
1. A conditioner for chain-saw bars, comprising a block, an eccentric bushing mounted for rotation in the block, a lever fixedly connected to the eccentric bushing, means for holding the lever in positions of laterally swingable adjustment, a shaft rotatable in the eccentric bushing, a second shaft rotatable in the block, flared rollers on the shafts, said rollers being spaced to receive, for passage between the flared portions thereof, a chain-saw bar, means for simul-

taneously rotating the shafts in opposite directions, adjustable plugs carried by the block at opposed sides of the rollers and in a common plane with said bar, and means adapted to adjust said plugs against the bar simultaneously and in equal amounts, whereby to engage the bar and maintain it in predetermined positions of adjustment in relation to the rollers while being passed therebetween.



2,450,212
MUFFLER
Joseph J. Thomas, Los Angeles, Calif.
Application February 12, 1946, Serial No. 647,033
4 Claims. (Cl. 181—43)

1. A device of the character described comprising a housing; a tubular shell fixed to and extending longitudinally of said housing interiorly thereof; the shell being spaced from the housing to provide an air space therebetween; apertured injection cones arranged in spaced relation with one another and secured to the shell interiorly thereof; means for discharging exhaust gases into the interior of the shell for flow through said cones; air ducts having their outlet ends discharging into the interior of the shell; the ducts extending outwardly of said shell and having their inlet ends disposed between said shell and said housing; and means for admitting air between said shell and housing for flow of the air through said ducts to the interior of said shell for entraining into the stream of exhaust gases flowing through said cones.

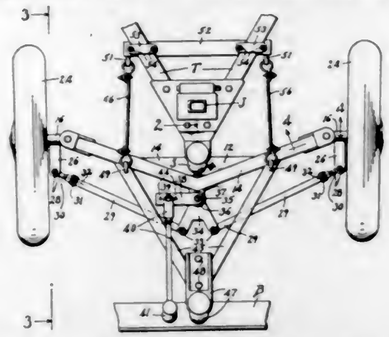


2,450,213
SEAT ANCHORING DEVICE
Robert S. Turner, Oklahoma City, Okla.
Application October 30, 1944, Serial No. 561,133
6 Claims. (Cl. 45—137)

1. The combination with a floor member having an upwardly projecting eye, and with a hollow leg seated over said eye, of: parallel members pivoted at their similar ends to the leg; a crank member pivoted between the opposite ends of said members; and a hook engaging said eye and having the end of its shank engaged with said crank, said crank adapted to swing with the parallel members, and to carry said shank end

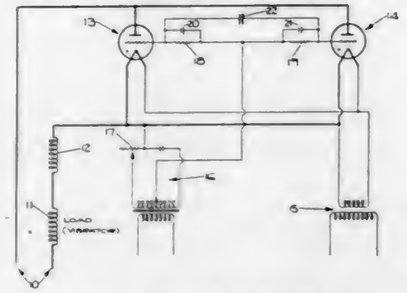
beyond the pivot point of said members to said leg.

2,450,214
DUAL DRIVE MECHANISM
Marsden Ware, Huntington Woods, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application March 27, 1944, Serial No. 528,211
5 Claims. (Cl. 74—389)



1. In drive mechanism, a driven shaft, a pair of drive shafts, a transmission mechanism for connecting one of the drive shafts to selectively rotate the driven shaft in forward or reverse drive, another transmission mechanism for connecting the other drive shaft to rotate the driven shaft including a fluid clutch, shift means operable to select the drive through the first mentioned transmission mechanism, means for feeding fluid to the clutch, and means controlled by said shift means to effect diversion of fluid from the clutch when the first mentioned transmission mechanism is conditioned for reverse drive.

2,450,215
DOLLY FOR TRAILERS AND THE LIKE
William A. Wilson, Glendale, Calif.
Application July 27, 1946, Serial No. 686,773
6 Claims. (Cl. 280—33.55)



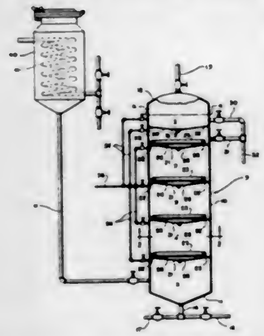
1. In a dolly for effecting a load supporting and draft connection between a towing vehicle and a vehicle to be towed, an axle, posts fixed to said axle, sleeves vertically movably and turnably supported on said posts, spindles carried by said sleeves, wheels mounted on said spindles, spring means yieldably resisting relative vertical movement of said posts and sleeves, means connected with said axle affording draft connections with the towing and towed vehicles in such manner that the weight of the forward end of the towed vehicle is supported by said wheels through said spring means, and steering gear associated

with said axle, sleeves and spindles, including means affording connection with said towing ve-

hicle whereby said wheels will track with the steering of said towing vehicle.

2,450,216
ELECTRIC CONTROL CIRCUIT
Harold W. Ainsworth, Galloway, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application May 21, 1946, Serial No. 671,152
4 Claims. (Cl. 175—363)

1. An electrical circuit including a source of alternating current, a load, a pair of gaseous electron grid controlled discharge tubes connected in parallel to pass half-wave current impulses to said load, means operable to produce substantially equal distribution of the current through said tubes by causing them to be alternately conductive and non-conductive whereby the load is substantially equally divided between them, said means including a condenser connecting the grids of said tubes together, and potential dividing circuit means for the grid circuits of said tubes.



2,450,217
TEAT DRAINING TUBE
Harvey A. Alcorn, Adair, Iowa
Application November 16, 1944, Serial No. 563,773
1 Claim. (Cl. 128—350)

A teat draining member for cows and the like comprising, an elongated rod-like member adapted to be inserted and retained in a teat milk duct, said member having one end tapered to a blunt point and provided with an enlarged head on the other end, a plurality of open channels extending in spiral convolutions throughout the length of said member to permit the free flow of milk through said duct completely outside said member and in contact with the wall of the duct, said channels being substantially of semi-elliptical concave cross section with their aggregate area being substantially equal to the exposed surface

area of said member, and those edges defining the juncture of said channels with the outer surface of said member being rounded and undercut substantially as described.

2,450,218
APPARATUS FOR CONTINUOUS FERMENTATION
Francisco Alzola Victorero, Cardenas, Cuba
Application September 5, 1946, Serial No. 694,990
In Cuba December 21, 1945
4 Claims. (Cl. 195—144)

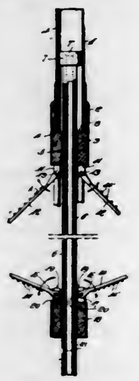
1. A fermenting apparatus for gas-evolving worts, comprising a fermenting vessel, partitions dividing the vessel into a succession of superimposed fermentation compartments, each partition having an aperture for permitting restricted upward movement of wort from the inferior compartment to the superior compartment, conduits for supplying fresh wort to a lower compartment and for withdrawing fermented wort from an upper compartment and means on each partition spaced from the aperture for collecting evolved gas and discharging it in regulated amounts into the superior compartment.

2,450,219
TEXTURE-STABLE LITHIUM BASE GREASE
Harry V. Ashburn, Glenham, and Oney P. Puryear, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application April 10, 1945,
Serial No. 587,622
3 Claims. (Cl. 252—41)

1. A method of preparing at temperatures attainable in a steam-jacketed kettle a texture-stable gel-type grease consisting of lithium soap as the entire soap content thereof, said lithium base grease being resistant to substantial lowering in consistency when subjected to high shearing stresses of the character herein described, as well as being resistant to substantial hardening after being subjected to said high shearing stresses, which comprises saponifying with a basic lithium compound at a temperature of about 170–200° F. of a blend of a major proportion of a soap-forming essentially saturated hydroxy fatty acid glyceride and a minor but substantial proportion of a soap-forming saturated fatty acid, the latter being sufficient in amount to prevent any material increase in consistency due to high shearing stress of the final grease product referred to hereinbelow, as determined by a decrease of not more than a few points in the miniature pentration values obtained before and after subjecting the said grease to the described dynamic shear test, then heating the resulting saponified reaction product above about 270° F. but not substantially above 300° F. for a period of time to dehydrate the product and render the same translucent, then reducing the heat and adding an oleaginous vehicle to the dehydrated product as the latter cools to at least about 200° F. and the desired consistency is obtained, and finally drawing the resultant mix to obtain a glossy buttery homogeneous gel-type grease as a final product.

2,450,220
TEXTURE-STABLE LITHIUM BASE GREASE
Harry V. Ashburn, Glenham, and Oney P. Puryear, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application May 3, 1945,
Serial No. 591,842
2 Claims. (Cl. 252—41)

1. A method of preparing at temperatures attainable in a steam-jacketed kettle, a texture-stable and water-resistant gel-type grease consisting of lithium soap as the entire soap content thereof, said lithium base grease being resistant to substantial softening and also resistant to substantial hardening when subjected to high shearing stresses of the character herein described, which comprises saponifying with a basic lithium compound at a mildly elevated temperature a blend consisting of 35–50% by weight of a soap-forming hydroxy fatty acid, and 65–50% by weight of a soap-forming saturated fatty acid, then heating the resulting saponified reaction product to a higher temperature not substantially exceeding about 310° F. to dehydrate the same, thereafter lowering the temperature and adding an oleaginous vehicle as the product cools and until the desired consistency is obtained, and finally drawing the resulting mix to obtain the texture-stable and water-resistant gel-type grease as a final product.



2,450,221
SHEAR-RESISTANT GREASE
Harry V. Ashburn, Glenham, Robert S. Barnett, Beacon, and Oney P. Puryear, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 21, 1945,
Serial No. 611,908
8 Claims. (Cl. 252—41)

1. A lubricating grease composition comprising as the essential and at least major portion of the lubricating base a high molecular weight high boiling liquid aliphatic dicarboxylic acid ester within the lubricating oil viscosity range and possessing lubricating properties, and sufficient metal soap of a soap-forming fatty material selected from the group consisting of hydroxy fatty acids and hydroxy fatty acid glycerides to thicken said lubricating base, said grease composition being texture-stable under high shearing stress.

2,450,222
SHEAR-RESISTANT GREASES
Harry V. Ashburn, Glenham, Robert S. Barnett, Beacon, and Oney P. Puryear, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 7, 1945,
Serial No. 615,074
8 Claims. (Cl. 252—42.1)

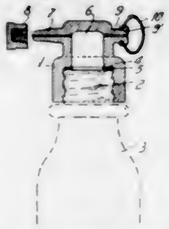
1. A lubricating grease composition comprising as the essential and at least major proportion of the lubricating base an oil-soluble high molecular weight high-boiling liquid aliphatic dicarboxylic acid ester within the lubricating viscosity range and possessing lubricating properties, and sufficient lithium soap of soap-forming fatty material to thicken said lubricant base, said soap-forming fatty material consisting of more than 50% by weight of a hydroxy soap-forming fatty material selected from the group consisting of hydroxy fatty acids and hydroxy fatty acid glycerides, said grease composition being texture-stable under high shearing stress.

2,450,223
WELL REAMING APPARATUS
William R. Barbour, Atlanta, Ga.
Application November 25, 1944, Serial No. 565,121
13 Claims. (Cl. 255—76)

1. A well reaming apparatus comprising a rotary drive member, a reamer shaft, a reaming assembly slidably mounted on and adapted to rotate with said shaft comprising upper and lower collars, an articulated cutting arm hinged intermediate its length and having its ends attached, respectively, to the upper and lower collars, said arm having collapsed and expanded positions, co-acting means between the lower end of the arm and shaft to prevent downward movement of said assembly, said means including a cam element on said arm normally projecting into a seat formed in said shaft releasable when said arm has substantially reached its predetermined expanded position, and means including a stationary member for rotatably supporting the lower end of said shaft.

2,450,224
METHOD OF PREPARATION OF BARIUM SOAP GREASES

Eric A. Bergmann, Fishkill, N. Y., Harry V. Ashburn, Waynesburg, Pa., and George W. Eckert, Glenham, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware



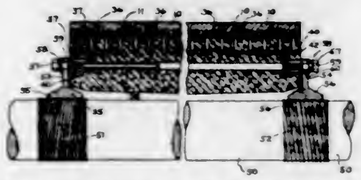
No Drawing. Application December 6, 1946, Serial No. 714,640
7 Claims. (Cl. 252—39)

1. A method of preparing a normal barium soap grease composition which comprises saponifying a soap-forming fatty acid with not more than the stoichiometric equivalent of barium hydrate in the presence of a mineral oil possessing a VGC of at least 0.870 to produce a saponification product of normal barium soap, dehydrating the saponification product at temperatures not in excess of the melting point of the soap base, cooling the dehydrated product with continuous stirring to a temperature below the critical transition temperature of the grease base without reducing the concentration of the soap component to substantially below 40%, thereafter adding mineral lubricating oil to obtain the desired consistency and drawing the resulting grease composition.

2,450,225
DROPPER

Cayetano Bernabó, Buenos Aires, Argentina

Application August 13, 1946, Serial No. 690,169
In Argentina April 24, 1946
3 Claims. (Cl. 222—209)

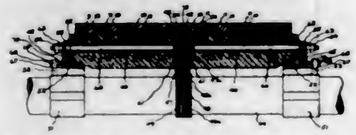


1. A dropper, comprising a head adapted to be fitted to a container and provided at one side with an outlet for the drops and, at the other side, with a duct, an air compressing element communicating with said duct, and the upper portion of said head housing a chamber communicating, at one side, with the duct of the air compressing element and, at the other side, with the drop outlet.

2,450,226
PULPSTONE

Hugo W. H. Beth, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application May 18, 1946, Serial No. 670,663
2 Claims. (Cl. 51—206.4)

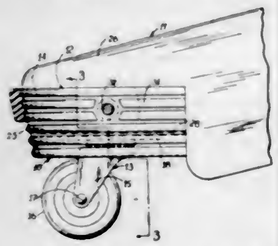


1. A pulpstone comprising a plurality of blocks of bonded abrasive material arranged to form a hollow cylinder, a concrete core inside of said cylinder, means securing said blocks to said concrete core, a plurality of rods parallel to the axis of the cylinder embedded in the concrete core at equal distances from the axis of the core, screw threads on the outside of each of said rods at the ends thereof, and heavy metal lugs having tapped holes at each end screwed upon said rods at each end and said lugs being embedded in the concrete core just inside the end faces thereof, the outer tapped holes of the lugs being uncovered whereby bolts may be screwed into the lugs to hold and drive the pulpstone.

2,450,227
PULPSTONE

Hugo W. H. Beth, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application May 18, 1946, Serial No. 670,664
5 Claims. (Cl. 51—206.4)

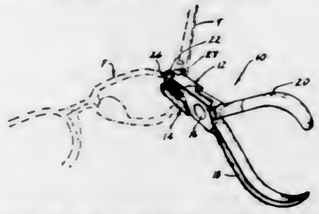


1. A pulpstone comprising a plurality of blocks of bonded abrasive material arranged to form a hollow cylinder, a hollow concrete center inside said cylinder and supporting it, bolts embedded in said blocks and in said center attaching said blocks to said concrete center, a second plurality of blocks of bonded abrasive material similarly arranged, a second concrete center supporting said second plurality of blocks, bolts embedded in said second plurality of blocks and in said second center attaching said second plurality of blocks to said second center, said centers being dished out annularly, and pipes extending parallel to the axis of said centers and embedded in said concrete, whereby each of the concrete centers can be attached to flanges by bolts through the pipes, one flange of each center being in the dished out annular portion and the other flange of each center being opposite it.

2,450,228
CASTER UNIT

Lawrence E. Blazey, Bay Village, Ohio, assignor, by mesne assignments, to Office Furniture & Fixtures, Inc., Washington, D. C., a corporation of Delaware

Application September 17, 1945, Serial No. 616,898
2 Claims. (Cl. 16—29)



1. In combination with a caster unit, a laterally elongated generally U-shaped metal shell open at the top and at one end thereof and provided with side walls adapted to laterally receive therebetween a portion of a wooden chair leg or the like, said side walls depending below the leg receiving portion of said shell, a bottom wall extending transversely of said shell at a point above the lower edges of said side walls a downwardly extending flange on said bottom wall and attached to said side walls whereby a caster member may be attached to said bottom wall and carried by said shell.

2,450,229
OPHTHALMOLOGIST'S TOOL

Herman August Blohm, Washington, D. C.

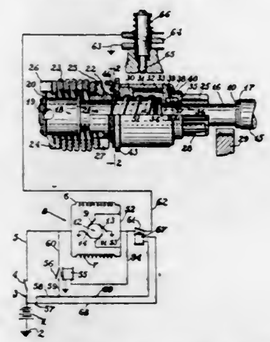
Application July 11, 1945, Serial No. 604,368
4 Claims. (Cl. 81—3.6)

1. A tool of the character described comprising a pair of pliers having companion gripping jaws pivotally connected to each other, one of said jaws having an outer end portion which is narrower than the outer end portion of the companion jaw, said first mentioned end portion being offset laterally inwardly of at least one side of the end portion of the companion jaw, said jaws having companion confronting grooves in their confronting surfaces disposed longitudinally inwardly of said end portions of the jaws and extending transversely of said jaws, said one of the jaws having a portion which is wider than said end portion thereof and, said last mentioned portion being provided with one of said grooves, said grooves having open ends at the adjacent sides of the jaws, said grooves increasing gradually in width from the longitudinal median line of the pliers to said open ends of the grooves.

2,450,230
GRINDING WHEEL CHUCK

Alonzo Oakleigh Bush, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application March 16, 1946, Serial No. 654,945
1 Claim. (Cl. 51—209)



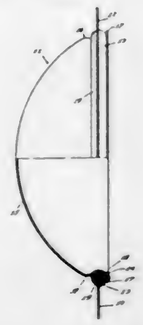
A chuck for holding hollow cylindrical grinding wheels comprising a disc shaped plate, a lip on the periphery of and integral with said plate, a portion of said plate inside of said lip constituting a seat, a continuous resilient ring made of deformable rubber like material of a diameter and having a surface to fit said seat inside of said lip, a continuous rigid clamping ring having a portion overlying said lip with screw holes therethrough and said clamping ring having another portion overlying said resilient ring, and screws extending through said holes in said rigid clamping ring and into said lip and, when tightened, compressing said rigid clamping ring against said resilient ring which is squeezed between and by the portion of the rigid ring overlying it and the seat, thus forcing some material of the resilient ring inwardly into clamping engagement with a hollow cylindrical grinding wheel.

2,450,231
ENGINE STARTER

James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware

Original application June 23, 1944, Serial No. 541,702. Divided and this application July 1, 1946, Serial No. 680,791
2 Claims. (Cl. 74—7)

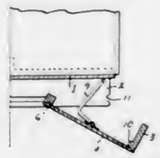
1. In an engine starter drive, a power shaft, a screw shaft driven thereby, a nut threaded on the screw shaft, a pinion slidably journalled on the power shaft for movement into and out of engagement with a gear of an engine to be started, means including a barrel member for transmitting longitudinal movement from the nut to the pinion, means for arresting the longitudinal movement of the pinion, clutch members connected to the barrel and pinion adapted to be forced into driving engagement by the nut when the meshing movement of the pinion is arrested yielding means normally holding the clutch members disengaged, and means for limiting the separation of the clutch members, said last mentioned means serving also to transmit a frictional drag from the pinion to the barrel member.



2,450,232
JOINT STRUCTURE

William J. Campbell, Indianapolis, Ind., assignor to Climax Machinery Company, Indianapolis, Ind., a corporation of Indiana

Application November 29, 1945, Serial No. 631,552
8 Claims. (Cl. 220—61)



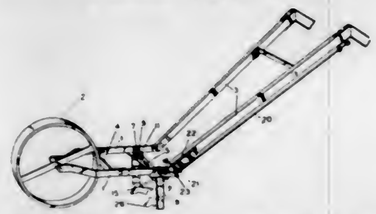
1. A joint structure comprising a first member formed with an aperture therein and a closure member adapted to close said aperture, said first member being formed with an offset flange surrounding said aperture, said closure member having a body contoured and dimensioned to pass snugly through said aperture, an outwardly-projecting perimetral flange at the rear end of said body having external dimensions exceeding the dimensions of said aperture, whereby, when said closure member body is passed through said aperture, said closure member flange will engage the flange on said first member to limit movement of said closure member in one direction, said closure member further being formed immediately forward of its flange, with a perimetral, outwardly-opening channel having a radial di-

mension less than the radial dimensions of said closure member forwardly and rearwardly of said channel, and a resilient element removably re-

ceived in said channel and engaged between said closure member body and the flange of said first member to hold said closure member against retrograde movement.

2,450,233
TILTABLE UTENSIL DRAWER
Joseph R. Cummings, Venice, Calif.
Application October 9, 1945, Serial No. 621,204
2 Claims. (Cl. 312—181)

2. A utensil container including spaced end walls, each of said end walls being provided with a longitudinal groove, a forwardly-slidable and swingable bottom mounted intermediate said end walls, a longitudinal bar carried by said bottom and having its ends extending into said grooves, and a rearwardly and downwardly bent spring pivotally connected to each of said end walls and to said bottom to thereby prevent said bottom from swinging too far when in its forwardly-advanced position.

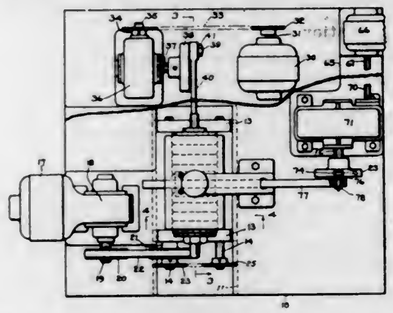


2,450,234
AUTOCONDENSATION POLYMERS OF UNSATURATED GLYCIDYL ETHERS AND METHOD OF PRODUCING SAME
Theodore W. Evans and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application December 7, 1943, Serial No. 513,298
8 Claims. (Cl. 260—80)

1. A process for the production of an allyl polyether of a polyglycerol having one allyloxy radical attached to each glycerol unit which comprises bringing stannic chloride into contact with allyl glycidyl ether in the presence of an organic solvent diluent under substantially anhydrous conditions.

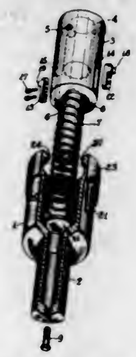
2,450,235
FRACTIONAL SEPARATION OF FATTY OIL SUBSTANCES
William P. Gee, Plainfield, N. J., assignor to Texaco Development Corporation, New York, N. Y., a corporation of Delaware
Application April 5, 1947, Serial No. 739,541
9 Claims. (Cl. 260—428.5)

7. In the separation of solidifiable constituents from fatty substances contained in fatty oil by continuous vacuum filtration in the presence of a solvent liquid from which solidifiable constituents can be crystallized without substantial alteration in their essential state, said filtration involving forming, washing, drying on and discharging from a rotating drum filter surface a filter cake of solids in a continuous recurring cycle, the steps comprising chilling said fatty substance mixed with said solvent to a filtering temperature at which crystallization of desired solidifiable constituents occurs, forming at said filtering temperature a chilled mixture comprising a liquid phase of non-crystallized fatty constituents dissolved in solvent and a solid phase of crystallized fatty constituents, said solid phase amounting to about 2 to 6% by volume of the liquid phase at said filtering temperature, passing a stream of said mixed phases, the solid phase being uniformly dispersed throughout the liquid phase, to a continuous rotary vacuum drum filter, separating liquid phase as filtrate and forming a filter cake of solid phase, washing said filter cake in situ to displace retained liquid phase, continuously discharging filtrate from said filter, and continuously discharging washed filter cake from the filter substantially free from fatty constituents solidifying either below or above said filtering temperature.



2,450,236
HAND PROPELLED WHEELED CULTIVATOR
Otto Hoffman, Portland, Oreg.
Application December 29, 1945, Serial No. 637,984
2 Claims. (Cl. 97—59)

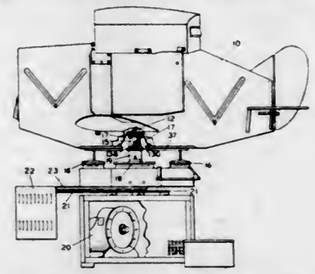
2. A cultivator including a frame, a rockable tool carrying bar mounted in the frame, independent tool carrying members connected to the bar and responding to the pivotal movement of the bar, the bar having outstanding pins in spaced relation projecting beyond the frame, and an adjustable member mounted on the frame to be selectively engaged by either of said pins to limit the swinging movement of the bar and thereby of the tool carrying members to position the tool carrying members at a desired angle to the frame.



2,450,237
ABRASIVE MACHINE
Herbert S. Indge, Westboro, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application March 8, 1946, Serial No. 652,974
13 Claims. (Cl. 51—58)

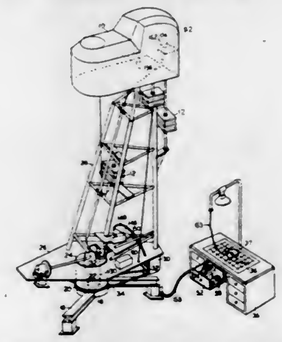
8. In apparatus of the class described, a pair of rollers mounted on parallel axes adapted to rotate a work piece by frictional engagement therewith, means to rotate said rollers in the same angular direction, a partial cylindrical shell whose

axis is parallel to the axis of the rollers, and means to oscillate said shell substantially about its own axis.



2,450,238
TAP HOLDER
Benjamin H. Jordan, Elmira, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 15, 1944, Serial No. 535,670
3 Claims. (Cl. 10—89)

1. In a yielding threading tool holder a socket member having a cylindrical extension, a sleeve member having a bearing for receiving the cylindrical extension of the socket member and having longitudinal slots, keys fixed to the socket member having projections traversing said slots, said sleeve having a circumferential recess communicating with the ends of the slots and providing clearance for rotation of the key projections therein, and a spring in the sleeve bearing on the socket member and urging the socket member in a direction to bring the key projections into registry with the recess.



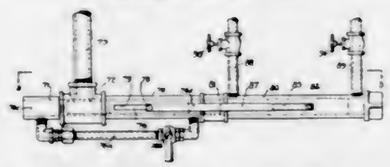
2,450,239
AVIATION TRAINER
Karl A. Kall, Montrose, Pa., assignor to Link Aviation, Inc., a corporation of New York
Application July 29, 1942, Serial No. 452,739
33 Claims. (Cl. 35—12)

29. In an airplane trainer including a turnable cockpit, and control means for turning the cockpit, the combination therewith of a pair of simulated manifold pressure gauges to indicate assumed manifold pressures, a plurality of independent means in said trainer for actuating each of said simulated gauges, a plurality of simulated throttle control levers in said trainer, one of said simulated throttles being associated with each

of said actuating means, means for causing said control means to rotate said trainer according to the relative positions of said throttles, and means for causing each of said simulated gauge actuating means to actuate its associated gauge to register in accordance with the position of its associated throttle.

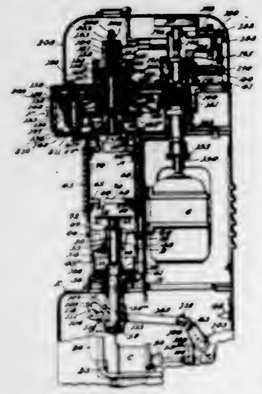
2,450,240
RADIO DIRECTION FINDING MEANS FOR AVIATION TRAINERS
Karl A. Kall, Montrose, Pa., assignor to Link Aviation, Inc., Binghamton, N. Y., a corporation of New York
Original application July 30, 1943, Serial No. 496,738. Divided and this application June 19, 1944, Serial No. 540,977
2 Claims. (Cl. 35—10)

1. In a grounded navigation training system of the type including a fuselage rotatably mounted upon a stationary base and a flight simulating device remotely situated from and controlled by said fuselage and arranged to travel over a chart to indicate the assumed geographical position of the fuselage, means for simulating the operation of radio direction finding equipment carried by planes in actual flight, said means comprising, in combination, a signal source connected to a directional transmitting antenna unit, said directional transmitting antenna unit having a part movable to establish a directional field variable in accordance with the assumed bearing of said fuselage from a radio station as determined by the location of said flight simulating device upon said chart, a directional receiving antenna



disposed in the field established by said transmitting antenna unit, signal receiving means in said fuselage connected to said directional receiving antenna, a Selsyn-type receiver located adjacent said directional receiving antenna and mechanically connected thereto for moving the same, a Selsyn-type transmitter electrically connected to said Selsyn-type receiver, means operated by the rotation of said fuselage relative to said stationary base connected to said Selsyn-type transmitter for actuating the same, means within said fuselage selectively operable by an operator and differentially combined with said means operated by the rotation of said fuselage for operating said Selsyn-type transmitter, and index means within said fuselage operable in response to an operation of said selectively operable means within said fuselage.

2,450,241
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 15, 1946, Serial No. 669,943
8 Claims. (Cl. 139—96)

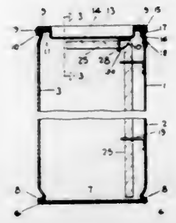


1. In loom harness, a plurality of heddles made of thin flat strips of metal each provided with means at the top and bottom for mounting the same in the heddle frames and with a warp eye intermediate the top and bottom, each alternate heddle being provided with a slight bend adjacent the warp eye, and said bend being adapted to bear against a portion of an adjacent heddle to resiliently space the heddles.

2,450,242
VALVE
William John Klod, Weehawken, N. J.
Application March 25, 1944, Serial No. 528,026
3 Claims. (Cl. 137—139)

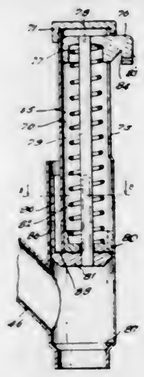
1. A valve comprising in combination, a cylinder, a piston within said cylinder, a pressure fluid inlet formed in an outer end of said cylinder, a pressure fluid outlet extending at right angles to said inlet and constituted by an opening which is formed in a side of said cylinder and which is adapted to be closed and opened by said piston, pressure conducting means interconnecting the portions of said cylinder forward and rearward of said piston, valve means controlling said pressure conducting means, another cylinder in alinement and in direct open communication with the first mentioned cylinder and located behind the inner end thereof, means reducing the diameter of the first cylinder relative to the second said cylinders each having longitudinal slots therein, another piston in said other cylinder, wrist pins on said pistons extending through the cylinder slots, means connecting said wrist pins, and means connected with said other cylinder for introducing an actuating medium thereinto and into engagement with any one of the two end surfaces of said other piston.

2,450,243
CONTAINER SEALING MACHINE HAVING SEAMING MECHANISM ACTUATED BY FLUID PRESSURE OPERATED MEANS RESPONSIVE TO VACUUM
Alfred L. Kronquest and Matthew M. Sedwick, Syracuse, N. Y., assignors to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application September 19, 1942, Serial No. 458,990
13 Claims. (Cl. 226—82.4)



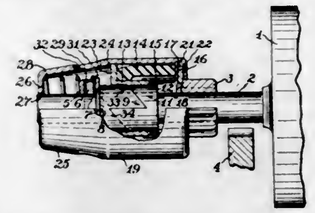
2. In a container sealing machine, a sealing chamber having an access opening; a door for said opening; seaming mechanism in said chamber including a chuck element and a container supporting element; means for drawing a vacuum in said chamber; fluid pressure operated means for moving one of said elements relatively toward the other of said elements to place a container carried on said supporting element in vacuumizing position close to but spaced from said chuck; and other fluid pressure operated means actuated by a predetermined degree of vacuum in said chamber for moving one of said elements to place said container in chucked position.

2,450,244
BEVERAGE CONTAINER AND DISPENSING DEVICE
Clarence S. Lynch, Arlington, Va.
Application September 28, 1945, Serial No. 619,209
1 Claim. (Cl. 229—7)



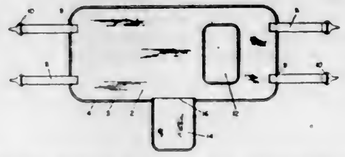
A sealed container for beverages and the like including side walls and a hingedly mounted cap

member, a drinking tube within the container of greater length than the depth of the container, brackets constructed of flexible material attached to a side wall in vertical spaced relation formed in a manner such as to frictionally engage said tube and retain it against vertical movement, the upper portion of said tube being bent into a position normal to the vertical portion of the tube



and disposed immediately beneath the surface of said cap, a bracket depending from the cap, said bracket being formed to slidably receive the bent portion of said tube whereby as the cap is moved to open position, said bent portion of the tube will be moved by the cap into a position forming a continuation of said vertical portion and providing an uninterrupted passage through said tube.

2,450,245
SANDING DEVICE FOR VEHICLES
Fred J. Mason, Syracuse, N. Y.
Application October 2, 1944, Serial No. 556,785
7 Claims. (Cl. 291—25)

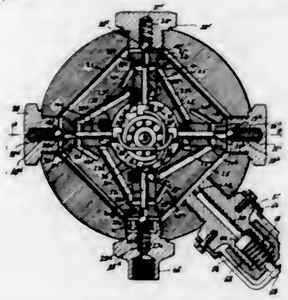


7. Road sanding equipment including a vertically disposed tubular body having a sand discharge opening at its lower end and a sand inlet port opening through its side above the discharge opening, said tubular body tapering into a valve seat adjacent its opening, a valve mounted in the tubular body to move longitudinally thereof, a fixed collar within said body to limit movement of said valve, a movable collar spaced from said fixed collar, said spacing means including resilient means connected between said collars and urging said valve upwardly away from said seat, downwardly urging means connected to said movable collar, and an arcuate flange adjacent said inlet carried by the valve to close the port when the valve is seated on the valve seat.

2,450,246
ENGINE STARTER GEARING
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application June 21, 1946, Serial No. 678,343
4 Claims. (Cl. 74—9)

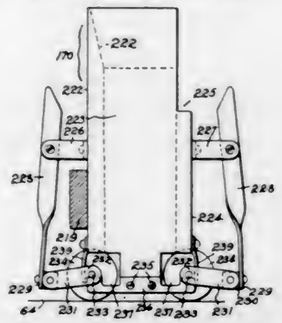
1. In an engine starter drive a power shaft, a pinion slidably journalled thereon, a barrel fixed at one end to the pinion and journalled at its other end on the shaft, a driving head in the barrel forming an abutment defining the operative position of the barrel and pinion, a driving cam member on the shaft connected to rotate with the driving head, a driven cam member slidably journalled on the shaft and having an inclined connection to the driving cam member, a compressible driving connection between the driven cam member and pinion and yielding means in the barrel urging the pinion toward idle position.

2,450,247
EMBALMER'S PROTECTOR
Edward R. Moore, Fargo, N. Dak.
Application September 20, 1946, Serial No. 698,309
5 Claims. (Cl. 27—21)



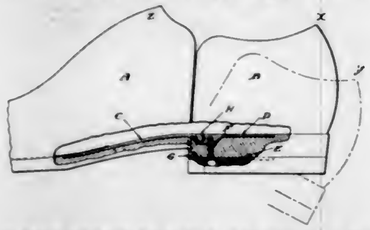
1. An embalmer's protector comprising a strip of flexible material adapted to overlie the lower regions of a subject corpse, means at opposite ends of said strip for attachment to the sides of an embalmer's table, and eccentric aperture means through said strip for providing direct access to the region of the femoral vein.

2,450,248
GREASE DISPENSING UNIT
John D. Morgan, South Orange, and Percy B. Levitt, Millburn, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
Application October 7, 1944, Serial No. 557,664
11 Claims. (Cl. 222—232)



4. A pump for grease and other viscous fluids comprising a cylinder block having a centrally located reservoir for grease or the like; a plurality of oppositely disposed cylinders extending radially from said reservoir, each cylinder having a chamber at its inner end which opens into said reservoir, a bore of smaller diameter extending beyond said chamber, an inlet port to said bore, and a discharge port constituted by the outer end of said bore; a feed passage between the chamber of each cylinder and the inlet port to the bore of the next

adjacent cylinder; a discharge passage connecting all of said discharge ports; a discharge valve seated in each discharge port and controlling the flow of grease therefrom to said discharge passage; a piston disposed for reciprocation in the bore of each said cylinders; each said piston having an enlarged head at its inner end which is adapted during a part of its stroke to project into said reservoir and during a further part thereof



to force grease into the chamber of its cylinder and through said feed passage into the bore of the next adjacent cylinder; an eccentric mounted for rotation in said reservoir said eccentric serving to drive said pistons outwardly and also to churn grease in said reservoir; and links connecting the pistons in oppositely disposed cylinders for holding the heads of such pistons in cooperation to said eccentric.

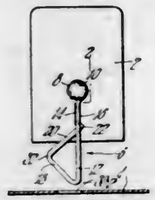
2,450,249
AUTOMATIC PIN SETTING MACHINE
John F. Murphy, Middleboro, Mass., assignor to Murphy Automatic Pinsetter Co., Inc., Cambridge, Mass., a corporation of Massachusetts
Application April 13, 1943, Serial No. 482,852
8 Claims. (Cl. 273—43)

1. A pin setter comprising a vertically reciprocable frame having pin-receiving boxes to receive the pins in substantially vertical position, pin-supporting and releasing mechanism comprising opposed pin-engaging elements at the bottom of each box consisting of a pair of horizontal spools mounted to permit vertical and lateral displacement, means for latching them together to grip the lower tapered end of a pin, the spools on contact with the alley floor being released from said latch and permitted to roll apart along the floor to release the pin between them, and means cooperating with said mechanism on its return to raised position for returning the parts to latched position.

2,450,250
HINGED HEEL SHOE
John R. Napton, Marshall, Mo.
Application March 14, 1945, Serial No. 582,610
5 Claims. (Cl. 36—2.5)

1. A shoe having an insole, an outsole, a leather heel lift, and a rubber tread lift, said shoe being divided into front section and rear section, joined together by a hinge, the front leaf of said hinge being positioned below the insole and flush with the inner face of said outsole, the rear leaf of said hinge being positioned between the leather heel lift and the rubber tread lift, said front leaf of said hinge having a depending portion, and a pivot pin connecting said rear leaf of the hinge to said depending portion.

2,450,251
COLLECTOR FOR TEXTILE DRAFTING MECHANISMS
Joseph Noguera, Prestwich, Manchester, England, assignor to Casablancas High Draft Company Limited, Salford, Manchester, England, a British company
Application April 9, 1946, Serial No. 660,711
In Great Britain April 13, 1945
2 Claims. (Cl. 19—157)



1. A collector for use in drafting mechanism for textile fibres comprising a substantially triangular base prismatic-shaped body formed with a funnel-shaped trough having an inlet in one face of said body and an outlet adjacent the line of convergence of the other two faces of said body, and rib-like projections on each end of at least one of said convergent faces, said projections being shaped to lie on the surface of a draft roller and to provide a recess therebetween which extends over substantially the width of the face on which said projections are formed, at the inlet side of said collector body, and merges into said face towards the outlet side of said collector body.

2,450,252
SECURING DEVICE
Herbert F. Oliver, West Springfield, Mass., assignor to The F. W. Sickles Company, Chicopee, Mass., a corporation of Massachusetts
Application December 4, 1944, Serial No. 566,567
4 Claims. (Cl. 248—361)

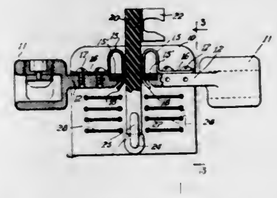
1. A device of the class described for securing

objects together comprising, a clip formed from a single length of yieldable wire to have, a portion at its upper end for securing to an object, a body portion extending therefrom, a cam portion extending upwardly in a diverging relation from the lower end of said body portion at one side thereof, an end portion extending in a diverging relation from the upper end of said cam portion

having an endmost portion disposed rearwardly of said body portion and provided with an extremity extending outwardly at an opposite side of the body portion, and across said body portion and then inwardly, said outwardly and inwardly extending portions adapted to engage said body portions to limit movements of the cam and end portions relative to the body.

2,450,253
FISHING LURE
Edwin H. Parnell, Sr., Greenville, S. C.
Application March 21, 1945, Serial No. 583,894
7 Claims. (Cl. 43—42)

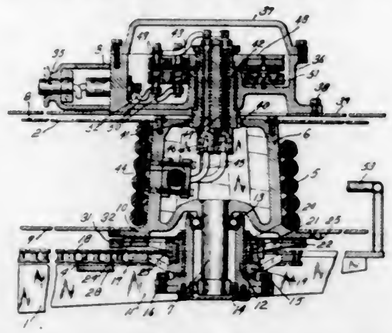
1. A fishing lure comprising a body portion having a main opening, a transverse shaft, means for supporting the transverse shaft and attached to the body portion and projecting below the body portion, a turbine rotatably mounted upon the transverse shaft and including blades which are longitudinally curved in a forward direction, the upper portion of the turbine extending into the main opening, the turbine and attaching means exerting a downward pull upon the body portion for maintaining the same upright, a forwardly inclined depending resilient stabilizing vane arranged at the rear of the turbine and attached to the body portion, a hook attached to the body portion, and line attaching means secured to the body portion near its forward end.



2,450,254
LITHIUM BASE GREASE AND METHOD OF PREPARING THE SAME
Oney P. Puryear, Fishkill, and Harry V. Ashburn, Glenham, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 10, 1944, Serial No. 548,940
2 Claims. (Cl. 252—41)

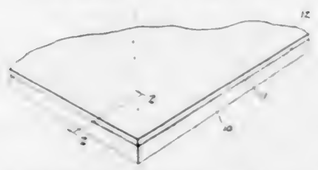
1. A method of preparing a low temperature gel-type lithium base grease containing a lithium soap of a soap-forming hydroxy fatty acid as the essential soap constituent thereof, said method enabling the use of temperatures attainable in a steam-jacketed kettle without fire hazard, which comprises saponifying with a basic lithium compound at a temperature within the range of about 170–200° F. of a soap-forming hydroxy fatty acid glyceride in the presence of a small proportion of the oleaginous vehicle included in the grease, then raising the temperature of the saponified product to about 270–330° F. to dehydrate the product and render the same translucent, thereafter reducing the temperature and adding the balance and large proportion of the oleaginous vehicle as the product cools and the desired consistency is attained, and finally drawing the resultant gel-type grease as a final product.

2,450,255
METHOD OF PREPARING LITHIUM BASE GREASES
Oney P. Puryear, Fishkill, and Harry V. Ashburn, Glenham, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application April 17, 1945, Serial No. 588,890
2 Claims. (Cl. 252—41)



1. A method of preparing a low temperature gel-type lithium base grease containing a lithium soap of a soap-forming hydroxy fatty acid as the essential soap constituent thereof, said method enabling the use of temperatures attainable in a steam-jacketed kettle without fire hazard, which comprises saponifying with a basic lithium compound at a temperature within the range of about 170°–200° F. of a soap-forming hydroxy fatty acid in the presence of a small proportion of the oleaginous vehicle included in the grease, then raising the temperature of the saponified product to about 270–300° F. to dehydrate the product and render the same translucent, thereafter reducing the heat and adding the balance and large proportion of the oleaginous vehicle as the product cools and the desired consistency is attained, and finally drawing the resultant gel-type grease as a final product.

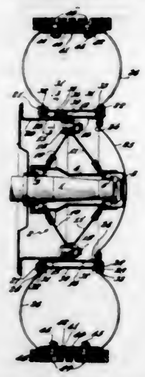
2,450,256
ELECTRIC SWITCH
Raymond N. Rowe, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application July 31, 1945, Serial No. 608,074
14 Claims. (Cl. 200—151)



1. In an electric switch, a pair of resilient spaced contacts, an insulating carrier slidable between said contacts and having two contact rollers arranged on independent axes extending at an obtuse inclined angle with respect to each other.

2,450,257
REEL MECHANISM
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application April 20, 1944, Serial No. 531,912
7 Claims. (Cl. 191—12.2)

1. In a cable reel mechanism, a cable reel, a support on which said cable reel is journaled, a power conductor cable leading from said reel, electrical contact apparatus completely enclosed in a housing attached to said support and including relatively rotatable contacts between said reel and said second mentioned power conductor cable, and releasable connections between said reel and said contact apparatus whereby said apparatus while enclosed in its housing may be removed without disturbing said support and the mounting of said reel on its journal.

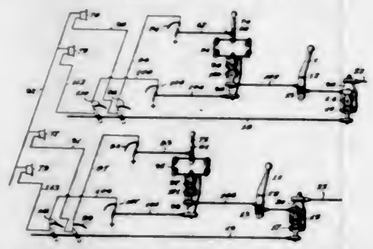


2,450,258
PLASTIC COMPOSITION AND WALLBOARD MADE THEREFROM
Max Skolnik, Chicago, Ill., assignor to Fibro-Mold Specialties, Inc., Chicago, Ill., a corporation of Illinois
Application December 22, 1945, Serial No. 636,674
8 Claims. (Cl. 106—107)

1. A moldable self-hardening plastic composition comprising rye flour mixed with one to three times its weight of powdered magnesite and with a sufficient amount of a concentrated magnesium chloride solution to form a dough-like mass.

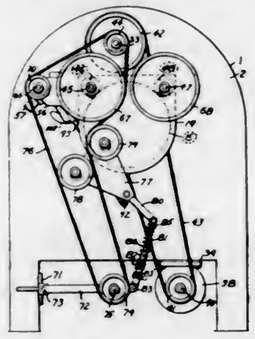
2,450,259
AIRCRAFT WHEEL AND TIRE
Arthur M. Stanley, Lynn, Mass.
Application November 11, 1944, Serial No. 563,001
5 Claims. (Cl. 152—84)

5. A wheel comprising an annular rim having flanges along its edges to provide inner and outer circumferential recesses, a plurality of radially extending circumferentially spaced approximately U-shaped resilient spring wire members mounted on the rim so as collectively to define a toroidal shaped tire, each spring wire member having its ends anchored within said recesses, and a spreader ring circumposed about said rim and having



along its edges spacer lugs projecting between the ends of the loops to lock them in said recesses and hold their ends in properly spaced position.

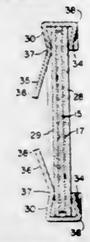
2,450,260
TREATMENT OF FLOUR FOR CONTROLLING ITS STRENGTH
Herbert Horace Ward, Grange-over-Sands, England
No Drawing. Application April 6, 1943, Serial No. 482,011. In Great Britain May 13, 1942
1 Claim. (Cl. 99—91)



The subjection of flour to the action of SO_2 gas in the presence of steam, there being always a low concentration of SO_2 relative to the steam, the weight of SO_2 added to the flour varying from about 1 oz. per sack of 280 pounds for a strong flour to ¼ oz. for a weaker flour, and the weight of moisture added increasing the moisture content of the flour up to not more than about 0.5%, whereby a substantially instantaneous reaction between the SO_2 and flour is obtained and the SO_2 residual is immediately brought very low or made immeasurable.

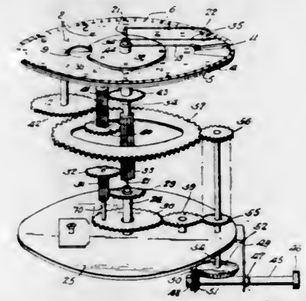
2,450,261
TRAINING EQUIPMENT FOR AVIATORS
Russell L. West, Montreal, Quebec, Canada, assignor, by mesne assignments, to Link Aviation, Inc., Binghamton, N. Y., a corporation of New York
Application May 29, 1942, Serial No. 445,060
In Canada February 11, 1942
10 Claims. (Cl. 35—12)

1. An aircraft pilot trainer comprising means for simulating a plane having a motor and variable pitch propeller combination of the type in which the motor speed tends to remain constant while variations in load are compensated for by adjustment of the pitch of the propeller blades, said means including a pair of controls simulating the pitch control arm and throttle lever of a plane, a pair of gauges in the form of a simulated tachometer and simulated manifold pressure gauge adapted to record the setting of the arm and lever, one of the gauges responding only to movement of the arm simulating control and the other gauge responding to movement of either the arm simulating control or the lever simulating control or to the combined movement of both.



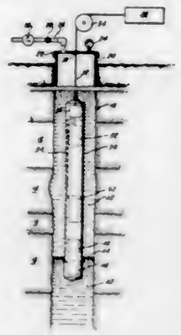
2,450,262
REVERSING DRIVE MECHANISM
Fred H. Winslow and William S. Hammond, Waco, Tex.
Application May 26, 1947, Serial No. 750,528
17 Claims. (Cl. 74—220)

1. A driving and reversing mechanism for washing machines or the like having an agitator shaft mounted on a base plate comprising, a spur gear on said shaft, a countershaft, means for rotating said countershaft constantly in one direction, a drive pulley mounted on the countershaft and rotatable therewith, a pair of short shafts, pinion gears on said short shafts adapted to engage said spur gear, main driving pulleys mounted on said short shafts in alignment with the driving pulley on the countershaft, an idler pulley pivotally mounted on said base plate in alignment with the main driving pulleys and the driving pulley on the countershaft, and a belt for said driving and idler pulleys, said belt being adapted to alternately contact said main driving pulleys.



2,450,263
ELECTRIC TEMPERATURE DEVICE
Frederic E. Wise, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application June 28, 1944, Serial No. 542,506
8 Claims. (Cl. 201—63)

1. A resistance thermometer comprising in combination, an elongated flat mica strip having serrated edges, a relatively fine resistance wire wound about said strip in said serrations, a protecting strip of mica on each flat of said wound strip and of a width greater than the distance between the roots of the opposed serrations, a metallic enclosing framework for the three mica strips covering and overlapping the longitudinal edges thereof and providing at least one longitudinally extending outwardly turned portion which when depressed relative to the remainder of the framework operates to compress the stack of mica strips throughout a major portion of their length, and a metallic protecting casing surrounding the assembly and whose interior conforms generally to the shape of the assembly, the said framework engaging the walls of said cas-

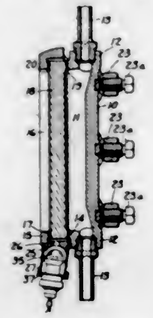


ing so that the outwardly turned portion of the framework is held depressed toward the mica strips through contact with the inner wall of said casing providing a clamping of the strips and preventing vibration through metal to metal contact with the casing.

2,450,264
CLOCK
Albert N. Woodruff, Washington, D. C.
Application October 23, 1946, Serial No. 705,136
2 Claims. (Cl. 58—43)

1. An attachment for a clock mechanism having a central driven shaft, a second hand mounted on said shaft, inner and outer sleeves arranged on the upper end of said shaft, minute and hour hands mounted on said sleeves, means for driving said shaft and sleeves, a dial having two sets of numerals thereon for indicating time on a twelve and twenty-four hour basis, an indicator disc associated with said dial whereby said hour hand will denote ante meridian and post meridian periods of time, inner and outer sleeves arranged on the lower end of said shaft, means for rotating said hands and disc, said means including a gear carried by said lower outer sleeve, a second gear carried by said lower inner sleeve, a first gear set adapted to transmit driving motion of said first gear to said second gear, a second gear set comprising a large gear and a small gear, said large gear meshing with and being rotated by said second gear, and said small gear meshing with and being adapted to rotate a third and a fourth gear, said fourth gear being carried by one of said upper sleeves and adapted to move said hour hand, the ratio of said gears being such that for every rotation of said lower outer sleeve and said first gear said second gear will make twelve revolutions and said third and fourth gears will respectively make one half and one revolutions.

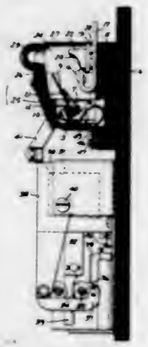
2,450,265
METHOD OF LOGGING BOREHOLES
Alexander Wolf, Houston, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 4, 1944, Serial No. 529,454
15 Claims. (Cl. 250—83)



8. A method of determining the nature of substrata traversed by a bore hole containing connate liquid which comprises placing a liquid lighter than and immiscible in said connate liquid and containing a radioactive substance, in said hole, gradually increasing the pressure in the hole so as to force a portion of the radioactive liquid into the surrounding substrata to increase the radioactivity of said substrata, the interface between the connate liquid and the radioactive liquid being forced to descend with the increasing pressure, measuring the increased radioactivity of the substrata at any point a predetermined time interval after that point has been passed by the descending interface, continuously measuring the size of the hole at a point just above the descending interface, and subsequently measuring the total increase in said radioactivity after further increase has ceased.

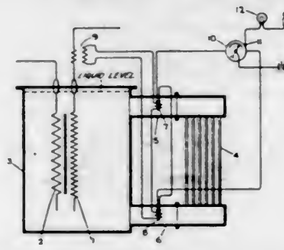
2,450,266
METHOD OF PRODUCING LITHIUM HYDRIDE AND HYDRIDES OF OTHER ALKALI METALS
Peter P. Alexander, Beverly, Mass., assignor to Metal Hydrides Incorporated, Beverly, Mass., a corporation of Massachusetts
No Drawing. Application May 28, 1947, Serial No. 751,130
10 Claims. (Cl. 23—204)

1. The mehtod of producing hydrides of alkali metals which comprises heating the anhydrous hydroxide of an alkali metal with a reducing metal in a reaction zone in the absence of air to a temperature below the dissociation temperature of the alkali metal hydroxide about but above 300° C.



2,450,267
WATER GAUGE
Charles M. Angel and Robert A. Culbertson, Huntington, W. Va., assignors to Nathan Manufacturing Company, New York, N. Y., a corporation of New York
Application October 17, 1946, Serial No. 703,922
1 Claim. (Cl. 73—293)

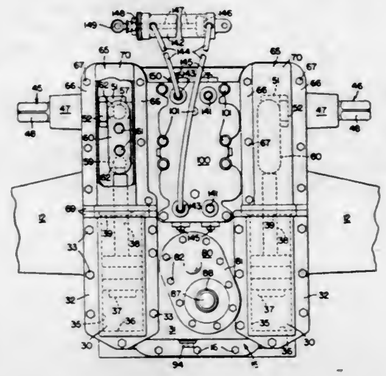
In a gauge having a casing with an elongated sight opening, a frame with an elongated sight opening, an elongated glass between said casing and frame having prismatic corrugations facing the sight opening of the casing, and means to press said casing, frame and glass together; a lamp socket at one end of said frame and being an external extension thereof disposed at a slight angle with reference to the longitudinal axis of



the frame, the socket having vent openings, and an electric lamp bulb within the socket adapted to project light through an opening in said frame and through the glass against the meniscus of a liquid in the gauge, whereby the meniscus will be visible in form of a brightly illuminated undulating line.

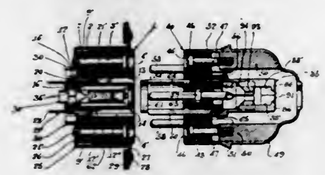
2,450,268
CIRCUIT BREAKER
Carl E. Bazley, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 30, 1945, Serial No. 613,462
1 Claim. (Cl. 200—144)

A circuit breaker comprising a supporting member made of electrically insulating material, a pair of fixed contact members electrically connected together and mounted upon said supporting member in a spaced relation, a pair of movable contact members electrically connected together and pivotally mounted in spaced relation for cooperation with said fixed contact members respectively, said movable contact members being supported upon resilient cantilever spring fingers and said fixed and movable contact members having engaging surfaces curved to provide rolling engagement and reverse rolling disengagement of said fixed and movable contact members and to effect final disengagement of said contact members always at a predetermined extremity thereof, a partition wall of electrically insulating material positioned between the cooperating pairs of fixed and movable contact members, a pair of arc deflecting members of electrically insulating material supported on opposite sides of said partition wall and each having a concave arcuate surface extending from said extremity of the associated fixed contact member away from said fixed contact member and in the direction of movement of said movable contact members, and a cover made of electrically insulating material mounted upon said supporting member and enclosing said contact members and said partition wall thereby to form separate arc extinguishing enclosures for said pairs of cooperating contact members.



2,450,269
TEMPERATURE MEASURING SYSTEM
Armand A. Chabrol, Seine, France, assignor to General Electric Company, a corporation of New York
Application September 20, 1946, Serial No. 698,358
In France July 16, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires July 16, 1965
1 Claim. (Cl. 73—350)

In combination, a transformer tank, a transformer winding in said tank, a liquid in said tank surrounding said winding, a radiator, top and bottom passageways for said liquid between said tank and radiator, thermoelectric elements located respectively in said passageways, means for heating said elements in proportion to current carried by said winding, an electroresponsive device, and means for connecting said electroresponsive device in series with both of said thermoelectric elements.



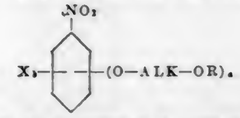
2,450,270
HYDRAULIC MECHANISM, ESPECIALLY PLURAL CYLINDER SYSTEM AND CONTROL THEREFOR
Frank T. Court, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application May 24, 1945, Serial No. 595,631
17 Claims. (Cl. 60—97)

8. Power lift mechanism comprising a casing having a cylindrical bore provided with inlet and outlet ports, there being chambers provided in either end of said casing, respectively, a piston type valve member shiftable axially within said bore to direct hydraulic fluid between said ports, selectively, poppet type check valves disposed adjacent opposite ends of said bore, respectively, and having stems engageable by said valve member for connecting said valve bore in communication with said chambers, respectively, each of said chambers having a pair of ducts connected therewith, and a 3-way valve disposed in each of said chambers and shiftable to connect either of said ducts in communication with the associated chamber and to close the other of said ducts,

selectively, and a pair of hydraulic motors connected with said pair of ducts, respectively.

2,450,271
ELECTRICAL CONNECTOR
Charles W. Dann, Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application March 7, 1945, Serial No. 581,520
4 Claims. (Cl. 173—328)

1. In an electrical connecting device for a multi-wire cable having a single wire thereof provided with metallic shielding: the combination of a socket-type connector comprising contact members for said shielding and cable wires respectively, an insulating housing carrying said contact members and exposing the same at an end of the housing, a first shield member for a single one of said contact members and electrically connected to another of said contact members, said housing having insulating means positioned about said single contact member and extending beyond the end thereof, said insulating means being arranged to provide a locating opening in said housing at said single contact member; and a plug-type connector adapted for coupling to said socket-type connector and comprising an insulating body, connector pins carried by said body and projecting from an end thereof for connection with said contact members respectively, a second shield member for the connector pin corresponding to said single contact member and projecting from said insulating body, said second shield member being engageable with said locating opening in only one angular relation of said connectors to each other and being electrically connected to the connector pin corresponding to said other contact member to cause said shield members to be positively electrically connected together when said connectors are in coupled relation to each other.



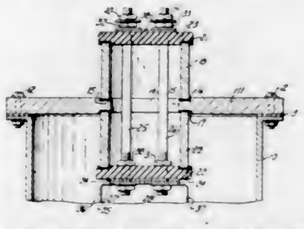
2,450,272

PLASTICIZABLE ORGANIC COMPOUNDS PLASTICIZED WITH AN ALKOXYALKYL ETHER OF A HALONITROPHENOL

George L. Doelling, St. Louis, and Kenneth H. Adams, Fenton, Mo., assignors to Mississippi Valley Research Laboratories, Inc., St. Louis, Mo., a corporation of Missouri

No Drawing. Application March 23, 1946, Serial No. 656,785
5 Claims. (Cl. 106—188)

1. A plasticized composition comprising a plasticizable organic substance and as a plasticizer therefor, a compound having the formula:



in which ALK represents a divalent aliphatic hydrocarbon radical containing not more than six carbon atoms, R represents an aliphatic hydrocarbon radical containing not more than ten carbon atoms, X represents a halogen, *a* is not more than two, *b* is an integer, and the sum of *a* plus *b* is less than six.

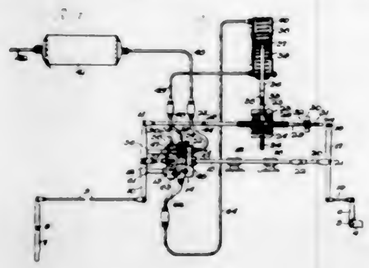
2,450,273

HIGH-VOLTAGE TERMINAL

William Dubilier, New Rochelle, N. Y., assignor to Cornell-Dubilier Electric Corporation, South Plainfield, N. J., a corporation of Delaware

Application April 13, 1946, Serial No. 662,036
4 Claims. (Cl. 174—153)

1. A terminal structure for a high frequency, high voltage apparatus enclosed in a metallic casing having an insulating wall provided with an opening, comprising a pair of cup-shaped insulating members each having a bottom portion and a cylindrical portion separate therefrom and engaging a groove of said bottom portion, said members being arranged on each side of said wall with the open ends of said cylindrical portions abutting against the opposite edge zones of said wall around said opening, a plurality of conductors passing through said opening and said bottom portions, said conductors being spaced from each other and from the edge of said opening, and means for mechanically securing said conductors to said bottom portions to hold the complete assembly together.



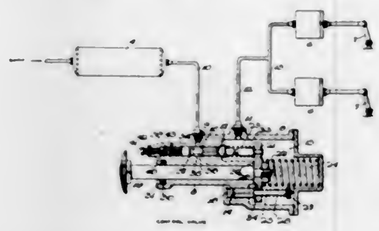
2,450,274

PRESSURE FLUID FOLLOW-UP SERVOMOTOR

Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware

Application May 12, 1944, Serial No. 535,301
17 Claims. (Cl. 121—41)

1. Control mechanism for a device to be actuated including a lever having a direct operating connection with said device, a fulcrum for said lever spaced from said connection, means for normally maintaining said fulcrum in a predetermined position regardless of the force exerted



thereon by said lever, and means separate from the first means and including a power actuator controlled by movement of said lever about said fulcrum for moving said fulcrum and lever to effect power operation of said device.

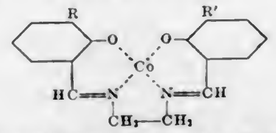
2,450,275

CONTROL VALVE MECHANISM

Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware

Application May 18, 1945, Serial No. 594,514
16 Claims. (Cl. 303—54)

1. Self-lapping fluid pressure control valve mechanism including a casing having an inlet chamber, an outlet chamber, an exhaust port in the outlet chamber, an inlet valve for preventing communication between the inlet and outlet chambers and adapted to be moved to open position by the pressure in the inlet chamber, an exhaust valve adapted to close the exhaust port and adapted to be moved to open position by the pressure in the outlet chamber, a valve operating element having a release position and movable to other positions, resilient means for normally maintaining said element in release position, inlet and exhaust valve springs in the outlet chamber adapted to respectively bias the inlet and exhaust valves toward closed position, and a beam having its central portion connected to said element and having oppositely extending arms arranged in a common plane and bearing against said last named springs, whereby on movement of the element from release position the biasing action of the inlet valve spring is decreased in proportion to the degree of movement of the element and the biasing action of the exhaust valve spring is proportionately increased.



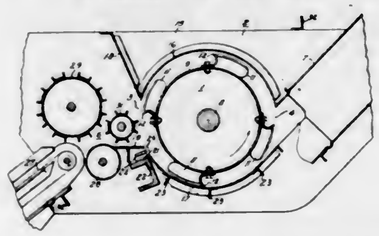
2,450,276

PROCESS FOR PRODUCTION OF OXYGEN

Benjamin B. Fogler and Leroy F. Marek, Lexington, Mass., assignors to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts

No Drawing. Application July 7, 1944, Serial No. 543,970
3 Claims. (Cl. 23—221)

1. The process of separating oxygen from air by means of a chelate compound having the formula



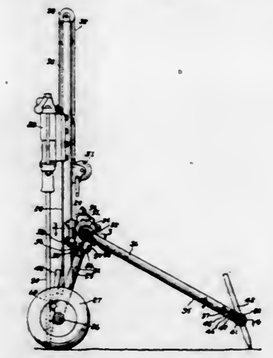
wherein R and R' are the same and are selected from the group consisting of —H, —OCH_3, —OC_2H_5, and —F which comprises providing a mass of said chelate compound, introducing air into said mass, withdrawing heat from said mass to cause it to absorb oxygen from the air, and discontinuing absorption when from 50% to 65% of the capacity of the chelate compound to absorb oxygen has been satisfied, heating said mass to cause it to release oxygen, and discontinuing desorption when the oxygen content of the compound is from 10% to 20% of saturation capacity.

2,450,277

FORAGE CUTTING APPARATUS, INCLUDING A ROTOR HAVING POCKETED BLADES

Conrad E. Frudden, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application October 1, 1945, Serial No. 619,633
9 Claims. (Cl. 146—120)



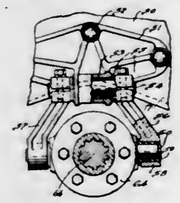
1. A forage severing and conveying apparatus comprising a shaft, a plurality of peripherally flanged disks mounted on said shaft in concentric relation thereto, one or more trough-shaped blades secured to peripheral flange portions of said disks and extending generally longitudinally of the shaft axis with the concave material confining surfaces of said blades facing in the general direction of blade travel, said blades each having its outer edge portion externally beveled and sharpened to present a knife-like cutting edge which also faces in the general direction of blade travel, a casing structure surrounding the outer edges of said blades and having therein a pair of circumferentially spaced material receiving and discharging openings, and a shear bar mounted for severing coaction with the outer edge portions of said blades, said casing structure having an arcuate section extending from said shear bar to the adjacent side of said material discharging opening and contiguously coacting with the outer edges of said blades to prevent severed material from passing between said arcuate casing section and the opposed cutting edges of said blades thereby maintaining much of the severed material within the troughs of said blades as it is conveyed by said blades to said discharge opening.

2,450,278

MOUNTING FOR ROCK DRILLS

George H. Fuehrer, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey

Application December 28, 1944, Serial No. 570,094
1 Claim. (Cl. 255—51)



In a mounting for rock drills, a horizontal bar to support a rock drilling mechanism, legs integral with the bar, wheels on the legs, a brace for the bar having a pair of arms, coniform surfaces on the arms and on the ends of the bar cooperating with each other to form pivotal connections between the bar and the brace to permit of angular adjustment of the brace relatively to the bar, clamp means on the brace adjustable with respect to the brace and to the legs, a projection on the clamp means to extend into the path of movement of and engage one of the legs to limit the degree of angular movement of the brace with respect to the bar, a bolt extending through the bar and through the ends of the arms, and a nut on an end of the bolt to engage one of the arms for forcing the coniform surfaces of the arms and the bar into braking and locking engagement with each other.

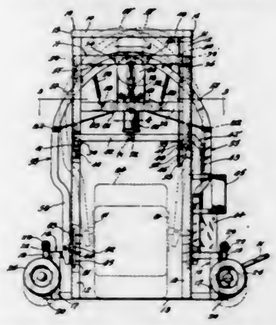
2,450,279

RESILIENT SHAFT HANGER

Frederick M. Guy, Detroit, Mich., assignor, by mesne assignments, to U. S. Universal Joints Company, a corporation of Michigan

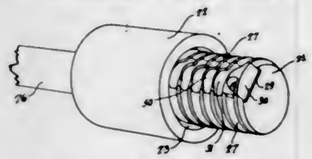
Application March 12, 1943, Serial No. 478,899
4 Claims. (Cl. 308—28)

1. A resilient shaft hanger comprising a bracket secured to a supporting member, a pre-loaded rubber bushing carried by said bracket and en-



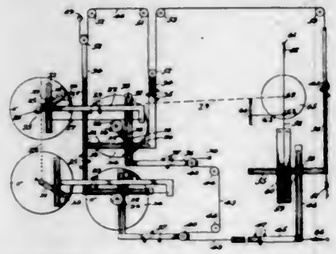
gaging a stud having end portions extending outwardly from the ends of said bushing, a depending arm detachably secured to each end of said stud, a housing, a shaft journaling bearing carried in said housing, a pair of outwardly extending studs secured to said housing each of said studs being journalled in a pre-loaded rubber bushing carried in the depending end of each of said arms.

2,450,280
METHOD OF MAKING METAL SPONGES
Albert J. Homon, Chicopee, Mass., assignor to Springfield Wire & Tinsel Co., West Springfield, Mass., a corporation of Massachusetts
Application January 8, 1945, Serial No. 571,901
4 Claims. (Cl. 140—71)



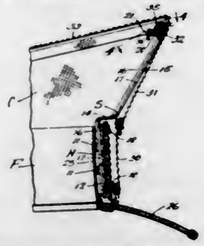
1. A method of making a metal sponge which comprises forming a continuous right handed helix and a continuous left handed helix, winding said strands under tension upon a rotating support, continuously traversing said strands back and forth along the support so that the strands continuously cross over those previously wound, and releasing the mass from the support.

2,450,281
POWER LIFT MATERIAL WEIGHING MACHINE
Perry D. Hudson, Corpus Christi, Tex.
Application March 13, 1946, Serial No. 654,073
12 Claims. (Cl. 265—52)



9. Weighing mechanism of the character stated, comprising a structure formed to provide a vertical guide, a vertically movable structure disposed within the guide, weight computing mechanism including a scale beam supported upon the guide structure for vertical oscillation, said beam being disposed beneath the vertically movable structure, a pair of relatively long arms extending vertically at opposite sides of the structures, each of said arms curving upwardly and inwardly at its upper end, a pivotal coupling between the upper end of each arm and the vertically movable structure by which the lower ends of the arms may swing inwardly and outwardly, means normally urging the arms to swing outwardly at their lower ends, a power unit supported upon said scale beam and including a vertically movable element, guide elements carried by the vertically movable structure at opposite sides of the power unit, and a flexible connection between the arms and the vertically movable element of the power unit, the flexible connection passing beneath the guide elements whereby upon vertical movement of the power unit element the arms will be swung together and the arms and vertically movable structure will be moved upwardly.

2,450,282
ANTIFRICTION SCREW AND NUT ACTUATOR
George W. Jackson, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 18, 1946, Serial No. 684,588
13 Claims. (Cl. 74—459)

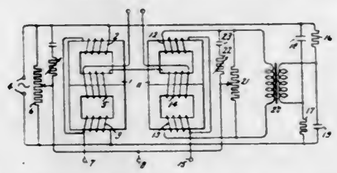


1. A load moving device comprising in combination two members rotatable and longitudinally movable relatively to each other, one member surrounding the other; means for rotating one of said members; cooperating formations on both members for enabling rotation of the rotatable member to cause the other member to move longitudinally relatively to the rotated member, said formations comprising an endless, part helical, part diverging single turn furrow on one of said members and a helical, multi-turn groove on the other of said members; a plurality of bearing elements in the channel formed by the single turn groove and coinciding portion of the multi-turn groove, providing the only means mechanically connecting the two members; and means provided at the sides of the single turn furrow, said means being shaped to enter and provide a barrier movable through the multi-turn groove, whereby the bearing elements are shunted from the helical channel and directed through the diverging portion of the single turn furrow and prevented from wedging into portions of the multi-turn groove.

2,450,283
ANTENNA PATTERN TRACER
Martin L. Jones, Baltimore, Md.
Application July 21, 1945, Serial No. 606,409
4 Claims. (Cl. 235—61)

1. An apparatus for determining the pattern or field intensity of an array of a plurality of antennas, in which one of said antennas is a reference antenna, said apparatus comprising a pair of rotatable arms for each of the other antennas, the first of said arms carrying a slider movable longitudinally thereof and adjustable to a position corresponding to degrees of spacing of its antenna from the reference antenna, the second of said arms carrying an element movable therealong for an adjustment to a position corresponding to the current of the corresponding antenna, means interposed between said first and second arms for transmitting the rotation of the first to the second in a cosine ratio, a pair of intersecting bars associated with each of said second arms and movable with the said element when the arm is rotated, whereby the movement of one of said bars constitutes the horizontal component and the the other the vertical component of the movement of said second arm, a pair of intersecting summation bars, means mechanically connecting said summation bars with the first-named bars, whereby one of said summation bars moves a distance equal to the algebraic sum of the horizontal components of the movement of all said second arms and the other of said summation bars moves a distance equal to the algebraic sum of their vertical components, a slider carried by said summation bars at the point of intersection, and means for rotating said first arms in unison, the distance between the last-named slider and a fixed point thereby being made to correspond to the variations of the field intensity of the antenna array.

2,450,284
UNIFORM CAP
Benjamin Lev, Chicago, Ill.
Application November 29, 1946, Serial No. 712,824
4 Claims. (Cl. 2—195)

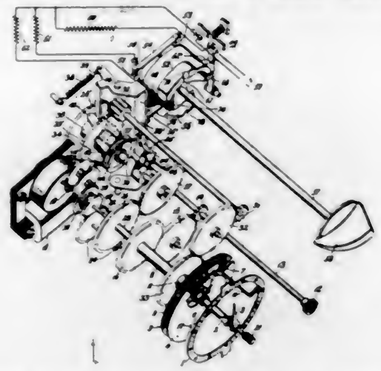


1. In a uniform cap, the combination of a frame, a cover fitted to the frame and freely removable therefrom, the cover comprising a tip and side and a welt at the inside juncture thereof, a fitting fixedly secured to the welt at the front, and a front support extending upwardly from the frame in detachable connection therewith and in removable supporting connection with the welt fitting whereby to support the cover at that point.

2,450,285
GLIDER SLED
Oscar J. Lidberg, Hibbing, Minn.
Application October 25, 1946, Serial No. 705,655
1 Claim. (Cl. 280—18)

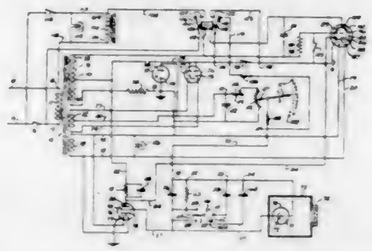
A sled comprising a plurality of elongated slats, each of tapered construction from its medial portion outward, said slats being disposed in edge to edge relation, cleats securing the ends of the slats in said edge to edge relation, said slats having elongated medial portions of their abutting edges beveled to provide grooves at the bottom medial portion of said sled, while the end portions of the bottom side are smooth.

2,450,286
SECOND HARMONIC NONLINEAR AMPLIFIER
Orrin W. Livingston, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 7, 1948, Serial No. 25,563
7 Claims. (Cl. 172—281)



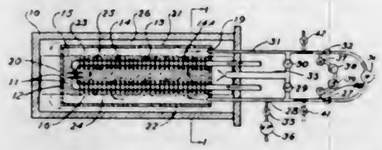
1. In a second harmonic non-linear amplifier, the combination of alternating current supply connections, a saturable magnetic core, a reactor winding and at least one signal winding upon said core, said reactor winding comprising two series-connected similar sections and being connected directly to the alternating current supply connections, said signal winding being so disposed relative to the reactor winding that magnetic flux produced by direct current in the signal winding flows in opposite directions through respective sections of the reactor winding, an impedance element connected in parallel with said reactor winding, and output connections respectively connected to a point in the circuit between the two sections of the reactor winding and to a tap substantially at the center of said impedance element, so that substantially no fundamental frequency component of voltage appears between said output connections.

2,450,287
RANGE TIMER
John R. Macintyre, South Peabody, Mass., assignor to General Electric Company, a corporation of New York
Application March 15, 1946, Serial No. 654,567
9 Claims. (Cl. 161—1)



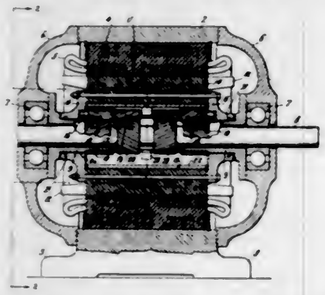
1. A time switch comprising a clock, an automatic switch operating release mechanism of the cockable type, including a pivoted cam follower lever adapted to swing in a fixed plane about its pivot, spring means for driving said lever about its pivot in one direction, clock controlled means for delaying the driving action of said spring on said lever and releasing such action in two distinct steps whereby the lever is driven by said spring in two distinct steps, said clock controlled releasing means being adjustable with respect to the times of said releasing operations, a switch adapted to be operated between two positions in response to said two releasing operations, a master cam interposed between said lever and said switch, said master cam being rotatively mounted in a fixed axial position about a given axis and having a cam surface cooperating with said lever and a cam surface cooperating with said switch such that starting with the cam in a given rotary position the clock controlled step

operations of said lever turn the cam in a given direction in corresponding distinct steps and the switch is operated to and from a given position respectively by such rotative steps, means for manually rotating said cam in either direction



to said given position from any other position, said manual operation causing the cam to swing said lever in the direction to tension said spring means and to perform a cocking action on said releasing mechanism if not in a cocked condition.

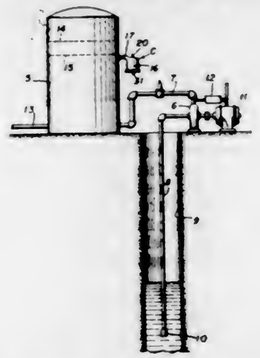
2,450,288
PHOTOELECTRIC EXPOSURE METER
George Maisch, Sea Cliff, N. Y., assignor to Powers Photo Engraving Company, Glen Cove, N. Y., a corporation of New York
Application April 19, 1947, Serial No. 742,543
19 Claims. (Cl. 250—41.5)



1. In a system of the character described, a photoelectric cell having cathode and anode and exposed to light during an operating cycle, a condenser connected across said cell, a vacuum tube having at least cathode, control grid and anode, an output circuit including a load connected to the tube cathode and anode, a connection between the grid and cell cathode, two sources of potential at least one of which is a source of constant potential, connections from the tube cathode to the negative terminal of said one constant potential source and to one terminal of the second potential source respectively, means including switching means having normal and off-normal positions for impressing selectively the potential of the remaining terminal of each potential source upon the cell anode, said switching means in the normal position providing a circuit for charging said condenser with grid current furnished by said second potential source, said switching means in the off-normal position during an operating cycle providing a circuit for clamping the cell anode potential to the positive terminal of said constant potential source while the cell discharges the condenser during the operating cycle, said clamping potential being above grid cut-off whereby said tube is cut-off during the operating cycle and cuts in to terminate the operating cycle.

2,450,289
GAS TREATING APPARATUS
Leroy F. Marek, Lexington, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
Application April 15, 1944, Serial No. 531,150
3 Claims. (Cl. 23—281)

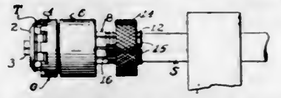
1. An apparatus for separating a gaseous component from a gaseous mixture, comprising an inner container in the shape of a rectangular parallelepiped disposed in and resting on its long edges in an outer cylindrical chamber longer than said inner container and thereby defining a space between said inner container and said outer chamber, finned heat exchange means positioned within said inner container, foraminous means within said inner container and spaced from the walls thereof between said walls and said heat exchange means, and adapted to retain about said heat exchange means an absorbing-desorbing material for said gaseous component, pipe means for supplying said gaseous mixture to the interior of said container, openings communicating between the inner container and the outer chamber, and pipe means for conducting said gaseous component from within said inner container.



2,450,290
DYNAMOELECTRIC MACHINE
Hugh S. Maxwell, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 1, 1947, Serial No. 758,447
4 Claims. (Cl. 172—36)

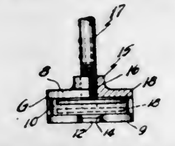
1. A dynamoelectric machine having a rotatable shaft, a stator portion including end bells having bearings adapted to receive said shaft, a rotor portion arranged to react electrodynamically with said stator portion and interposed between said stator and said shaft, said rotor portion having an inner bore substantially larger

than the diameter of said shaft, a planetary gear set including tracking and driving planet gears, bearings for said planetary gear set in said rotor portion, means including stationary annular sleeves attached to said end bells and extending axially inward therefrom and having gaskets for providing a running seal, said sleeves being provided with stationary sun gears for said tracking planet gears of said set of planetary gears, means including at least one shaft gear rotatable with said shaft and meshing with said driving planet gears of said planetary gear set to provide mechanical connection between said rotor portion and said shaft through said set of planetary gears.



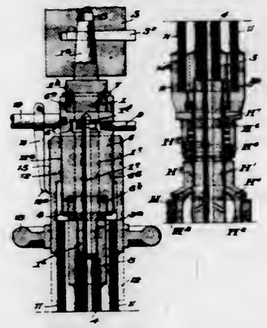
2,450,291
AIR CHARGER FOR STORAGE TANKS
Samuel M. McCarthy, Columbus, Ga.
Application May 5, 1947, Serial No. 746,145
7 Claims. (Cl. 103—6)

1. An air charger for a water system having a storage tank and a pump for supplying water from a well to the tank, comprising a chamber having a constant top communication with the tank substantially at the desired low liquid level in the tank, a fixed piston in said chamber, a reciprocable cylinder in said chamber adapted to be moved in one direction by liquid under pressure from said tank along and off of said piston when the pressure in said tank is increased above a predetermined point, means including a check valve providing for passage of a charge of outside air into said cylinder in response to suction produced by the cylinder when so moved along the piston, the cylinder moving off of said piston so that the liquid may enter the cylinder and force the charge of air from the latter into the chamber for passage into and to the top of the tank, and spring means for moving the cylinder in the opposite direction onto and along the piston when the pressure in said tank is reduced below a predetermined point, said piston including means providing for forcing the liquid from the cylinder into said chamber past the piston when the cylinder is moved in said opposite direction onto and along the piston.



2,450,292
SOLE EDGE TRIMMER
Arthur C. Nelson, Alexandria, Minn.
Application August 27, 1946, Serial No. 693,229
5 Claims. (Cl. 12—92)

1. In an edge trimmer supported by a shaft, a trimmer guard comprising a guard member for coaction with the cutters of the trimmer, a spring chamber sleeve carried by the guard member at the inner side thereof, a holding sleeve telescoping within the spring chamber sleeve, an expansible spring within the chamber sleeve interposed between and bearing against the opposed ends of the guard member and holding sleeve,



the outer portion of the holding sleeve being constructed to be contractible, and means for compressing said outer portion, the guard member, chamber sleeve, and holding sleeve surrounding the trimmer shaft, the outer portion of the holding sleeve when contracted clamping said holding sleeve to the trimmer shaft.

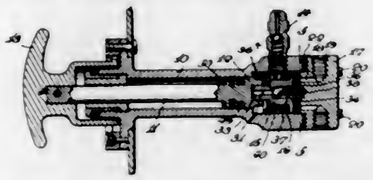
2,450,293
VALVE PULLER
Harold L. Oserowsky, Bay City, Mich.
Application June 7, 1945, Serial No. 598,036
1 Claim. (Cl. 29—283)

In a valve puller comprising spaced-apart connected disks forming a valve head accommodating chamber therebetween, a valve head opening in the outer periphery thereof, a centrally disposed threaded opening in the upper disk, a vertical stem threaded therein, and extending into said chamber, a relatively thin, intermediate disk connected to the end of the stem within said chamber, said disk being vertically adjustable as the stem is rotated to accommodate valve heads of various sizes in the chamber between the lower disk and the intermediate disk.

2,450,294
HONE ADAPTER
John J. Palotsee, Youngstown, Ohio
Application July 24, 1946, Serial No. 686,049
19 Claims. (Cl. 51—184.1)

1. In combination with a hone having a hone spindle upon which an annular series of hone stones are mounted, an adapter spindle adapted to be mounted upon a rotary driving spindle for

rotation therewith; a flexible cable having heads at both ends mounted on the adapter spindle and hone spindle respectively; said adapter spindle, cable and hone spindle having registering bores leading into the hone, the hone spindle bore having branches which discharge within the hone behind the series of stones; and means for introducing lubricant into the bore of the adapter spindle.



2,450,295

ENGINE PRIMER

Arthur L. Parker, deceased, late of Cleveland, Ohio, by Helen M. Parker, executrix, Shaker Heights, Ohio, and Joseph F. Melichar, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio

Original application November 27, 1944, Serial No. 565,240, now Patent No. 2,412,532, dated December 10, 1946. Divided and this application May 15, 1945, Serial No. 593,799

5 Claims. (Cl. 277—25)

4. A valve for engine primers or the like having a flat surface containing a plurality of outlet conduits, and a valve mechanism including a body, one end thereof having a flat head portion and the other end a non-circular relatively smaller portion, a check valve mounted within said body adapted to permit the discharge of fluid under pressure, means detachably connected to said non-circular end portion adapted to thereby rotate the said body, a disc secured to said flat head portion and engaging said flat seat surface, said disk having means for radially directing fluid discharged through the valve in said body into any one of said outlet conduits in the said flat seat surface, and yieldable means associated with said valve body adapted to maintain said disk on the valve body in engagement with the said flat seat surface during all the functions of the valve.

2,450,296

METHOD OF PRODUCING ARTICLES HAVING FISSURED CHROMIUM SURFACE ELECTRODEPOSITS

Frank Passalacqua, Detroit, Mich., now by judicial change of name Frank Passal, assignor to United Chromium, Incorporated, New York, N. Y., a corporation of Delaware

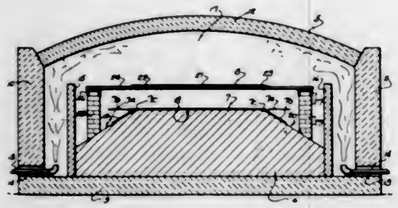
No Drawing. Application August 25, 1944, Serial No. 551,259

1 Claim. (Cl. 204—37)

In a method of producing fissured networks in the surface chromium electrodeposits, heating chromium electrodeposits which are predisposed to the formation of fissured chromium of the "mud crack" or "channel" type of a size greater than .008" average plateau diameter to temperatures and for times within the ranges

	Hours
212° F.	1¼
350° F.	2
500° F.	2

and thereafter etching the heat-treated chromium electrodeposits at the temperature of the etching bath to develop a fissure network therein, the plateau areas of which networks being reduced to ⅔ to ¼ of the size which would be obtained on etching without the previous treatment.



2,450,297

APPARATUS FOR BENDING GLASS

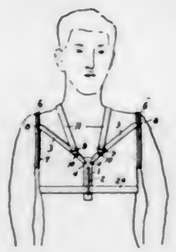
John P. Pearse, Swanton, and William P. Bamford, Maumee, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio

Application December 19, 1941, Serial No. 423,630

15 Claims. (Cl. 49—7)

13. In apparatus for bending glass sheets or plates, a shaping surface upon which a sheet is adapted to be bent, means for heating the sheet to bending temperature, and a shield for shielding selected portions of said sheet during bending arranged in spaced relationship to said shaping surface and in the path of heat from the heating means.

14. In a method of bending glass sheets or plates wherein the sheets to be treated are placed on a shaping surface and then exposed to bending heat, the step of controlling the bending of the glass sheets by shielding selected portions only of said sheets by positioning a shield at a location spaced from the shaping surface and glass but in the path of said heat to the glass to retard the heating of said selected portions during the bending operation.



2,450,298

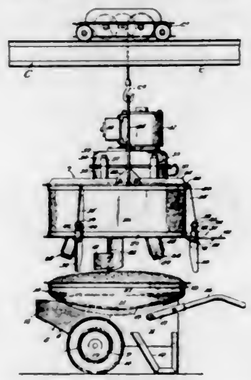
CLAVICLE SPLINT

Fred William Peterson, El Centro, Calif., and Otto S. Kirschner, Vashon, Wash.

Application August 16, 1946, Serial No. 690,854

3 Claims. (Cl. 128—87)

1. A clavicle splint comprising a front connecting plate; a right and a left rod pivoted at one end of each to said plate and diverging upwardly forming a V; right and left shoulder straps anchored, one to each said rod adjacent the pivoted ends of the same; padded arcuate bars pivoted to the other ends of said rods; adjustable straps secured to the free ends of each said padded arcuate bars; an adjustable back strap connecting the upper ends of said padded arcuate bars; a chest strap engaging said front connecting plate; a back unit having connected buckle straps provided with four buckles with two of which said chest strap connects and with the other two of which said shoulder straps respectively connect.



2,450,299

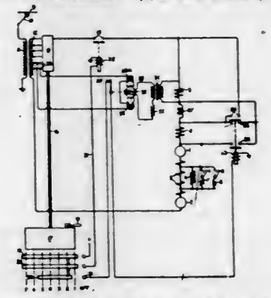
PORTABLE MOLDING SAND MULLER, INCLUDING SUSPENDABLE POWER-DRIVEN MULLER UNIT AND UNDERLYING PORTABLE BOWL RECEPTACLE

Walter F. Piper and Joseph J. Soldat, Chicago, Ill., assignors, by mesne assignments, to Pettibone Mulliken Corporation, a corporation of Delaware

Application April 24, 1944, Serial No. 532,445

13 Claims. (Cl. 241—100)

10. An apparatus adapted to mull granular material in an establishment having an overhead hoisting apparatus, and comprising a portable bowl-shaped receptacle for the material to be mulled, and a self-contained mulling unit provided with means whereby it may be attached to the hoisting apparatus in order that it may be lowered and raised by said hoisting apparatus into and out of an operative position with respect to the receptacle when the latter is positioned therebeneath, and embodying a continuous side wall shaped conformably to the side wall of the receptacle, adapted when the unit is in its operative position to rest on, and form a continuation of, the receptacle side wall, and having at its upper end a structural member extending thereacross, a rotary crosshead disposed within the second mentioned side wall, an upstanding mulling wheel connected to the crosshead so that it is vertically movable to a limited extent relatively thereto, provided with spring means for urging it downwards, having the upper portion thereof disposed within the second mentioned side wall and its lower portion disposed beneath said second mentioned side wall, and arranged so that during drive of the crosshead while the unit is in its operative position it travels in a circular course over the receptacle and effects mulling of the material by squeezing it against said receptacle, and means for driving the crosshead consisting of an electric motor and speed reducing gearing supported on said structural member.



2,450,300

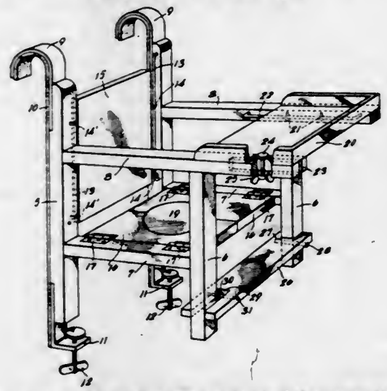
TRACTION MOTOR CONTROL SYSTEM

Franklin H. Pritchard, Erie, Pa., assignor to General Electric Company, a corporation of New York

Application March 26, 1947, Serial No. 737,367

11 Claims. (Cl. 318—244)

11. In combination, a control system for alternating current electric vehicle traction motors comprising, a pair of alternating current motors, a series field winding for each motor, a reactor, control means for supplying varying voltage to said motors, electromagnetic switching means for connecting said series field windings and said reactor in parallel in one position and effective to reconnect said series field windings in series circuit relationship and to short circuit said reactor in a second position, electromagnetic relay means responsive to the electrical conditions of one of said motors for operating said switching means upon attainment of a predetermined electrical condition in said motor, and means associated with said control means for rendering said electromagnetic relay means ineffective to operate said switching means.

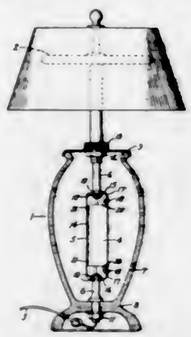


2,450,301

FOLDING BABY SEAT

Edgar James Quiggle, Shelby, Ohio

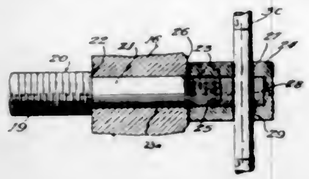
Application November 24, 1943, Serial No. 511,601



5 Claims. (Cl. 155—31)

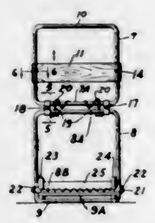
4. A portable baby seat adapted for suspension from an ordinary chair or bench; comprising pairs of front and rear uprights stiffly connected by arm rests and side rails, said rear uprights extending above the front uprights, and said side rails being located above the lower ends of said front uprights; a two section seat with a commode opening, one section having permanent top hinge connection with one of said side rails, the other section having a permanent top hinge con-

nection with the other side rail, and the adjacent edges of said seat sections having permanent bottom hinge connection permitting upward folding of the entire seat; suspension means for the baby seat, a back and forth adjustable tray normally resting on both arm rests and having slidable hinge connection at the bottom near one end with one of said arm rests, and detachable connection at its other end with the other arm rest consisting of bolt and wing nut on said tray, a vertical slot being provided in the forward end of the latter arm rest for detachable engagement by the bolt, thus permitting downward swing of the tray on said hinge connection upon releasing said detachable connection by disengagement of the bolt from the slot.



2,450,302
FLUORESCENT BALLAST BRACKET
Robert F. Rowe, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application November 25, 1947, Serial No. 788,046
1 Claim. (Cl. 240—51.12)

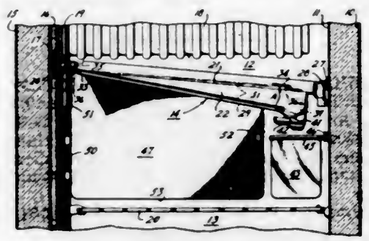
A mounting bracket, for fluorescent ballasts of the elongated rectangular cross-section type having perforated mounting feet at the same side of opposite ends, comprising a one piece sheet metal stamping having an elongated center section substantially equalling in length the length of said ballast, intermediate sections bent in the same direction at right angles to said center section, and end sections bent inwardly toward each other at right angles to said intermediate sections, the length of said intermediate sections being substantially equal to the thickness of said ballast, said end sections having mounting perforations which register with the perforations in the mounting feet of said ballast, mounting openings in said intermediate sections which are so located that a line through their center passes through the center of gravity of said ballast and bracket when their mounting perforations are in registration, and a pair of spaced indentations on said center section for providing two points of contact between said center section and the surface of said ballast.



2,450,303
CLAMPING DEVICE OF THE VISE TYPE
Anthony M. Sasgen, Chicago, Ill., assignor to Grand Specialties Company, Chicago, Ill., a corporation of Illinois
Application July 17, 1944, Serial No. 545,334
2 Claims. (Cl. 81—33)

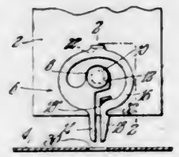
1. In a clamping device including a stationary clamping element, a movable clamping element, an operating member for moving the movable element relative to the stationary element and having a forwardly projecting stem portion of relatively smaller diameter at one end thereof to afford an integral shoulder facing forwardly at the junction of said stem and said movable element, said operating element being passed through an opening in the movable element to

have one face of such element engaged with said shoulder, a retaining member screw threaded onto said operating member stem and engaged with the opposite face of said movable element, and means extending through said retaining member and said stem for securing said retaining member to said operating member, said last named means providing a handle operable to turn said retaining member and said operating member.



2,450,304
OUTBOARD MOTOR DOLLY
William E. Shiflet, St. Clair Shores, Mich.
Application March 18, 1946, Serial No. 655,149
5 Claims. (Cl. 280—36)

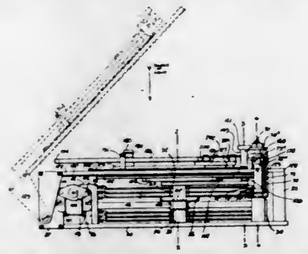
1. In a device of the character described, the combination of a pair of hinged tubular frames of substantially equal size, means to lock said frames in alignment, one of said frames having a mounting block adjustable thereon, the other of said frames having a platform secured thereto, and wheels for supporting the device, there being a comparatively large diameter cylindrical member interposed between said wheels.



2,450,305
PARTITION FOR REFRIGERATORS
Malcolm G. Shoemaker, Doylestown, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application February 5, 1948, Serial No. 6,477
9 Claims. (Cl. 62—103)

1. For refrigerators, a partition having two side-by-side sections, one section having a substantially imperforate portion and the other section having an open portion, a member mounted on the partition for movement relatively to each section and for adjustment into position to cover said open portion and in position to overlap said imperforate portion and to uncover said open portion, and sump means to one side of each of said

portions to provide for the reception and drainage of defrost water.

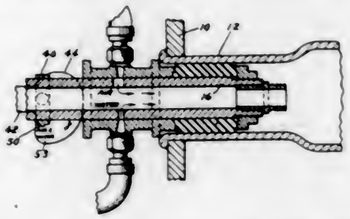


2,450,306
SECURING DEVICE
Royal F. Sickles, Springfield, Mass., assignor to The F. W. Sickles Company, Chicopee, Mass., a corporation of Massachusetts
Application December 4, 1944, Serial No. 566,424
4 Claims. (Cl. 248—361)

1. In combination, a first object and a securing device secured to said first object for releasably securing the same to a second object, said device comprising a clip formed from sheet metal and having a central hub secured to said first object, a first prong depending therefrom so as to be resiliently movable laterally but not longitudinally, a relatively yieldable ring-like arm portion extending from a side of said hub upwardly and around said hub and spaced therefrom terminating in a second prong adjacent said first prong, said second prong thereby being resiliently movable both towards and away from the first prong and also longitudinally thereof, said first object having a slot of limited length and said ring-like portion having an ear received within said slot, said slot and said ear cooperating to prevent rotation of said securing device on said first object and to limit the longitudinal motion of said second prong.

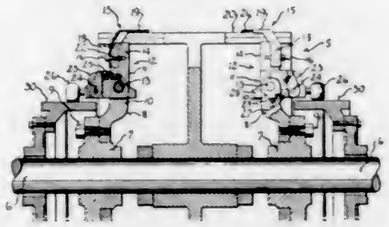
2,450,307
DEVICE TO MAKE TEST PRINTS OF PHOTOGRAPHIC COLOR PRINT MATERIAL BY THREE NONUNIFORM PART EXPOSURES OF A TEST TRIANGLE TO THREE COLORS
Alfred Simmon, Jackson Heights, and Louis L. Weisglass, New York, N. Y., assignors to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application August 15, 1946, Serial No. 690,687
13 Claims. (Cl. 95—10)

1. A device for making test prints on photographic color print material of the monopack type comprising means to subject each of a plurality of areas of triangles on a single sheet to three successive part exposures, means to change the color of the light for each part exposure, and means to distribute the light during these part exposures non-uniformly over each of said areas, comprising means to mask progressively portions of each of said triangles during each part exposure, whereby each corner of each of said triangles receives a full exposure to light of one color and the side opposite said corner receives no exposure to light of said color, intermediate points receiving exposures of all three colors, the relative exposures of each point to light of each color depending upon its relative distance from the three sides of each of said triangles, means to make the sum of all three part exposures a constant over the area of any of the triangles, and means to render said constant of a different magnitude for different triangles, said device including a supporting structure consisting of two principal parts, the first part serving as a base, and the second part hingedly attached thereto, said first principal part supporting a motor drive, a cam assembly comprising a plurality of rotatable cams driven by said motor unit, a lever assembly comprising a plurality of pivoted levers actuated by said cam assembly, and a support for said color print material including means in operative con-



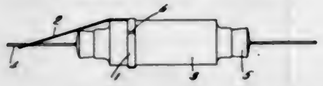
nection with said lever assembly to rotate and to index said support between exposures, said second principal part supporting an aperture plate with a triangular aperture, normally positioned in front of said support for said sheet, three masking slides, each slide having one straight edge parallel to one side of said triangular aperture, supporting means for said slides including members actuated by said lever assembly, said slides adapted to be moved in rotation by said members, during each part exposure one slide being moved across said triangular aperture in a direction substantially at right angles to its straight edge, while the two other slides are being withheld, a filter unit including a support for three filters of three different colors, respectively, and means in operative connection with said lever assembly to rotate and index said filter support between exposures, said second principal part normally positioned above said first principal part in substantially parallel relationship thereto, but adapted to be lifted therefrom by virtue of being hingedly attached thereto, whereby said support becomes accessible for the insertion of a sheet of color print material.

2,450,308
FLUE WASHING NOZZLE HAVING FLUID VALVE OPERATED SIMULTANEOUSLY WITH SEAL IN FLUE
Frank W. Smith, Wellesley, Mass., assignor to The Superheater Company, New York, N. Y.
Application November 19, 1946, Serial No. 710,934
2 Claims. (Cl. 134—166)



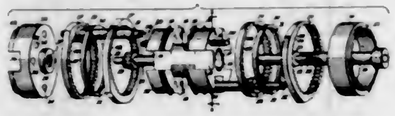
1. Demountable apparatus for cleaning the interiors of tubes such as flues of a locomotive

boiler comprising; an axially movable nozzle tube insertible in a flue having a pair of axially spaced ports formed in a portion of its wall located exteriorly of the flue; sealing means carried by said tube for preventing back flow from the flue of fluid supplied to the nozzle; a sleeve or the like surrounding said outer portion of said nozzle tube and formed with a pair of ports therein adapted to be alined each with one of the ports in said nozzle tube for admitting fluid



thereto; means connected to said sleeve for supplying two separate streams of cleaning fluid to said nozzle through the pair of ports in said sleeve and the alined ports; means for moving said nozzle tube axially sequentially to two spaced positions and acting to seal the flue, aline first one and then the other of the axially spaced ports on said nozzle with the corresponding port in said sleeve for introducing first one and then the other stream of a cleaning fluid to said nozzle.

2,450,309
SIDE GRIPPER FOR SQUARE BOTTOMED PAPER BAG FORMING MACHINES
Allen O. Sohn, Plymouth, Wis.
Application January 9, 1947, Serial No. 721,046
2 Claims. (Cl. 93—8)

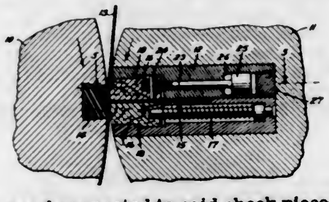


1. In a bag forming machine having a drum mounted on a shaft and on which the bag blank is held during the formation of the bottom of the bag, said drum having a gap in the face thereof at least one edge of which is parallel with the drum axis, a side gripper for holding a portion of the blank to the drum at said edge of the gap, comprising: a hub slidable on the drum shaft and rotatable therewith; a gripper body; a pivotal support for the gripper body carried by the hub, constraining the gripper body to pivotal movement about an axis at all times normal to and spaced from the drum axis and perpendicular to a line radial to the drum axis while enabling movement of the gripper body with the hub axially of the drum; a gripper claw; a connection between the gripper claw and the gripper body guiding relative motion therebetween along a line radial to the drum axis, said claw extending through the gap in the drum and having a part overlying said edge of the gap at a point along the length thereof determined by the axial position of the hub on the drum shaft; and means for adjustably and removably securing the claw to the gripper body.

2,450,310
TUBULAR CONTAINER FOR ELECTRICAL CONDENSERS OR OTHER APPARATUS
Percy Archibald Sporing, Hampton Hill, and Charles Piercy Johnson, Hanwell, England, assignors to The Telegraph Condenser Company Limited, North Acton, England, a British company
Application June 27, 1945, Serial No. 601,836
In Great Britain July 20, 1944
7 Claims. (Cl. 174—77)

1. A metal tubular container for electrical apparatus having in combination an insulating bush located in and occluding one of the open ends of said container, a conductor extending through said bush into the container for electrical connection with the electrical apparatus therein, a metal collar surrounding and in conductive contact with said container, a metal lug attached to said collar and in electrical connection with said conductor, an additional lug on said collar and extending substantially parallel to the axis of the container, and a supporting plate extending between said additional lug and the container and attached to said additional lug.

2,450,311
ADJUSTABLE CAM ACTUATOR
Kenith G. Strunk, East Orange, and Thaddeus A. Lelek, Bloomfield, N. J., assignors to Breeze Corporations, Inc., Newark, N. J., a corporation of New Jersey
Application November 8, 1945, Serial No. 627,442
8 Claims. (Cl. 74—568)



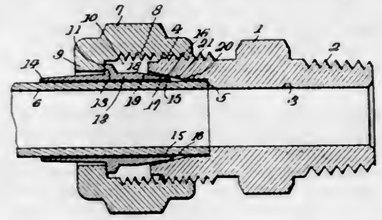
1. In a mechanism for actuating a plurality of driven members, a series of cams individually rotatable upon a common supporting member comprising a hub longitudinally slotted to correspond to the desired number of cams and to receive control shafts therefor, transversely recessed at its center to receive a brake block, having a pair of raised flanges integral therewith on opposite sides of said recess and having a central bore, a brake block associated with each control shaft, means to angularly and individually adjust said cams and means to positively lock the positioned cams.

2,450,312
WEB CUTTING MECHANISM
Paul L. Tollison, North Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, Plainfield, N. J., a corporation of Virginia
Application March 9, 1946, Serial No. 653,401
4 Claims. (Cl. 164—66)

4. In the cutting couple of a printing press, a knife box, a knife in said knife box, cheek

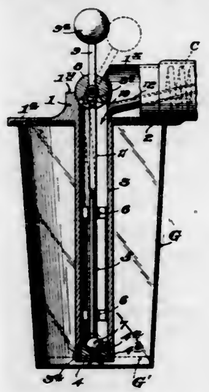
pieces on either side of said knife movable parallel to said knife and perpendicular to its cutting edge, springs for moving said cheek pieces outwardly relative to the cutting edge of said knife, cylinders carried by said knife box, pistons running in said

cylinders and connected to said cheek pieces, fluid in said cylinders and means forming restricted fluid passages between the portions of said cylinders lying on opposite sides of said pistons whereby the outward movement of said pistons and the connected cheek pieces is cushioned.



2,450,313
TOP MILK EXTRACTOR
Frederick H. Valiton, Deer Lodge, Mont., assignor of one-half to Charles L. Colbert, Deer Lodge, Mont.
Application May 22, 1946, Serial No. 671,520
2 Claims. (Cl. 210—51.5)

1. A device of the character described, comprising a bowl portion, an inverted semi-spherical portion formed on the bottom of said bowl portion, an internally threaded lug formed at the center of said semi-spherical portion, a tubular member secured to said lug, an opening in the bottom of said bowl portion communicating with said lug, a downwardly curved collar portion on said semi-spherical portion adapted to engage the upper edge of a container, an opening in said semi-spherical portion and a downwardly curved spout formed on said semi-spherical portion and communicating with the opening therein.



2,450,314
COUPLING FOR FLARELESS TUBES
Lorain N. Vandervoort, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application July 5, 1944, Serial No. 543,553
1 Claim. (Cl. 285—122)

A coupling for tubes comprising a body member having a bore adapted to receive the end of a flareless tube, a nut having threated engagement with said body member and having a shoulder adjacent the outer end thereof, a clamping sleeve disposed within the nut and having a shoulder for engagement with the shoulder on the nut, said sleeve initially having throughout its length a slip-fit clearance with the tube, said body member at the outer end portion of the bore being provided with a relatively long tapered camming surface, said sleeve at the inner end thereof having a relatively thin cylindrical portion and a tapered portion immediately in rear of the cylindrical portion, said cylindrical and tapered portions of the sleeve and the tapered camming surface on the body member being dimensioned and posi-

tioned whereby endwise movement of the sleeve into engagement with the camming surface will cause the inner end of the sleeve to be contracted and to cut into the tube for gripping the same after which the sleeve in the region of the tapered surface will engage the tapered camming surface on the body member and be contracted into engagement with the uncut portion of the tube immediately behind the cut portion so as to provide a gradually releasing grip extending from the cut portion of the tube for a considerable distance over the tube length for arresting vibrations in the tube at a point spaced outwardly from the cut portion of the tube, the slip-fit clearance at the rear portion of the sleeve retaining its initial condition.

2,450,315
BEER FAUCET
Louis F. Vetrano, Oakland, Calif., assignor of three-fourths to William J. Pugh, Oakland, Calif.
Application April 3, 1947, Serial No. 739,111
9 Claims. (Cl. 225—5)

1. In a beer faucet, a base; a tubular portion depending from the base and of length slightly

less than the depth of an ordinary beer glass, said tubular portion having an inlet at its upper end for beer from a source of supply; a valve seat in the lower end of the tubular portion terminating in a reduced bore; a valve stem within said tubular portion having a ball valve on its lower end adapted to engage said seat; a handle having a hub closing the upper end of the tubular portion, said hub having a recess opposite the tubular portion; an arm within said recess; a link pivotally connected to the arm and to the stem, said arm and stem being of such length that when same are aligned with the stem the ball valve will firmly contact said seat; and a pair of abutments on said base adapted to be engaged by the handle whereby when same engages one said abutment the valve will be slightly unseated, and when same engages the other abutment the valve will be entirely unseated.

2,450,316

PREPARATION OF CATALYST FOR USE IN DESTRUCTIVE HYDROGENATION OF HYDROCARBON OILS

Alexis Voorhies, Jr., and William E. Spicer, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application April 25, 1945, Serial No. 590,300
2 Claims. (Cl. 196—53)

1. In the destructive hydrogenation of hydrocarbon oils conducted in the presence of a hydrogenation catalyst comprising an acid-treated bentonitic clay carrier and a hydrogenation catalyst impregnated therein, the improvement which comprises contacting the hydrocarbon oil to be destructively hydrogenated at elevated temperatures and pressures with the said catalyst, which catalyst has been prepared by first subjecting the acid-treated bentonitic clay base to a heat treatment at a temperature within the range of from about 850° to 1,000° F. for a period of about 4 to 8 hours prior to impregnation with the active hydrogenation catalyst.

2,450,317

NICKEL-IMPREGNATED CLAY CATALYST AND PROCESS OF MAKING SAME

Alexis Voorhies, Jr., and William E. Spicer, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Original application April 25, 1945, Serial No. 590,300. Divided and this application June 11, 1946, Serial No. 676,111
2 Claims. (Cl. 252—450)

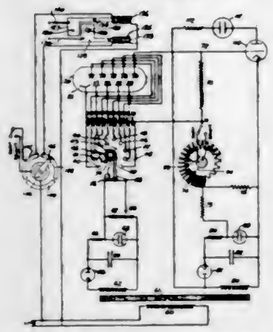
1. The method of forming an active hydrogenation catalyst which consists essentially in subjecting a bentonitic clay to treatment with hydrofluoric acid, thereafter activating the clay by heating the same to a temperature within the range 850° to 1000° F. during a period of 4 to 8 hours, cooling and incorporating metallic nickel into the activated carrier by impregnation.

2,450,318

METHOD FOR PRODUCING POULTRY FEEDS

Richard E. Wagamon, Harbeson, Del.

No Drawing. Application March 23, 1948, Serial No. 16,615
3 Claims. (Cl. 99—4)



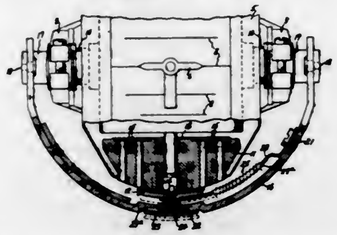
1. The process of producing a feed for poultry which comprises producing a dry bulk mix of grain meal and dry milk solids, moistening the mix with a solution of baker's yeast dissolved in liquid, promptly bagging the moistened mix, and storing the bagged wet mix for at least thirteen hours and up to ninety-six hours so that fermentation thereof produces relatively high alcoholic content.

2,450,319

PHOTOELECTRIC EXPOSURE METER FOR ENLARGERS USING DIFFERENTIAL MEANS TO INDICATE CONTRAST

Louis L. Weisglass, New York, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York

Application April 23, 1946, Serial No. 664,149
5 Claims. (Cl. 88—23)



1. An exposure and contrast meter for photographic enlargers of the type which projects an enlarged image of a photographic negative on an easel comprising a photoelectric cell adapted to be placed on said easel for measuring the light intensity of the brightest and darkest point thereon, an electric circuit operatively connected to said photocell and comprising two part circuits, the first part circuit having an output voltage controlled by said photocell and including, in series with said cell, a resistor upon which said output voltage is impressed, the second part circuit having a rheostat controlling the output voltage of said second part circuit, said rheostat comprising a resistance element and two independently movable contacts in current conducting relationship therewith, these contacts being insulated from each other, and a switch connected to said contacts whereby one of said contacts may be selected to carry said output voltage, depending upon whether said cell has been placed upon the brightest or upon the darkest point on the easel, means to make said two output voltages oppose each each other, means to indicate when the difference of said two output voltages, resulting from the adjustment of said rheostat, assumes a predetermined value, a mechanism comprising three movable members, the first two members controlled by the operator, operatively connected to said two movable contacts, respectively, and adapted to indicate, by the positions assumed by them when the difference of said two output voltages has been adjusted to said predetermined value, the light intensities of the brightest and darkest point on the easel, respectively, the third member in operative engagement with said first two members and adapted to be moved by their coaction in accordance with the ratio of said two light intensities, a first scale element calibrated in exposure time values and a first mark element, one of said elements connected to said first member and the other element being stationary, both coacting to indicate the correct exposure time of said image on said easel, and a second scale element calibrated in contrast values, and a second mark element, one of these last named elements connected to said third member and the other element being stationary, both coacting to indicate the contrast value of said image on said easel.

2,450,320

VARIABLE AIR GAP TURN COMPENSATOR

Harry C. Wendt, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York

Application September 27, 1946, Serial No. 699,904
11 Claims. (Cl. 74—5)

1. In combination, a universally mounted gyroscope, a universally mounted pendulum, an erection system comprising a magnetic element and a cooperating current conducting element, one of said elements being mounted on said gyroscope and the other being mounted on said pendulum, means for rotating one of said elements whereby eddy currents are induced in said current conducting element resulting in an erecting torque on said gyroscope, and means for reducing said erecting torque to a relatively ineffective value comprising an electroresponsive device for increasing the spacing between said elements.

2,450,321

RUST-INHIBITING GREASES

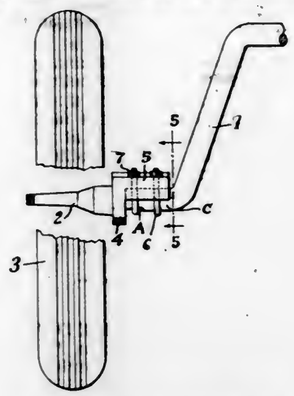
Ernest T. White, Jackson Heights, and Reuben Carl Robinson, New York, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application April 9, 1947, Serial No. 740,495
14 Claims. (Cl. 252—42)

1. An alkali metal rust-inhibiting grease comprising a major proportion of a mineral oil, an alkali metal soap present in sufficient proportion to thicken said oil to a grease consistency, and between about 0.5 and about 2 per cent by weight of a compound having the general formula:

$$Y—R—O(CH_2CH_2O)_5—H$$

where R represents an aromatic nucleus and Y is a member selected from the group consisting of aliphatic, cycloaliphatic, arylaliphatic and aryl hydrocarbon radicals having at least four carbon atoms.



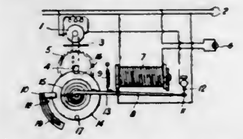
2,450,322

REPLACEMENT AXLE FOR AGRICULTURAL IMPLEMENTS OR THE LIKE

Ralph F. Williams, Hazelton, Kans.

Application September 26, 1947, Serial No. 776,212
1 Claim. (Cl. 301—132)

In an axle comprising a spindle having a head integrally joined to one of its ends, said head having the upper portion of a clamp extending oppositely from that of the spindle, said clamp having a V-shaped seat at its underside resting upon a stub of a worn axle, and U-bolts engaging the underside of the stub and co-acting with the clamp in rigidly binding the stub thereto.

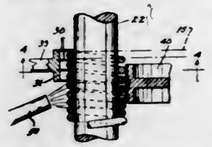


2,450,323

DELAY ACTION CONTROL SWITCH

Stuart Williamson, Reading, England

Application October 3, 1944, Serial No. 557,036
In Great Britain September 14, 1943
4 Claims. (Cl. 175—375)



1. A delay action control device for apparatus which includes a constantly rotating shaft comprising in combination with said shaft a master switch, a relay, an exciting circuit for said relay controlled by said master switch, an armature rocked by said relay, a timing device including a disc mounted for rotation upon said armature in such proximity to said shaft that the periphery of said disc is brought into frictional contact with said shaft upon retraction of said armature, a spring wound by the rotation of said disc, and electrical contacts operated by said timing device after a predetermined extent of rotation of said disc.

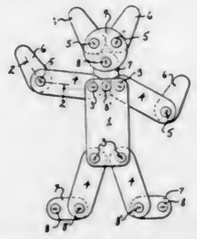
2,450,324

APPARATUS FOR COILING THERMOPLASTIC MATERIAL

Oran C. Wilson, Lakewood, and Philip S. Britton, Bratenahl, Ohio

Application July 7, 1945, Serial No. 603,704
2 Claims. (Cl. 18—19)

2. Apparatus for forming a continuous rod-like strip of thermoplastic material into a spiral coil comprising, means for extruding the material in a flowable condition into a continuous elongated

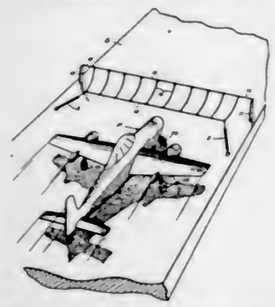


rod-like strip, means for coiling said strip, said means including a rotating mandrel, a controlling device comprising a plurality of spaced plates having circular segmental recesses therein extending around a portion of the mandrel, said plates being spaced apart sufficiently to accommodate one turn of the coil between adjacent plates, a pressure roller acting upon a plurality of turns of the coil on the side of the mandrel opposite the plates, at least one of said turns being partially within said controlling device and another of said turns being beyond said controlling device, a cooling means acting on the turns after they leave the controlling device, and means for rotating the roller independently of the mandrel and in a direction opposite to that of the mandrel.

2,450,325
OUTDOOR CARD GAME DEVICE
Samuel Zirin, Brooklyn, N. Y.
Application October 11, 1945, Serial No. 621,681
1 Claim. (Cl. 273—136)

A card game board for outdoor use, comprising a board having right and left sections hinged to fold on each other, each side of said board having an infolded edge portion providing a marginal retaining pocket parallel to said side, each section having a transversely spaced row of holes, the row of holes of one section being spaced out of line registration with the row of holes of the other section, and an elastic cord threaded through each row of holes, providing elastic retaining loops between the holes under which cards may be placed to be held against wind displacement.

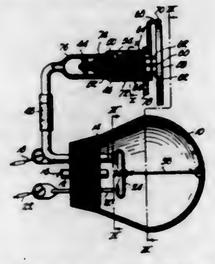
2,450,326
INTERCHANGEABLE TOY
George E. Berger and Julia A. Berger, Two Rivers, Wis.
Application May 16, 1946, Serial No. 670,249
1 Claim. (Cl. 46—22)



An educational toy figure, comprising a plurality of structural elements fabricated from sheet material, capable of being assembled by ordinary buttoning into representations of animals or caricatured figures, certain elements having buttons attached thereto and other elements having matched button holes therefor, whereby interchangeability of the elements is effected to vary the figure.

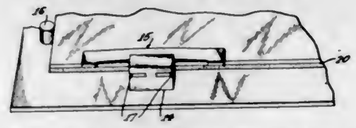
2,450,327
HEAT-RESISTANT COATING COMPOSITION
Howard D. Cogan, Glenshaw, Pa., and Newton H. Ketcham, Flushing, N. Y., assignors to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application April 1, 1944, Serial No. 529,172
3 Claims. (Cl. 106—287)

1. A heat resistant coating composition strongly adherent to non-porous metal surfaces and adapted to protect phosphatized metal surfaces normally subjected to temperatures ranging from 500° F. to around 1350° F., which composition comprises (1) a partially hydrolyzed lower alkyl ester of a silicic acid in which each of the alkyl groups contains no more than four carbon atoms; (2) between 10% and 40% by weight, based on the total solids content of the composition, of finely divided mica; (3) water in amount approximately completing the hydrolysis of said partially hydrolyzed ester and providing a mixture of highly condensed esters by the hydrolytic condensation of said partially hydrolyzed and condensed ester; and (4) a heat-resistant corrosion-inhibitive inorganic pigment.



2,450,328
AIRCRAFT BARRIER
Robert B. Cotton, Lansdowne, Pa., assignor to All American Aviation, Inc., a corporation of Delaware
Application January 16, 1946, Serial No. 641,424
8 Claims. (Cl. 244—110)

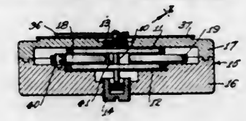
1. In an aircraft barrier, upper and lower substantially horizontal cables, a plurality of cross members connecting said cables, support means for said upper cable, said lower cable being offset toward the approach side of a landing aircraft with respect to said upper cable, anchoring means, and a line of undrawn synthetic plastic fibers having one end secured to said anchoring means and the other end to said lower cable.



2,450,329
PNEUMATIC TIMING SWITCH FOR ELECTRIC CIRCUITS
Earl C. Deane, North Kansas City, Mo.
Application April 30, 1945, Serial No. 591,125
7 Claims. (Cl. 200—34)

1. An electric switch of the character described, comprising a normally inflated, compressible bulb of non-conducting material having an air outlet port and an air inlet port; contacts within the bulb, movable to and from the circuit closing position as the bulb is deflated and inflated respectively; and manually settable means for controlling the entrance of air into the bulb through said inlet port after the bulb has been deflated to a condition closing the contacts therein, said settable means having a slidable valve adapted for

quick manual release permitting inflation of the bulb through said inlet port in a minimum amount of time and without the influence of the speed controlling means.



2,450,330
FASTENING DEVICE FOR COVER PLATES
Clarence A. de Giers, Forest Hills, N. Y., assignor to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware
Application February 24, 1945, Serial No. 579,533
2 Claims. (Cl. 24—259)

1. The combination with a frame and a cover to be secured thereto in a predetermined position, said frame having a part rigid therewith adjacent to an edge of the cover at said predetermined position, which part has a slot formed therein extending laterally away from the adjacent edge of said cover, of a clip securing said cover to said frame, said clip comprising an elongate strip of resilient material positioned to extend along said edge, a lateral extension of said strip slidingly received in said slot, ears at portions of said strip remote from said extension, said ears projecting laterally fro mthe main plane of said strip on the same side thereof as said extension and positioned to extend laterally out of the plane of said strip and over the edge of said cover at the operative position of said strip, said slot being disposed at such a position in respect to said cover that when said ears rest on the surface of said cover in moving said clip toward its operative position, said strip must be flexed to permit said lateral extension to be inserted into said slot.

2,450,331
POINTER RETURN DEVICE
Clarence A. de Giers, Forest Hills, and Soren B. Osterlund, St. Albans, N. Y., assignors to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware
Application December 8, 1945, Serial No. 633,800
6 Claims. (Cl. 171—95)

6. A rotor return device for a measuring instrument including a magnet rotor, comprising a pair of stationary magnets mounted in spaced positions such that when the rotor is in the center of a dead zone one pole of each stationary magnet is located in a predetermined position closely adjacent to a portion of the repellable rotor pole which has large change in strength per unit length along the rotor circumference, one stationary pole being placed adjacent to a rotor pole portion changing its pole strength distribution in one direction and the other stationary pole being placed adjacent to a second rotor pole portion

changing its pole strength distribution in the opposite direction for effecting relatively large opposite changes in the direction and strength of the balanced repulsion forces from the respective poles of the stationary magnets in response to a comparatively small rotor movement away from the said center of dead zone rotor position.

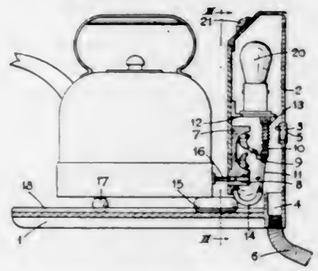
2,450,332
POLYCARBOXY ESTERS OF DIMERIZED 9,11-LINOLO-DIRICINOLEIN AND METHOD OF MAKING SAME
Melvin De Groote, University City, Mo., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Original application July 13, 1945, Serial No. 604,990. Divided and this application November 5, 1946, Serial No. 707,977
8 Claims. (Cl. 260—405)

1. An acidic partial ester of a polycarboxy acid with dimerized 9,11-linolo-diricinolein.

2,450,333
POLYHYDRIC ALCOHOL ESTERS
Melvin De Groote, University City, and Arthur F. Wirtel, Kirkwood, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Original application July 13, 1945, Serial No. 604,994. Divided and this application November 5, 1946, Serial No. 707,979
8 Claims. (Cl. 252—405)

1. An acidic partial ester containing: (*a*) A polyhydric alcohol radical; (*b*) A diglycollic acid radical; and (*c*) An acyloxy radical containing 8 to 32 carbon atoms derived from a detergent-forming monocarboxy acid having 8 to 32 carbon atoms, at least one polyhydric alcohol radical being ester-linked with a group containing said acyloxy radical and the number of said groups ester-linked with at least one polyhydric alcohol radical being less than the valency of said polyhydric alcohol radical.

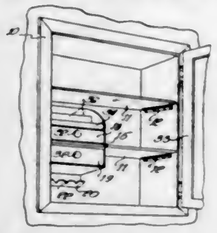
2,450,334
PRODUCTION OF ARYL SUBSTITUTED ETHYLENIC COMPOUNDS
James Kenneth Dixon, Riverside, and Donald R. May, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 21, 1945, Serial No. 611,925
6 Claims. (Cl. 260—668)



1. A process which comprises mixing a substance selected from the class consisting of diaryl substituted paraffins having at least two carbon atoms in the paraffin chain and in which both aryl groups are attached to the same carbon atom and their nuclear substituted derivatives with water vapor as a diluent, contacting the resulting

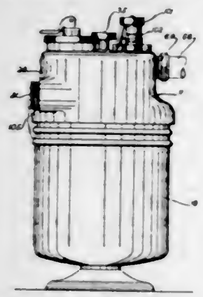
mixture thereof with a metal chromite catalyst, said metal having an atomic number from 23 to 29, inclusive, and maintaining the temperature of said mixture at a temperature of about 400° C.–650° C. during the time it is in contact with said catalyst.

2,450,335
FOOD PRODUCT AND METHOD OF PRODUCTION
William Peter Martin Grelck, Baltimore, Md., assignor of one-half to Linn J. Firestone, Arlington, Va.
No Drawing. Application April 26, 1946, Serial No. 665,336
2 Claims. (Cl. 99—204)



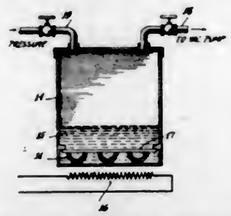
1. The process of treating canner's waste vegetable materials to preserve the original food characteristics of said materials including their carotene content comprising the steps of grinding the same to produce with the moisture content of the combined materials a slurry, subjecting the slurry to fermentation to produce a lactic acid content in quantity of between one and two percent of said slurry and rendering the latter to a paste of semi-solid consistency by removing in vacuo surplus moisture to approximately one-half to one-third of the original volume.

2,450,336
ELECTRICAL COUPLING DEVICE PARTICULARLY FOR ELECTRIC HEATING APPLIANCE STANDS
Thomas John Hall, Betchworth, England
Application February 4, 1946, Serial No. 645,437
In Great Britain November 7, 1945
4 Claims. (Cl. 219—43)



1. An electric coupling device for connecting an electric heating appliance such as a kettle to the electric mains, comprising the combination of a support having a housing upstanding from the rear end thereof, a socket connector comprising an insulated body mounted within the housing and having sockets opening in the front wall and located above an entrance aperture into said housing, socket terminals mounted in and inset from the mouth of the sockets, a complementary plug connector having terminals projecting from said appliance, a grooved guide extending from front to rear of said support towards the front wall of the housing for slidable engagement with the appliance to guide the plug terminals into the sockets, a guard shroud on one of said connectors which covers the plug terminals and electrically insulates them from external connection during engagement with or disengagement from the socket terminals, a projection on the appliance arranged to pass through the apertured entrance in the housing as the plug terminals move into the sockets and an electric switch device in said housing and having a spring returned operating member so disposed in relation to the apertured entrance in the housing that it is moved by the projection to close the switch during the engaging movement of the plug terminals into the socket terminals.

2,450,337
AUXILIARY UTILITY CABINET
Frank T. Hearst, Dallas, Tex.
Application November 2, 1946, Serial No. 707,365
7 Claims. (Cl. 312—154)

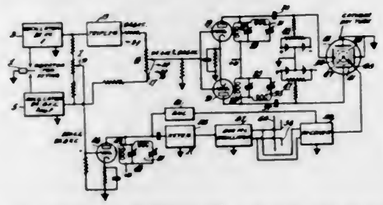


4. A utility cabinet comprising, in combination with a shelved wall cabinet, upper and lower sections joined along their frontal portions in vertically spaced relationship to define a space for receiving a shelf of said wall cabinet, an end plate also joining said sections at their ends and having a U-shaped bend intermediate its ends defining a channel receiving an end of said shelf for clamping engagement therewith.

2,450,338
VALVE STRUCTURE FOR CONTROLLING FLOW OF GASES THROUGH ABSORBERS
Jay A. Heidbrink, Minneapolis, Minn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application September 3, 1946, Serial No. 694,528
5 Claims. (Cl. 128—191)

1. An absorber unit, comprising a canister formed with a plurality of chambers for holding independently of each other a supply of carbon dioxide absorber material such as soda lime, a casting secured to an end of the canister having a bottom wall and a transverse partition to form respective exhalation and inhalation chambers, a separate tube opening through the bottom wall into the exhalation chamber and the inhalation chamber respectively, an independent opening through said bottom wall into each of said absorber chambers, and a valve member in the exhalation chamber adapted to open communication therefrom to each of the absorber chambers or two thereof together.

2,450,339
METHOD OF MAKING POROUS METAL FILTERS
Franz R. Hensel, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application September 17, 1943, Serial No. 502,740
3 Claims. (Cl. 29—148)

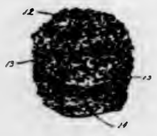


1. The method of making a micro-porous metal filter which comprises providing a thin sheet of a dense and non-porous alloy of a low boiling metal selected from the group consisting of cadmium and zinc and of at least one higher boiling metal, heating the sheet in a non-oxidizing atmosphere and under reduced pressure to the vaporization temperature of the low boiling metal but below the melting point of the alloy, and maintaining said sheet at said temperature and pressure until a substantial proportion of said low boiling metal is removed therefrom and a continuous network of minute filtering pores is provided therein.

2,450,340
SILVER BASE ALLOY FOR METAL EVAPORATION
Franz R. Hensel and Earl I. Larsen, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application February 3, 1944, Serial No. 520,974
1 Claim. (Cl. 75—173)

An alloy wire for metal evaporation composed of about .04% phosphorus, 5% platinum and the balance of silver.

2,450,341
SENSITIVE DISTANCE MEASUREMENT DEVICE
William D. Hershberger, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1940, Serial No. 358,776
13 Claims. (Cl. 343—13)

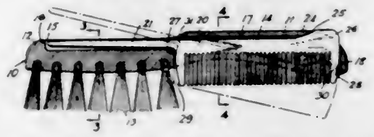


1. A distance measuring device including in combination a pair of oscillators for generating currents of different frequencies, means for keying alternately said oscillators, a cathode ray tube including means for rotational and radial deflection of said ray, means for applying the outputs of said oscillators to said rotational deflecting means to rotate said ray at rates of angular rotation corresponding to the frequencies of said oscillators, means for transmitting sharply defined pulses, second keying means interconnecting said oscillators and said transmitting means, means for receiving the transmitted pulses after reflection, and means for applying voltages derived from said receiving means to said radial deflecting means to deflect said ray radially.

2,450,342
CHLOROHYDROXYNITROPHENYL SULFIDE
William F. Hester, Drexel Hill, and W E Craig, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 7, 1947, Serial No. 767,318
1 Claim. (Cl. 260—609)

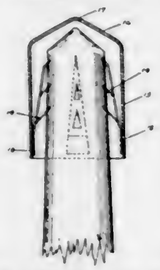
As a new chemical compound, bis(2-hydroxy-3-nitro-5-chlorophenyl) sulfide.

2,450,343
TREATING OXIDE ORES
John J. Howard, Philadelphia, and Harold A. Heiligman, Norristown, Pa., assignors to E. J. Lavino and Company, Philadelphia, Pa., a corporation of Delaware
Application February 1, 1947, Serial No. 725,834
3 Claims. (Cl. 23—110)



1. The process of recovering iron from ores consisting essentially of iron oxides and silica, which comprises mixing the ore with sufficient carbonaceous material to effect reduction of the iron oxides and sufficient calcium oxide yielding material to provide a CaO to SiO_2 ratio in the starting mixture that lies in a range of from 1.5 parts to 3.0 parts of CaO to 1 part of SiO_2 by weight, forming the mixture into compact shapes, subjecting the shapes to a temperature of approximately 2900° F. whereby the iron oxides are reduced to iron and formed into globules in a matrix substantially alpha calcium orthosilicate, cooling the resulting mass to atmospheric temperature to invert the calcium orthosilicate from its alpha form through its beta form and finally to its gamma form whereby during the latter inversion there is such a significant increase in volume that the matrix disintegrates into discrete particles, and recovering the iron.

3. The process of producing a refractory raw material which comprises mixing a starting material consisting essentially of iron oxides and silica with a carbonaceous reducing agent and a calcium oxide yielding material, adjusting the proportion of CaO to SiO_2 in the mixture to fall within a range of from 1.5 parts to 3.0 parts of CaO to 1 part of SiO_2 by weight, forming the mixture into shapes by pressure, subjecting the shapes to a temperature of substantially 2900° F. to re-

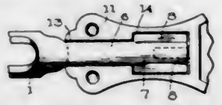


duce the iron oxides of the ore to iron and to form a calcium orthosilicate matrix, cooling the resulting mass to disintegrate the calcium orthosilicate, and recovering the calcium orthosilicate.

2,450,344
COMB AND BRUSH SET
Albert H. Jung, Flushing, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application January 17, 1947, Serial No. 722,656
6 Claims. (Cl. 132—85)

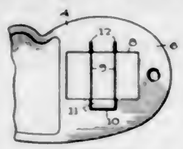
1. A brush having a handle member comprising a handle and a brush back, the handle having a first longitudinal groove therein extending partway through the thickness thereof from the front face thereof and having a substantially continuous rear face, said groove thereby being closed along the major part of the rear side of the groove, the brush back having a second longitudinal groove therein extending partway through the thickness thereof from the rear face thereof toward the front face, said second groove thereby being closed along the major part of the front side of said groove, the first and second groove communicating at the adjacent ends thereof, the handle having an opening at that end wall of the first groove which is remote from the second groove, said opening extending through the handle and being adapted to receive a projection on the back of the toothed part of a comb frictionally held in the first groove.

2,450,345
PROTECTIVE CAP FOR WOOD POSTS, POLES, AND THE LIKE
William Martin Kervin, Montreal, Quebec, Canada
Application November 18, 1944, Serial No. 564,121
In Canada March 6, 1944
1 Claim. (Cl. 20—100)



A protection cap for wood posts, poles and the like comprising a tubular cover having a closed end and an open end and adapted to enclose the exposed end of the article to be protected, and a plurality of engaging members having fixed ends secured to the inner surface of the said cover adjacent to the open end thereof and having free ends extending inwardly and toward the closed end of said cover, and a plurality of prongs extending inwardly and toward the closed end of said cover from the inner surfaces of said engaging members and secured thereto.

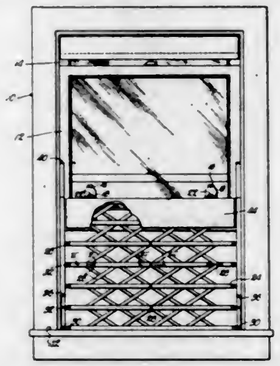
2,450,346
KITCHEN UTENSIL
James E. Krilow, Atlantic City, N. J., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J., a corporation of New Jersey
Application May 16, 1944, Serial No. 535,786
2 Claims. (Cl. 30—278)



1. A kitchen utensil including a bi-sectional handle having meeting faces each of which has a semi-cylindrical groove extending inwardly from one end to form a socket when the handle sections are assembled, a guided paring blade substantially coaxial with the handle and having an extension rotatably mounted in said socket, an offset recess for the socket formed by alined offsets on the grooves of each handle section, and a wedge shaped reduced offset on the blade extension positioned in the offset recess of the socket to limit rotation of the blade.

2,450,347
PARING UTENSIL
James E. Krilow, Atlantic City, N. J., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J., a corporation of New Jersey
Application June 2, 1945, Serial No. 597,213
4 Claims. (Cl. 30—278)

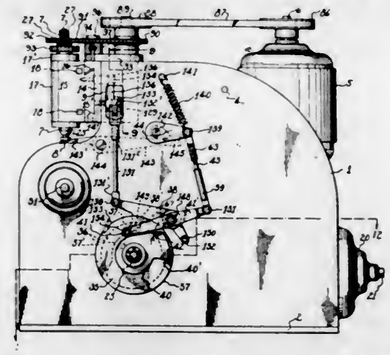
3. A paring utensil including a bi-sectional handle having meeting faces each of which has a semi-cylindrical groove extending inwardly from one end and terminating in an offset recess to form a socket when the handle sections are assembled, a guided paring blade substantially coaxial with the handle and having an extension provided with an annular journal rotatably mounted in the grooved portions of the assembled handle, and wings on said blade extension cooperating with the offset recesses of the socket to limit rotation of the blade.



2,450,348
VEGETABLE SLITTING UTENSIL
James E. Krilow, Atlantic City, N. J., assignor to Boardwalk Enterprises, Inc., Atlantic City, N. J., a corporation of New Jersey
Application June 2, 1945, Serial No. 597,214
2 Claims. (Cl. 30—304)

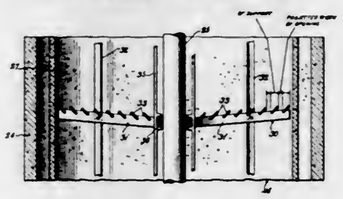
1. A vegetable slitter comprising a bi-sectional support, each section having a walled aperture alined with the other when the sections are assembled in face to face contact, the portion of the section adjacent each aperture being provided with spaced sockets opening through the

wall of the aperture and contact face at one side of the aperture and an inset wall shelf at the other side of the aperture also opening through the contact face, said sockets and shelves being alined when the sections are in face to face contact, and a U-shaped cutter enclosed in the support when the sections are assembled with its base seated on the alined shelves and its arms extending across the aperture and seated in the opposite alined sockets.



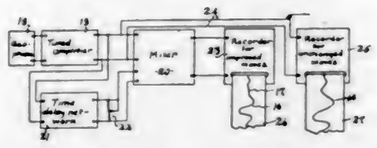
2,450,349
GUARDED WINDOW ASSEMBLY
John L. Mayer, Kansas City, Mo.
Application March 17, 1945, Serial No. 583,303
8 Claims. (Cl. 160—34)

2. A window assembly of the character described comprising a frame; a sash slidably mounted in the frame; an expansible grille having a portion at the bottom edge thereof anchored to the frame for swinging movement to and from a position substantially parallel to the sash; a bracket on the sash for engaging the grille at the top edge thereof; channels on the frame along the side edges of the grille; guide lugs on the grille arranged to slide in channels as the grille is moved to and from the expanded position as the sash is opened and closed respectively; and an apron on the grille for housing the same when collapsed.



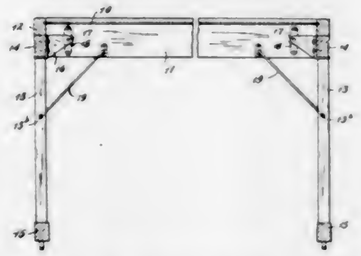
2,450,350
MILLING MECHANISM
Eric T. Nord, Amherst, Ohio, assignor to U. S. Automatic Corporation, Amherst, Ohio, a corporation of Ohio
Original application July 26, 1943, Serial No. 496,169, now Patent No. 2,381,921, August 14, 1945. Divided and this application June 27, 1944, Serial No. 542,412
2 Claims. (Cl. 90—15)

1. Milling mechanism having a frame formed with a sliding surface, a milling head formed with a cooperating sliding surface, a rotatable milling spindle mounted in the head, means for rotating the spindle, a shaft rotatably mounted in the frame and means for rotating the same, a plate secured to the shaft and having a flange formed with a roller groove, the flange having a cam surface with a low part forming a wall of the groove, a roller engaged by the cam, a pivotal support for the roller in which it is rotatably mounted, and connections between said support and the milling head effecting reciprocatory sliding movements of the latter, the milling head engaging the frame with frictional resistance to sliding movement sufficient to maintain the roller in intimate contact with the high point of the



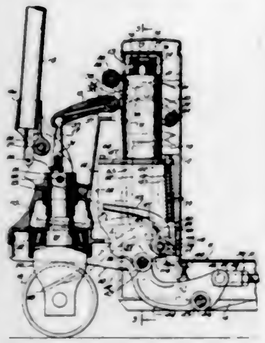
cam, and cooperating means mounted on the plate and the roller support for positively directing the roller into the groove.

2,450,351
APPARATUS FOR WASHING GEL PELLETS
John W. Payne, Peter D. Valas, and Edwin H. Atwood, Woodbury, and Eric V. Bergstrom, Short Hills, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application March 8, 1945, Serial No. 581,690
11 Claims. (Cl. 134—102)



1. In a washer for washing spheroidal hydrogel pellets and for sluicing washed pellets from said washer; a side wall and bottom defining a washing tank, a central well in said tank, means to withdraw a fluid stream from the bottom of said central well, means to flow a stream of washing fluid through said tank from top to bottom, an annular partition inside and spaced from said side wall having the top edge thereof below the top of said side wall and the bottom edge near said bottom of said tank, an annular wall spaced inwardly from said partition having its top edge above and its bottom edge a short distance below the said top edge of said partition, means to induce upward flow of fluid between said partition and said annular wall, a plurality of decks mounted for rocking motion about a horizontal axis spaced about two-thirds of the distance from the said well inside said partition at levels vertically spaced about two to three feet; each of said decks comprising a plurality of slats parallel to and spaced one from another to provide openings through said decks between said slats, the projected width of said slats on a horizontal plane being about six inches, and greater than the projected width of said openings, said slats having their upper surfaces inclined to the horizontal at an angle of about 30° to 60°; and means to cause rocking motion of said decks.

2,450,352
SEISMIC WAVE CORRECTION MEANS AND METHOD
Raymond G. Piety, Yonkers, N. Y., assignor to Phillips Petroleum Company, a corporation of Delaware
Application July 25, 1944, Serial No. 546,567
3 Claims. (Cl. 177—352)



1. In an apparatus of the type described, the combination comprising means for converting physical vibrations into electrical currents comprising closely succeeding wave trains, a tuned amplifier connected to said means and having an output circuit, means connected in said output circuit for generating a similar current delayed in time one-half cycle, said means comprising a time delay network having a substantially linear response over a frequency range and including a plurality of cascaded vacuum tubes, means connected in said output circuit and to said last means for algebraically adding said currents, and means for converting said added currents into a graphic representation thereof.

2,450,353
FOLDING TABLE
Alfred E. Puls, Cleveland, Ohio, and Edward R. Swenson, Metropolis, Ill., assignors to Metropolis Bending Company, Metropolis, Ill., a corporation of Illinois
Application May 16, 1945, Serial No. 594,110
2 Claims. (Cl. 311—98)

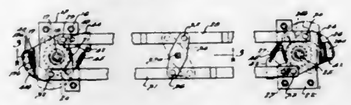
1. A foldable table having a top comprising an apron and supporting members each of which is hingedly connected to an apron member, and means for maintaining the supporting members in extended table-supporting position, said means comprising resilient brace rods each having one end bent at substantially right angles therefrom and projecting through a bore extending into the appropriate supporting member from one side thereof, the extreme end of such bent portion being provided with a lateral extension thereof to prevent withdrawal of such end portion from such bore, and means for detachably connecting the opposite end of each brace rod with the apron member to which the supporting member is pivotally connected, the said means comprising a retaining plate connected to the said apron member and provided with an aperture and the apron member having a recess registering with the said aperture, and the said opposite end of the said rod being bent at right angles and projecting through said aperture and into the said recess.

2,450,354
CONTROL LEVER
George Quayle, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Original application July 25, 1940, Serial No. 347,466. Divided and this application May 2, 1942, Serial No. 441,417
4 Claims. (Cl. 74—533)

1. In a combination of the class described, a control pedal, means mounting said pedal for movement into three controlling positions, a spring pressing said pedal into its first or normal position, said pedal being movable manually against said spring pressure to its second position, yielding detent means constructed and arranged for maintaining said pedal in said second position against the pressure of said spring tending to return it to its first position, said pedal being manually movable further against the pressure of said spring to its third position and being free of detent control in its third position, said pedal when released for free movement from said third position to said first position moving swiftly under the pressure of said spring to said first position, said pedal in said movement striking and overcoming said yielding detent means by the momentum of said swift movement, and said yielding detent means halting the return of said pedal at said second position when said pedal is returned slowly under manual control from said third position.

2,450,355
BRAIDED SLING
David S. Robbins, Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application February 19, 1948, Serial No. 9,409
5 Claims. (Cl. 87—8)

1. A sling comprising four endless units forming a body portion and two eye portions, two of said units being made of left lay rope and the other two of right lay rope, said body portion being formed of two pairs of substantially parallel right lay ropes and two pairs of substantially parallel left lay ropes braided together, each of said eye portions being formed of two left and two right lay ropes, and a splice for one left lay rope and a splice for one right lay rope located in each eye portion, some of the endless units being of different lengths than other of the endless units



so as to equalize the stress among the various ropes.

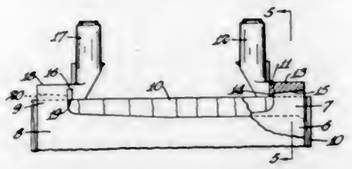
2,450,356
BRAIDED SLING AND METHOD OF MAKING THE SAME
David S. Robbins, Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application July 31, 1946, Serial No. 687,462
6 Claims. (Cl. 87—8)

1. The method of forming an eight-part sling from two left lay ropes and two right lay ropes which comprises arranging one left and one right lay rope into a substantial V-shape with each leg of the V having one left lay and one right lay rope, gripping the ropes at the apex of the V, braiding the ropes together, opening up the braid sufficient to weave one end of the second left lay rope against one leg of the first left lay rope, weaving the other end of the second left lay rope against the second leg of the first left lay rope, weaving one end of the second right lay rope against one leg of the first right lay rope, weaving the other end of the second right lay rope against the second leg of the first right lay rope, and splicing the free ends of each rope together to form an endless unit after weaving is completed.

2,450,357
LOCKING MECHANISM
John H. Roethel, Detroit, Mich., assignor to Roethel Engineering Corporation, Detroit, Mich., a corporation of Michigan
Application January 25, 1945, Serial No. 574,575
19 Claims. (Cl. 292—26)

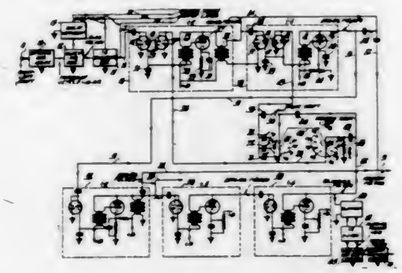
1. Locking mechanism for an up and down swinging lid or closure hinged to a body, comprising a pair of spaced locking members pivoted to the lid adjacent opposite sides thereof and having portions movable into and out of engagement with keeper members on the body, a pair of links pivoted at corresponding ends at vertically spaced points to said locking members, and means for shifting said links endwise in unison and substantially in parallelism to swing said locking members into and out of locking positions.

2,450,358
LINE TIGHTENER AND FASTENER
Pasquale Romano, Norwalk, Conn.
Application November 2, 1945, Serial No. 626,341
3 Claims. (Cl. 24—115)



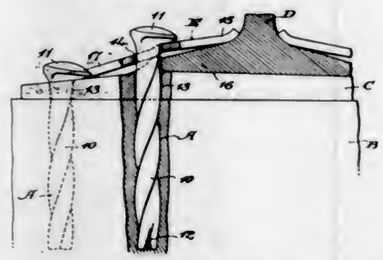
1. A line tightener and fastener comprising a body having a line-receiving aperture intermediate the ends and opposed shanks projecting from each end, an eyelet at the end of one shank, and, adjacent the end of the other shank, a line-receiving roller disposed on one side thereof and an angularly disposed arm on the other side of the shank forming a V-shaped notch with the shank.

2,450,359
BATTERY PLATE-CONNECTING STRAP
William C. Sargent, St. Paul, Minn., assignor to National Battery Company, St. Paul, Minn., a corporation of Delaware
Application March 24, 1944, Serial No. 527,984
3 Claims. (Cl. 136—134)



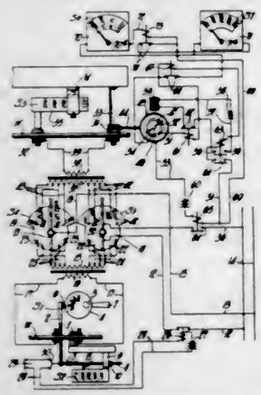
1. A unitary metallic terminal for a storage battery cell having a group of plates and separators projecting above the upper edges of the plates, comprising a horizontally elongated bar formed with a downwardly projecting flange extending the full length of the bar, the lower edge of said flange being substantially straight and

horizontal and adapted to be disposed at an elevation to engage the upper edges of substantially all of the separators located beneath the bar in the cell, an integral post projecting from said bar and a row of fingers integral with said bar



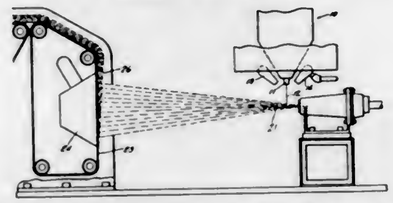
and projecting substantially horizontally from one longitudinal side of said bar, the entire bottom surfaces of said fingers being offset upward from the lower edge of said flange and extending obliquely upward to their ends remote from said bar.

2,450,360
TIMING MARKER AND STATION SELECTION APPARATUS
Earl Schoenfeld, Mamaroneck, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application August 31, 1944, Serial No. 552,146
9 Claims. (Cl. 250—27)



8. A timing pulse generator comprising a stable oscillator and a chain of frequency dividers connected to receive signal from said oscillator, at least two of said dividers being of the counter circuit type including a storage capacitor that is charged in steps in response to the application of successive pulses, each of said two dividers including a count subtracting circuit comprising means for charging said storage capacitor an additional predetermined number of steps in response to the application of a pulse to make the divider lose a predetermined number of counts, and switching means having successive station selection positions for selectively applying the output pulses to said chain to the second of said count subtracting means and for increasing the number of counts subtracted at every other switch position and for selectively applying said output pulses to both of said count subtracting means at the switch positions located between said every other switch positions for obtaining a plurality of selected repetition periods for said output pulses, the number of repetition periods that may be selected being greater than the number by which any one frequency divider of the chain divides the frequency.

2,450,361
SPIKE FASTENING MEANS FOR RAILWAY TRACKS
Richard T. Scholes, Hinsdale, Ill.
Application April 7, 1945, Serial No. 587,178
3 Claims. (Cl. 238—372)

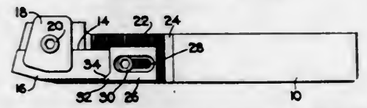


1. In combination, a railway cross-tie, a tie-plate superimposed thereon, a rail seated upon said tie plate and holding the same against rotation, a rail-holding clip having its inner portion overlying a flange of the rail, the outer portion of said clip extending outwardly beyond the edge of the rail flange into overlying relationship to the tie-plate, the said outer portion of said clip and the tie-plate having alined spike-accommodating openings therein, and a headed spike including a shank twisted uniformly throughout its length and extending through said openings and driven into the tie, the head of said spike overlying said clip and holding the latter under downward flexure, the shank of said spike being of polygonal shape in cross section, the opening in said clip being of polygonal shape and of a size to prevent longitudinal movement of said spike relative to said clip except by rotary movement of said spike relative to said clip, and means holding said clip against rotation.

2,450,362
DEVICE FOR ELECTRIC RESISTANCE HEATING OF METALS AND CONTROLS THEREFOR
William H. Scott, Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application March 2, 1945, Serial No. 580,680
4 Claims. (Cl. 219—11)

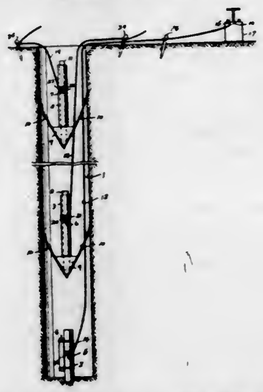
1. A device for electric resistance heating metals that decalesce when heated above a predetermined temperature comprising means for engaging metal at opposite sides of a region to be heated, a heating circuit for passing current through the metal and thereby heating it, a control circuit, an auxiliary control circuit, relay means in said control and auxiliary control circuits energizing said auxiliary control circuit on interruption of said control circuit, means interrupting said control circuit on decalescence of the metal, and time delay means in said auxiliary control circuit for interrupting said heating circuit after a predetermined interval, independent of dimensional changes in the metal after decalescence.

2,450,363
METHOD AND APPARATUS FOR MAKING FINE GLASS FIBERS
Games Slayter and Ed Fletcher, Newark, Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio, a corporation of Delaware
Application January 4, 1945, Serial No. 571,304
7 Claims. (Cl. 18—2.5)



7. Apparatus for making fine glass fibers comprising a receptacle for molten glass having orifices in a wall thereof through which flow streams of molten glass, blowers at opposite sides of and in proximity to the orifices to direct blasts of gas onto the streams in the general direction of stream flow to attenuate and cool the streams to a degree whereby they are sufficiently solidified to be projected transversely into a melting and attenuating blast while maintaining the alignment of the streams, and a burner spaced in the direction of stream flow from said blowers and more remote from said receptacle than said blowers for directing an intensely hot high velocity blast onto the ends of the filaments and in a direction transversely of the direction of travel of the filaments as they are attenuated to melt the filaments and further attenuate them to fine fibers.

2,450,364
WRAPPER FOR FROZEN CONFECTIONS
Sidney B. Smith, Hollis, N. Y.
Application June 30, 1945, Serial No. 602,595
3 Claims. (Cl. 99—180)

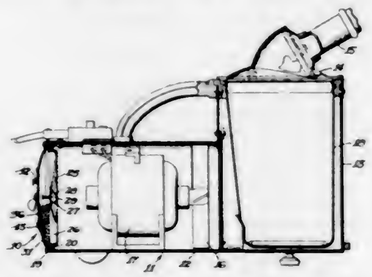


1. A wrapper for a frozen confection mounted on the end of a stick, said wrapper comprising, when opened to expose the confection for consumption, a container having the shape of a hollow inverted pyramid, the lower end of said inverted pyramid-shaped container having a small opening formed therein through which the stick extends, the stick being held snugly in said hole to provide a relatively fluid tight slit between said stick and said container, the upper end of said container being open and being relatively widely spaced from the frozen confection, thereby confining a layer of cooled air around said confection to reduce its melting rate, said container serving also, by reason of its spaced relationship with respect to the frozen confection, as a catch basin for the drippings therefrom.

2,450,365
TOOLHOLDER
Harold L. Thompson, Athol, and Nathaniel King, Fitchburg, Mass., assignors to ATF Incorporated, a corporation of New Jersey
Application June 7, 1945, Serial No. 597,984
5 Claims. (Cl. 29—96)

1. A tool holder comprising an elongated shank having a cutaway portion defining a projection at one end thereof and providing a tool bit supporting surface and a side wall abutment for the tool bit, an adjustable screw-held backing-up plate arranged on said shank for endwise abutment of the tool bit, and a screw clamp arranged on said projection and having a flange extending along and over the side of said projection opposite the said side wall, said screw clamp being adapted to maintain a tool bit in operative cutting position in the tool holder in abutment with said backing-up plate and side wall.

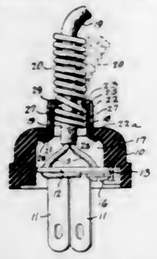
2,450,366
APPARATUS AND METHOD FOR SEISMOGRAPHIC EXPLORATION SHOOTING
Jerry D. Williams, Ninnekah, Okla.
Application November 24, 1944, Serial No. 565,037
1 Claim. (Cl. 102—21.8)



In apparatus for seismographic shooting; an anchor for an explosive charge adapted to be lowered into a bore hole and comprising, a support of an approximately triangular shape, in ele-

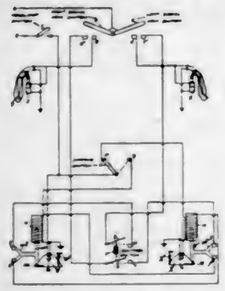
vation, with an apex pointed downwardly and whose upper end is formed with an approximately horizontal supporting surface, an explosive charge on said surface whose transverse diameter is not substantially greater than the width of said surface, a post secured to one side of, and upstanding from, the support, means for securing the charge to the post, wall engaging members secured to the downwardly converging margins of the support and diverging upwardly from the support and whose free ends are adapted to yieldably engage the wall of the bore to prevent substantial upward movement of the anchor in the bore, said support post and said wall engaging members forming shields for the charge to shield the charge against the force of an explosion in the bore beneath.

2,450,367
METHOD OF MAKING AMINO-SUBSTITUTED ACRIDINES
Harry James Barber, Gidea Park, England, assignor to May & Baker Limited, Dagenham, England, a British company
No Drawing. Application May 9, 1944, Serial No. 534,797. In Great Britain April 6, 1943
7 Claims. (Cl. 260—279)



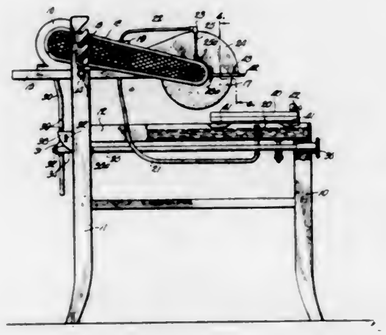
5. A process for the manufacture of a 5-amino acridine compound which consists in reacting a 5-acridyl ether with a salt selected from the group consisting of ammonium salts and salts of primary and secondary amines in an aqueous alcoholic reaction medium having a pH of at least 7 and at a temperature of between 50° and 60° C., separating from the reaction mixture the 5-amino acridine salt thus formed and basifying the product to isolate the corresponding 5-amino acridine compound.

2,450,368
FILTER AND DEMOTHER
Berry A. Baxter, Altadena, Calif.
Application December 1, 1944, Serial No. 566,219
2 Claims. (Cl. 21—127)



1. A vacuum cleaner including a body having a collar at one end, a filter support in said collar, said filter support including an inner retaining member and an outer supporting member coaxial with the inner supporting member, a filter member having its periphery between said members, said inner member having a plurality of air deflecting blades thereon, each blade including a plane portion and a vane portion, the plane portions serving to limit the movement of the filter member, said inner member including a hub portion said plane portions being integral with the hub portion, a flange on said retaining member and disposed in engagement with the collar, a closure having a flange thereon engaging the filter support, means to hold the closure in position, said closure having an outlet aperture therein, a disc member disposed in said aperture, and means to hold the disc member in place, said disc member being spaced from said air deflecting blades, said disc member having perforations therein.

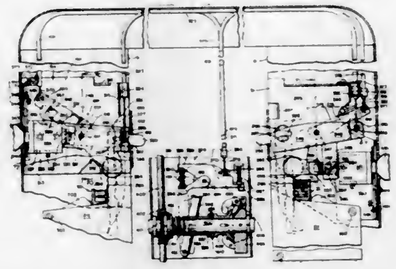
2,450,369
MEANS FOR CONNECTING CORD SPRINGS TO ATTACHMENT PLUG CAPS
Alexander Bellis, Shelton, Conn.
Application May 14, 1947, Serial No. 748,006
5 Claims. (Cl. 173—322)



1. A device of the character described comprising an attachment plug cap including a body member of molded insulating material having a chamber therein and an opening leading to the chamber of smaller diameter so that a shoulder is provided at the inner end of the opening, a coiled spring for embracing a conductor cord as the cord extends through said opening and means for securing the spring to the body member comprising a cupped member provided with an opening in its bottom wall, an insert in the cupped member comprising a ring at the inner side of said wall and legs extending from the ring along the inner sides of the side walls of the cupped member, said cupped member resting at its free edge against the body member with said legs extending through the opening and their free ends folded over the shoulder to secure it in place, and said spring extending through the opening in the cup and ring and held thereby.

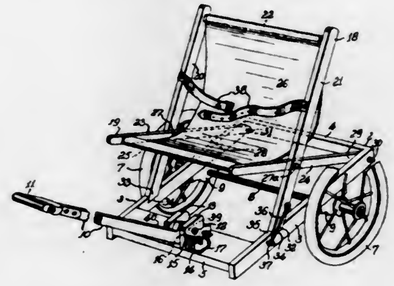
2,450,370
AUTOMOBILE HEAD LAMP CONTROL
James Clive, Ewhurst, Guildford, England
Application March 17, 1947, Serial No. 735,106
In Great Britain April 9, 1946
5 Claims. (Cl. 177—337)

1. A control circuit for the turning indicators and headlamps of automobiles, comprising right and left signal arms each having electromagnetic operating means, right and left headlamps each having electromagnetic means for swivelling its light beam laterally toward the side at which such headlamp is located, a manual switch and contacts therefor adapted to close alternatively the circuits of said electromagnetic operating means of either the right or the left signal arm and also the circuits of the electromagnetic swivelling means of either said right or said left headlamp, means for supplying current to said headlamps, and a second switch with contacts for cutting out of circuit one of said headlamps and for closing simultaneously the circuit of said electromagnetic swivelling means of the other headlamp.



2,450,371
MASONRY SAW
Neligh Clair Coates, Kansas City, Mo.
Application March 24, 1945, Serial No. 584,544
14 Claims. (Cl. 125—13)

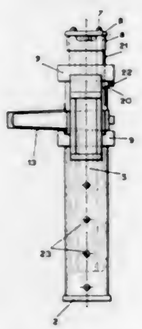
1. A masonry saw comprising a frame having front and rear uprights and a horizontal support therebetween, a workpiece carrier movable longitudinally of the horizontal support, a cutter head pivoted on and vertically adjustable upon the rear uprights, an adjustment bar assembly connecting the cutter head and frame adapted to hold the cutter head rigid in any selected cutting position with respect to the horizontal support and workpiece carrier, said adjustment bar assembly comprising a vertical bar located rearwardly of the rear uprights and hingedly connected at its upper end to the cutter head, a connecting device on the frame loosely encompassing the lower part of said bar whereby said bar moves longitudinally through said device to accommodate adjustment of the cutter head, and means for tightening said device on said bar thereby to hold the cutter head in a selected position.



2,450,372
COINCIDENTAL VEHICLE DOOR LOCKING SYSTEM
Burnie J. Craig, Los Angeles County, Calif.
Application May 3, 1944, Serial No. 533,958
15 Claims. (Cl. 180—82)

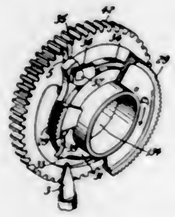
1. A coincidental vehicle door locking system including a plurality of doors, a securing means for holding each of the doors in closed position, coincidental locking means independent of vehicle speed and operable from a location remote from the doors for locking the securing means against opening from without, inside means permitting each door to be opened individually from within independently of the remote coincidental locking means, restoring means, effective when a door is opened from within, while the locking

means is locked to restore the locking means for all the doors to unlocked condition and vehicle speed controlled means for releasing the inside door opening means.



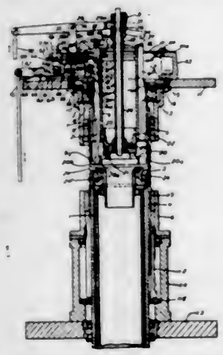
2,450,373
FOLDING GOCART
Heinrich Albert Fiene, Johannesburg, Transvaal, Union of South Africa
Application June 11, 1945, Serial No. 598,783
In the Union of South Africa June 19, 1944
8 Claims. (Cl. 280—36)

1. A folding go cart comprising a cart frame, a pair of wheels attached to the cart-frame, means for seating a child, and a handle for propelling and steering the cart, the seating means being a chair of the folding deck chair pattern formed of two chair frames each comprising two side members and an upper cross-bar, the chair frames being pivoted together between their ends on an axis transverse to the sides, and so that they may be collapsed to occupy materially a single plane and may be extended to exhibit an X-shaped side elevation and said chair also including a seat member of flexible material extending between the upper cross bars of the chair frames, the foot of one of the chair frames being pivotally attached to the cart frame on a horizontal axis, the foot of the second chair frame being free to move relatively to the cart frame to allow the seat frames to collapse from their X position to a position where both are materially in one plane with the cart frame, the length of the flexible seat member being such as to permit such collapse directly from the X position by direct separation of the upper frame cross



bars between which the flexible seat extends, and means for securing said foot of the second chair frame detachably to the cart frame and thereby hold the chair rigidly in its extended position.

2,450,374
TELESCOPIC TUBULAR PROP
Eugène Charles Gillet, Valenciennes, France, assignor to Societe Anonyme des Tubes de Valenciennes & Denain, Paris, France, a corporation of France
Application August 1, 1946, Serial No. 687,681
In France June 8, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 8, 1965
10 Claims. (Cl. 248—354)

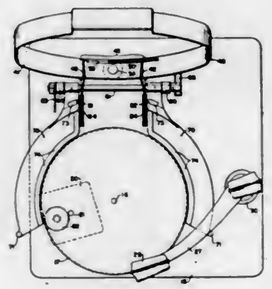


1. A metallic prop comprising in combination: a tubular standard, bearing means at the upper portion of said standard comprising a pair of vertically aligned bores formed in a pair of vertically spaced annular members interconnected by a spacer means, a transversely-expansible tubular plunger slidably mounted in said standard in normally free sliding relationship with said inner bearing means, load-supporting means at the upper end of said plunger and adapted to receive thereon a load to be supported by said structure, and blocking means for expanding said plunger into blocking relationship with said inner bearing means.

2,450,375
FUSE-SETTING APPARATUS
Valentine Pearce Harvey, Deptford, London, England, assignor to Molins Machine Company, Limited, Deptford, London, England
Application July 15, 1944, Serial No. 545,163
In Great Britain August 12, 1943
2 Claims. (Cl. 86—23)

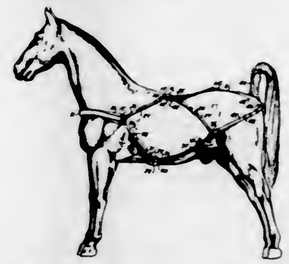
1. A fuze-setter of the kind described having a rotatable fuze-engaging element, a rotatable driving member to rotate the latter, a control member including an adjustable stop to determine the extent to which the rotatable fuze-engaging element is to be moved, a part driven with and rotatable with the rotatable fuze-engaging element, a clutch comprising a movable element mounted on said driven part and arranged to move into engagement with said adjustable stop, said movable element being pivoted on said part so as to be capable of turning on engagement with the adjustable stop, a recess formed in said control-member adjacent said adjustable stop and into which the movable element is caused to move on being so turned, entry of said movable element into said recess locking the movable element to the adjustable stop, a driving pawl mounted for rotation with the movable element and adapted to drive said driven part, said pawl being pivoted so as to be capable of turning with the movable element and disconnecting the drive to said driven part when the movable element is locked to the adjustable stop, a recess in the driving member to receive the driving pawl, said driving member having a surface concentric with the axis of revolution thereof on which, when the movable element enters the first named recess the driving pawl fits so as to prevent said movable element from turning on its pivot thereby holding the movable element in the first named recess and locking the rotatable fuze-engaging element to the adjustable stop, the driving pawl and movable element being so arranged that movement of either into or out of its recess causes the other to move out of or into its recess, as the case may be, and means operable to return the driving pawl into its recess before a fuze-setting operation.

2,450,376
KNITTING MACHINE
Henry Harold Holmes, Leicester, England, assignor to Wildt and Company Limited, Leicester, England, a British company
Application October 9, 1946, Serial No. 702,179
In Great Britain October 19, 1945
22 Claims. (Cl. 66—14)



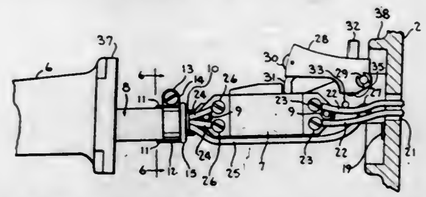
1. In a knitting machine, in combination, needles and terry elements with formations adapted to be presented for co-operation with desired needles suchwise that a terry thread can be drawn over the formations by the said needles to produce long sinker, i. e. terry, loops, said formations being also adapted to provide knocking-over bits for needles which function to concatenate knitted loops in the opposite direction to those concatenated by the needles which also produce terry loops.

2,450,377
STARCH-RESIN REACTION PRODUCT AND METHOD OF PRODUCING THE SAME
Carl C. Kesler, William C. Black, William L. Hicks, and Carlton N. Owen, Cedar Rapids, Iowa, assignors to Penick & Ford, Ltd., Incorporated, Cedar Rapids, Iowa, a corporation of Delaware
No Drawing. Application July 31, 1944, Serial No. 547,510
11 Claims. (Cl. 260—17.3)



1. A method of preparing a reaction product forming a film of increased water resistance, comprising cooking with sufficient water to give the final product a fluidity suitable for application at a temperature of 170–210° F. material selected from the group consisting of starch and low-soluble dextrin, with between 5% and 20% on a starch-weight basis of a water-soluble urea-formaldehyde reaction product, and sufficient acidic material to lower the pH to substantially 4.0, and continuing the heating until the material passes through a range of increased viscosity where it is unsuitable for application and then decreases into a range where it is again suitable for application.

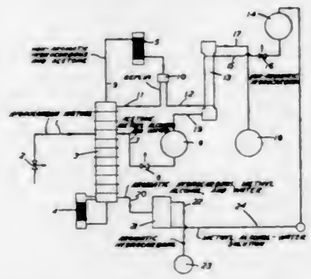
2,450,378
AUTOMATIC PHONOGRAPH
Arthur L. Knox, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application May 10, 1943, Serial No. 486,301
17 Claims. (Cl. 274—10)



1. An automatic phonograph comprising a rotatable turntable for supporting a record, a movable magazine positioned in one plane adjacent said turntable for supporting a stack of records, driving means operatively associated with said magazine for moving it to a first position for receiving a record and to a second position for releasing a record, a movable record support positioned in another plane adjacent said turntable and said magazine, and means connected to said driving means and said record support for moving said record support in timed relation with respect to said magazine whereby, during a record-changing cycle when said magazine is in said second position, said record support may be moved to receive a record from said magazine and transfer it to the turntable, and said record support may be moved to transfer a record from the turntable to said magazine when said magazine is in said first position.

2,450,379
TAIL SET HARNESS
Elmer B. Ogan, Charlotte, N. C.
Application April 23, 1948, Serial No. 22,838
4 Claims. (Cl. 54—1)

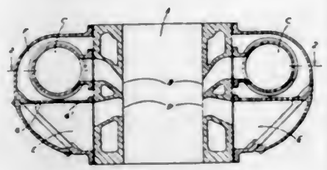
1. Apparatus for supporting a tail elevating device on a horse, said tail elevating device comprising a forked member adapted to rest on the rump of the horse and having an upright portion adapted to fit against the rear surface of the stump of the tail of the horse to support it in elevated position, means for holding the tail elevating device in position on the horse comprising a back pad and a belly pad and a breast pad, a pair of straps connected to the tail elevating device and to the back pad, side straps connected to the rear portion of the tail elevating device on each side thereof and extending forwardly and downwardly and having their forward ends connected to the belly pad, transverse straps connected to the back pad at one end and to a medial portion of the side straps at their other ends on each side of the horse, a pair of straps having one of their ends secured to the belly pad and the back pad respectively and having their forward ends secured to the ends of the breast pad on each side thereof, all of the said straps being adjustable as to overall length to thereby cause a major portion of the force required to hold the tail elevating device in position to be borne by the breast strap.



2,450,380
SWITCH HANDLE FOR PORTABLE ELECTRIC TOOLS
James Albert Perham, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a corporation of Delaware
Application March 27, 1947, Serial No. 737,701
9 Claims. (Cl. 172—36)

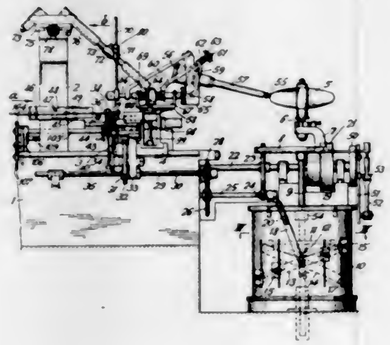
1. A handle assembly of the character described for portable electrically actuated tools comprising, telescopically fitting parts, an inner part in the form of a bracket member and an outer part in the form of an outer handle member, a switch unit and an actuator therefor and a cable clamp mounted on and supported by said bracket, said switch unit having terminals on the outer side thereof, an electric supply cable se-

cured to said bracket by said clamp, said cable having leads connectible to certain of said terminals, said outer handle member being hollow to enclose the bracket and the switch unit and the cable clamp thereon and having an opening to receive the actuator when the handle members are assembled, and means whereby said handle members may be secured to a tool case.



2,450,381
TREATMENT BY AZEOTROPIC DISTILLATION OF COMPLEX MIXTURES
Sydney Jamieson Ralph and George Anthony Dummett, Point Pleasant, Wandsworth, London, England, assignors to The Aluminium Plant & Vessel Company Limited, London, England, a British company
Application March 28, 1944, Serial No. 528,432
In Great Britain March 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 19, 1963
5 Claims. (Cl. 202—42)

3. A distillation treatment of complex mixtures of mutually soluble liquids inseparable or separable only with difficulty by simple distillation, comprising continuously distilling a mixed hydrocarbon fraction containing about 15% to 25% of aromatic hydrocarbons and 85% to 75% of paraffinoids with a true boiling point of 90° to 118° C. in a distillation column with an aqueous solution containing 40 to 50% of acetone and 1% to 8% of methyl alcohol under a reflux ratio of 0.8 to 2.0 to 1 with a temperature slightly above the boiling point of acetone at the top of the column and a temperature of 93°/95° C. in the heating section of the column so that the acetone from the mixture is continuously removed in the top product with the paraffinoid components while the remaining components are removed in the effluent from the base of the column.



2,450,382
INTERNAL-COMBUSTION ENGINE
Harry Ralph Ricardo, London, England
Application August 13, 1947, Serial No. 768,340
In Great Britain August 28, 1946
3 Claims. (Cl. 123—52)

1. An internal combustion engine comprising in combination a cylinder, at least one passage through which flow the exhaust gases from the cylinder, at least one passage through which air for combustion enters the cylinder this air serving to supercharge the cylinder and being at a pressure in excess of the pressure mean of the exhaust gases after they leave the cylinder, a compartment through which is carried the said exhaust gas passage the said compartment providing a jacket space around the exhaust gas passage, a partition wall separating this compartment jacket space from the said passage through which air flows to the cylinder, and at

least one opening in the partition wall through which air at the pressure at which it is delivered to the cylinder can flow into the said jacket space.

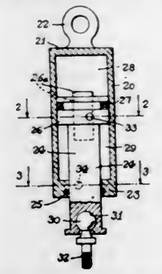
2,450,383
METHOD AND MACHINE FOR PRODUCING PROPELLERS, SHIPS' SCREWS, AND THE LIKE
Werner Risch, Zurich, Switzerland
Application March 4, 1946, Serial No. 651,768
In Switzerland November 14, 1945
16 Claims. (Cl. 51—100)

1. In a propeller milling and grinding machine, a pattern carrier, a tool carrier, mounted for radial relative movement with respect to a work piece, a tool carried by said tool carrier, a movable tracer adapted to tap off a pattern carried by said pattern carrier, said tracer mounted for axial and radial movement with respect to said pattern carrier, driving mechanism for the radial movement of the tracer, driving mechanism for the radial movement of the tool, means for coupling said two driving mechanisms with variable translation, means for axially moving the tool, a system of movement transmitting elements between the tracer and the tool for transmitting the axial movement of the tracer with variable translation to the tool, a propeller blank carrier, means for imparting a to-and-fro movement to the pattern carrier, means for imparting a to-and-fro movement to the propeller blank carrier, and coupling means between the drive for the pattern carrier and the drive for the propeller blank carrier for moving the two carriers at the same rhythm but with mutually variable stroke.

2,450,384
MANUFACTURE OF FACTICE AND SULFURIZED OILS
Kenneth Charles Roberts, Clayton, England, assignor to The Anchor Chemical Company Limited, Manchester, Lancashire, England, a British company
No Drawing. Application February 6, 1946, Serial No. 645,972. In Great Britain February 13, 1945
6 Claims. (260—402.5)

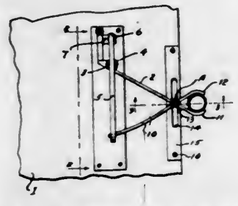
1. A method of manufacturing factice, comprising reacting sulphur with a fatty oil at a temperature between 130° and 180° C., in the presence of from ½ to 10% by weight of dicyclohexylamine.

2,450,385
PLASTERER'S FEATHEREDGE DEVICE
Albert J. Schumock, Washington, D. C.
Application October 15, 1946, Serial No. 703,359
1 Claim. (Cl. 72—136)



A plasterer's featheredge comprising a relatively wide, flat wooden board having approximately straight longitudinal edges, one of said edges having a longitudinal recess therein and a metal blade detachably secured in said recess and projecting outwardly therefrom, and molding strips secured to the board in corresponding locations upon opposite sides of the board parallel to and adjacently spaced from the other of said edges of the board, said molding strips and adjacent edge being rounded in transverse cross-sectional contour and the curved surfaces lying within and together defining the outline of an oval, whereby the molding strips and adjacent longitudinal edge of the board provide a comfortable and effective hand grip with the molding strips serving to strengthen and maintain the board against warping in the direction of its length.

2,450,386
MANUFACTURE OF COMPOUNDS CONTAINING AMIDINE GROUPS
Wallace Frank Short and Maurice William Partridge, Nottingham, England, assignors to Boots Pure Drug Company Limited, Nottingham, England, a company of Great Britain
No Drawing. Application August 23, 1946, Serial No. 692,700. In Great Britain September 4, 1945
4 Claims. (Cl. 260—564)



1. In a process for the manufacture of compounds containing amidine groups by reacting a nitrile of the general formula R.CN, where R is a member of the group consisting of alkyl, aryl, and aralkyl radicals and heterocyclic radicals in which the hetero atoms are nitrogen atoms and the unsatisfied valency bond is on a carbon atom, with a compound selected from the group consisting of urea, ammonia, and mono-functional primary and secondary amines of the aliphatic, araliphatic, and aromatic series and of the heterocyclic series in which the hetero atoms are nitrogen atoms, the step which consists in promoting the reaction by the use of a substance selected from the group consisting of aluminum chloride, zinc chloride, ferric chloride, and stannic chloride.

2,450,387
PNEUMATIC SHOCK ABSORBER
Peter Warborn Thornhill, Leamington Spa, England, assignor to The Ribbesford Company Limited, Leamington Spa, England
Application May 8, 1946, Serial No. 668,285
In Great Britain June 15, 1945
9 Claims. (Cl. 188—88)

1. A shock absorber of the fluid pressure piston and cylinder type, comprising a pair of relatively reciprocating elements, namely, a cylinder and piston, a pair of attachment devices for said elements, a swivel connection in one of the attachment devices permitting the corresponding element to rotate about its axis relative to the other element, and rotating means for producing from the relative reciprocation of the elements rotation of that element having the swivel connection, said rotating means comprising a housing in one element, a rotary pad member mounted in said housing, and resilient means urging the rotary pad member radially into frictional engagement with a cylindrical surface of the other element, the said cylindrical surface being engaged by a part of the rotary pad member displaced from the axis of said pad member, so that as the elements move telescopically, the rotary pad member tends to roll along a helical path on the said cylindrical surface and causes rotation of one of the elements relative to the other, about its axis.

2,450,388
CLAMP FOR PLACING WELL CASINGS
Aubrey Trotter, Lafayette, La.
Application October 1, 1946, Serial No. 700,441
2 Claims. (Cl. 24—249)

2. A clamp for placing well casings, a slotted base member adapted to be secured to a derrick platform, a pivot slidable in the slot, an arm secured to the pivot and having an integral pipe-engaging jaw, an anchoring plate to which the arm is connected, a movable arm oscillatable on the pivot and having a jaw cooperating with the

first mentioned jaw, a latch extending transversely of the arms near their ends, means for pivotally mounting the latch on the anchoring plate whereby one end of the latch extends beyond the pivot, a spring interposed between the extended end of the latch and the anchoring plate for holding the latch normally operative, the said latch having a lug engaging the movable arm and operative to hold the clamp in closed position, the said clamp being operative by foot pressure to force the latch in engagement with the movable arm and also operative by foot pressure on the end of the latch to release the latch from the arm.

2,450,389

MANUFACTURE OF CROTONIC ACID

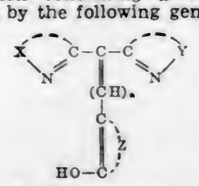
Karl Heinrich Walter Tuerck, Banstead, England, assignor to The Distillers Company Limited, Edinburgh, Scotland, a British company

No Drawing. Application December 9, 1944, Serial No. 567,526. In Great Britain December 2, 1943

5 Claims. (Cl. 260—530)

1. A continuous process for the manufacture of crotonic acid by the oxidation of crotonaldehyde by means of molecular oxygen characterised in that the concentration of crotonaldehyde in the liquid reaction mixture consisting of crotonaldehyde and its oxidation products is maintained above 50% by weight thereof and an oxygen-containing gas containing a proportion of oxygen greater than that of air is continuously introduced into said reaction mixture in intimate admixture therewith.

2,450,390



PHOTOGRAPHIC EMULSIONS CONTAINING TRINUCLEAR IMINOL CYANINE DYES

Alfred W. Anish, Vestal, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

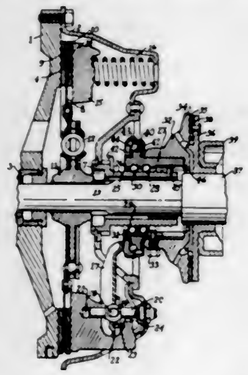
No Drawing. Original application January 19, 1945, Serial No. 573,631. Divided and this application March 14, 1945, Serial No. 582,819

4 Claims. (Cl. 95—7)

1. A photographic light-sensitive element which comprises a support and a gelatino silver-halide emulsion containing a sensitizing dye characterized by the following general formula:

wherein X and Y represent the atoms necessary to complete a nitrogenous heterocyclic ring system, Z represents the atoms necessary to complete a member selected from the class consisting of a five-membered and six-membered heterocyclic ring system and n represents a positive odd integer of from one to five.

2,450,391



CLUTCH OPERATING MECHANISM

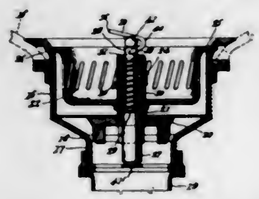
William B. Barnes, Muncie, Ind., assignor to Barnes Motor Developments Company, Muncie, Ind., a partnership consisting of William B. Barnes and Freda Arthur Barnes

Application February 19, 1945, Serial No. 578,601

6 Claims. (Cl. 192—35)

1. A clutch operating means for friction clutches which clutches include means for biasing the clutch members into an engaged position and means for moving said members into disengaged position, said operating means comprising a normally rotating screw member, a nut member normally free to rotate with said rotating screw member and axially movable on said screw member when relative rotation is effected between said members, brake means for holding said nut member against rotating at the same speed as the screw member to cause said nut member to advance and move said clutch

members into disengaged position and axially movable with said nut member, one of said nut and screw members having a helical channel in the periphery thereof and having a peripheral race-way connecting the ends of the helix and the other of said nut and screw members having a multiplicity of screw channels therein, said friction reducing balls mounted in said channels whereby said nut member may rotate on said screw member under the bias of said clutch biasing means when said brake means is released.



2,450,392

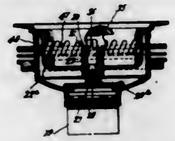
SINK STRAINER VALVE AND OPERATING MECHANISM THEREFOR

Patrick F. Donahue, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut

Application July 19, 1944, Serial No. 545,689

15 Claims. (Cl. 4—287)

1. An operating mechanism for opening and closing a sink strainer plug with reference to its seat comprising a thrust member on which said plug is slidable, yieldable means between said thrust member and plug reacting against said thrust member for normally elevating the plug from its seat, and means carried by said thrust member in position to engage said plug for pushing the plug home against its seat.



2,450,393

SINK STRAINER VALVE AND OPERATING MECHANISM THEREFOR

Patrick F. Donahue, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut

Application October 25, 1945, Serial No. 624,387

6 Claims. (Cl. 4—287)

1. For use with a sink drain bowl or the like having a drain outlet, a basket strainer in the bowl, a plug below the strainer to close and open the drain outlet, fixed and movable cooperating guides for the strainer and plug respectively, an operating member for the plug, said member pivoted to the guide member and comprising a formed shell of U-shape in cross-section providing substantially parallel side walls with a connecting wall of general arcuate form in longitudinal section, the distal edges of said walls forming cam surfaces coacting with the fixed guide for moving the plug relative to the basket strainer, and the edge of said connecting wall removed from the pivot axis of said operating member being of a shape complemental to the shape of the fixed guide and adapted to snugly fit thereagainst when the operating member is in plug-open position.

2,450,394

PREPARATION OF SPHEROIDAL CATALYSTS

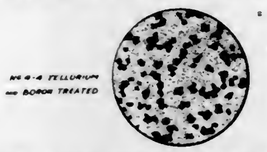
Henry Trueheart Brown, Whiting, Ind., and Rodney V. Shankland, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application July 31, 1943, Serial No. 496,844

9 Claims. (Cl. 252—259.2)

1. The process of making spheroidal solid contact catalysts of high physical strength which comprises forming into droplets a stable inorganic oxide sol in a first liquid supporting medium immiscible with said sol and containing a coagulating agent therefor, regulating the composition of said sol to produce droplets in spheroidal form in said supporting medium, maintaining said droplets in suspension in said medium for sufficient time to effect partial gelation of said sol and confer sufficient mechanical strength on said droplets to prevent rupture in subsequent handling, and finally completing the gelation of said droplets by passing them into a second liquid supporting medium immiscible with said first liquid medium and in contact therewith comprising an aqueous liquid containing a coagulating agent for said sol, and thereafter removing the resulting gel particles from said aqueous liquid and drying them without coalescence.

2,450,395



MALLEABLE CAST IRON

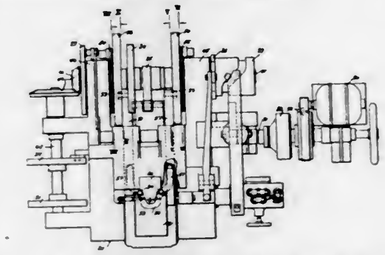
Harry A. Eckman and Henry W. Maack, Chicago, Ill., assignors to Crane Co., Chicago, Ill., a corporation of Illinois

Application August 2, 1944, Serial No. 547,754

5 Claims. (Cl. 75—123)

3. An annealable white iron casting of relatively heavy section and substantially free from primary graphite, containing at least 2.25% carbon, at least .60% silicon, at least .30% manganese and small amounts of carbide forming elements tellurium and boron to prevent separation of free graphite during solidification, said amounts being .001 to .02% tellurium and .001 to .015% boron, and the relative amounts of

tellurium and boron proportioned so that the accelerating effect of the boron in decomposition of carbides during annealing offsets the retarding effect of tellurium in the graphitization of malleable iron.



2,450,396

CHAIN FORMING MACHINE

Lowell B. Gilbert, Kenmore, and Raymond J. Kieffer, Tonawanda, N. Y., assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y., a corporation of New York

Application January 10, 1945, Serial No. 572,168

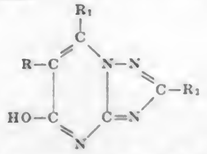
24 Claims. (Cl. 59—27)

1. In a chain forming machine, the combination with the forming slides and follower means carried by each slide, of a forming cam associated with each of the follower means for operating the slides, each of the cams having an irregular groove and a cylindrical groove for cooperation with the associated follower means, each cam having a movable portion for directing the follower means through either of said grooves, a shifter plate slidably carried by the cam and movable with the movable portion thereof, a shifter roller carried by said shifter plate, a track plate carried by the machine and arranged adjacent the cam, a shifter track carried by said track plate, connecting means carried by said cam portion for cooperation with either the inside or outside surfaces of said track, and means carried by said track plate for guiding said connecting means to the inside or outside surfaces of said track.

2,450,397

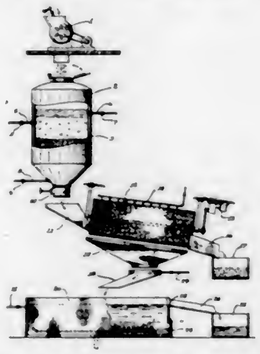
5-HYDROXY - 1,3,4 - TRIAZAINDOLIZINES AS STABILIZERS FOR PHOTOGRAPHIC SILVER-HALIDE EMULSIONS

Newton Heimbach, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware



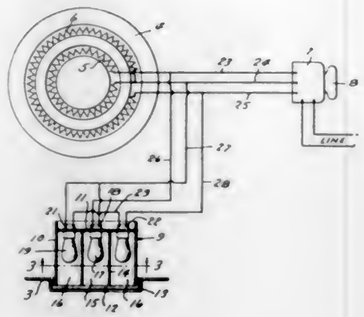
Application October 22, 1946, Serial No. 704,932

12 Claims. (Cl. 95—7)



1. A photographic material comprising a base and a light-sensitive silver-halide emulsion car-

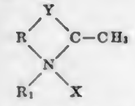
ried thereby, said photographic material containing, in fog inhibiting amount, a compound of the general formula:



wherein R is a member selected from the class consisting of hydrogen and carbalkoxy groups, R_1 is a member selected from the class consisting of hydrogen, methyl and phenyl groups, and R_2 is a member selected from the class consisting of hydrogen, alkyl, aryl, carboxy, and carbalkoxy groups.

2,450,398
FLOTATION OF BONE PARTICLES
Marion D. Sanders, Washington, D. C., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
Application April 3, 1944, Serial No. 529,381
5 Claims. (Cl. 209—155)

1. In a method of classifying bone scrap material rich in calcium phosphate and having protein, fat, and other matter mixed therewith wherein the components rich in calcium phosphate are separated from the protein, fat, and other matter by crushing the said bone scrap to a particle size approximately 2 inches in diameter prior to rendering, thereafter separating the fat, glue liquor, and coarse bone scrap from the rendered crushed bone scrap fines, and subjecting the said fines to a hydraulic classifying process to recover a substantial quantity of the material rich in calcium phosphate, the improvement which comprises: submerging the said fines containing components rich in calcium phosphate and protein matter having a specific gravity greater than water in an elongated, relatively narrower, classifying zone containing a liquid aqueous medium; maintaining the entire contents of the classifying zone in a state of continuous, vigorous agitation by introducing therein air under high pressure, the major portion of the said protein matter being suspended in the upper portion of the classifying zone without suspending in the said upper zone more than a minor proportion of the components rich in calcium phosphate; decanting the suspended protein matter from the upper portion of the classifying zone; and collecting the components rich in calcium phosphate remaining in the lower portion of the classifying zone.

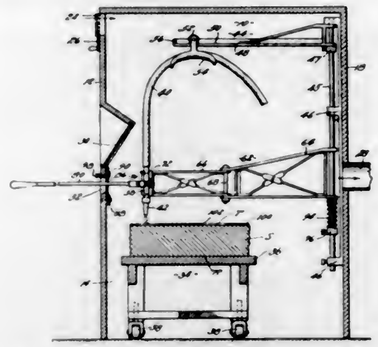


2,450,399
INDICATOR FOR ELECTRIC RANGES
Robert G. Sheidler, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a corporation of Ohio
Application January 9, 1948, Serial No. 1,350
4 Claims. (Cl. 219—37)

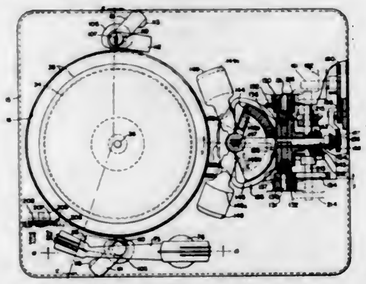
3. In an electric range having a plurality of heating elements each of which comprises a plurality of concentric heating coils and means for selectively energizing said coils, the combination with each of said heating elements of an indicator mounted independently of said heating element for visibly indicating the condition of the heating coils therein, each of said indicators being designed to simulate a heating element and comprising a plurality of concentric compartments corresponding to the plurality of heating coils in the heating element associated therewith, a signal lamp in each of said compartments, and an electrical conductor between each of said lamps and a corresponding heating coil.

2,450,400
PROCESS FOR PRODUCING DYE INTERMEDIATES
Thomas Robert Thompson, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application January 26, 1944, Serial No. 519,811
17 Claims. (Cl. 260—298)

1. The process which comprises reacting a quaternary ammonium salt in which the heterocyclic nitrogenous ring contains only 5 atoms and having the formula



with a compound selected from the group consisting of thio acids having the grouping

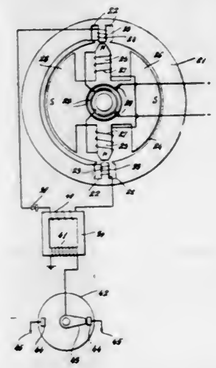


and salts of said acids, where Y in the above formula is selected from the group consisting of sulfur and selenium, R is selected from the group consisting of vinylene, phenylene and naphthylene, R_1 is selected from the group consisting of alkyl, aryl and aralkyl, and X is an acid radical.

2,450,401
APPARATUS FOR ENGRAVING TOMBSTONES AND THE LIKE
William H. Thompson, Wilson, Kans.
Application October 7, 1944, Serial No. 557,695
3 Claims. (Cl. 51—8)

1. An apparatus of the class described comprising a compartment, a sand blast hose supported on a horizontally swingable crane and having a depending vertically disposed nozzle vertically carried by a horizontally swingable support whereby to direct a vertical stream of sand therefrom, means extending through the wall of said compartment whereby the position of said nozzle is controlled from outside the compartment, and means for supporting an article having a surface to be sand blasted in a horizontal position substantially parallel with the planar movement of said nozzle.

2,450,402
TURNOVER RECORD CHANGER
Jerald D. Weaver, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application May 15, 1942, Serial No. 443,048
10 Claims. (Cl. 274—10)

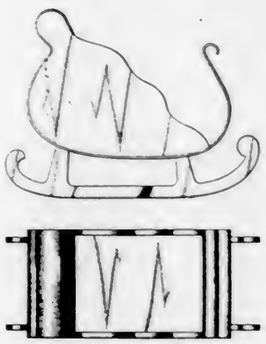


1. An automatic phonograph comprising a rotatable turntable for supporting a stack of records, a pair of movable members positioned beyond the periphery of said turntable and being movable in first and second planes, record-engaging means on each of said movable members for engaging the top record on said turntable adjacent the peripheral edge of said record when said members are moved in said first plane and for raising said record a limited distance from said turntable when said members are moved in said second plane and means operatively associated with said movable members and movable under the raised record for elevating it from said record-engaging means.

2,450,403
PROCESS OF MAKING SULFURIZED JOJOBA OIL
Franklin B. Wells, Verona, N. J., assignor to Ellis-Foster Company, a corporation of New Jersey
No Drawing. Application September 21, 1944, Serial No. 555,195
1 Claim. (Cl. 260—399)

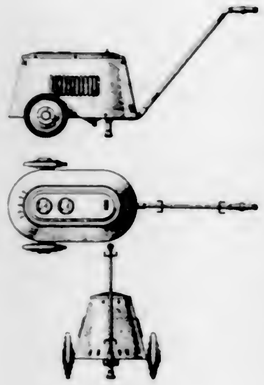
The process of making a liquid highly sulfurized jojoba bean oil containing up to about 31% combined sulfur, which comprises heating jojoba bean oil and adding sulfur portionwise thereto on the up-heat between 250° F. and 400° F., whereby the reaction product when cold is a solid when formed with large amounts of sulfur, and thereafter continuing the heating at between 350° F. and 400° F. for up to about 20 minutes until the reaction product when cold is liquid.

2,450,404
IGNITION SYSTEM
Donald I. Bohn, Pittsburgh, Pa.
Application August 4, 1945, Serial No. 608,881
8 Claims. (Cl. 315—218)



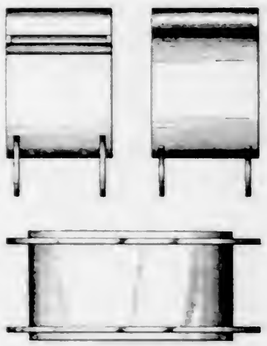
1. In an internal combustion engine ignition system, the combination of an impulse generator driven by the engine in timed relation and having armature and field pole structures adapted to produce solely through relative rotation therebetween a potential output consisting of full wave, steep front voltage impulses of the same starting polarity in synchronism with the firing periods of the engine, with a period of substantially zero potential generation between successive impulses, a step-up transformer having its primary connected to the output terminals of said generator and a load circuit connected to the secondary of said transformer and including spark gap means for said engine periodically energized by said impulses.

DESIGNS



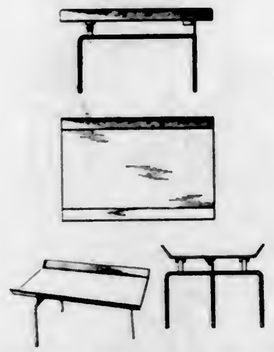
SEPTEMBER 28, 1948

151,116
DESIGN FOR A TABLE ORNAMENT
Charles W. Biener, Yakima, Wash.
Application October 4, 1946, Serial No. 133,769
Term of patent 7 years
(Cl. D29—23)



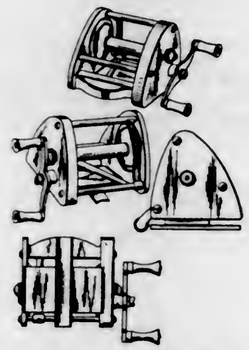
The ornamental design for a table ornament, as shown.

151,117
DESIGN FOR A BATTERY CHARGING MACHINE OR SIMILAR ARTICLE
Albert C. Blevins, Dallas, Tex., assignor to Comet Battery Charger Company, Ltd., Dallas, Tex.
Application July 21, 1947, Serial No. 140,413
Term of patent 7 years
(Cl. D26—5)



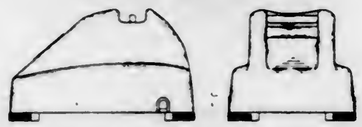
The ornamental design for a battery charging machine or similar article, as shown.

151,118
DESIGN FOR A TRAVELING LAWN SPRINKLER
Birger J. Borgerson, Chicago, Ill.
Application January 17, 1947, Serial No. 136,194
Term of patent 7 years
(Cl. D91—1)



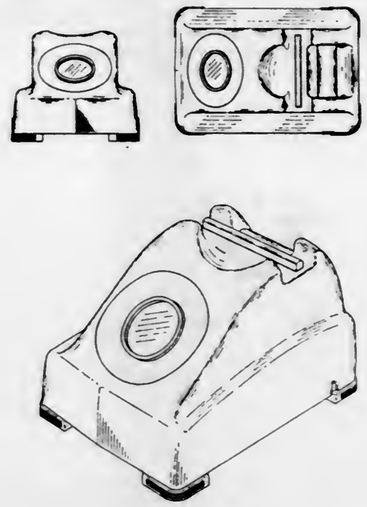
The ornamental design for a traveling lawn sprinkler, substantially as shown.

151,119
DESIGN FOR A TABLE
Charles Eames, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application March 27, 1947, Serial No. 137,935
Term of patent 14 years
(Cl. D33—14)



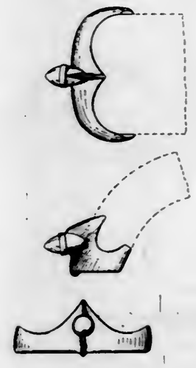
The ornamental design for a table, as shown.

151,120
DESIGN FOR A FISHING REEL
Louis S. Elsinger, Tampa, Fla.
Application December 3, 1945, Serial No. 124,295
Term of patent 3½ years
(Cl. D31—4)



The ornamental design for a fishing reel, as shown.

151,121
DESIGN FOR A TELEPHONE DESK UNIT
Clifford E. Erickson, Chicago, Ill., assignor to Kellogg Switchboard & Supply Company, Chicago, Ill., a corporation of Illinois
Application April 19, 1946, Serial No. 128,801
Term of patent 14 years
(Cl. D26—14)



151,121—Continued

The ornamental design for a telephone desk unit, substantially as shown.

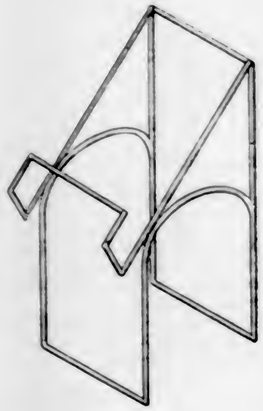
151,122
DESIGN FOR A COMBINED TAIL LIGHT AND END PIECE FOR MOTORCYCLE FENDERS
Harry Firth, Toronto, Ontario, Canada
Application February 14, 1947, Serial No. 136,907
Term of patent 3½ years
(Cl. D90—1)

The ornamental design for a combined tail light and end piece for motorcycle fenders, as shown.

151,123
DESIGN FOR A NEGLIGEE
Violet Giovagnoni, New York, N. Y.
Substituted for abandoned application Serial No. D. 136,110, January 13, 1947. This application January 13, 1948, Serial No. 143,714
Term of patent 3½ years
(Cl. D3—26)

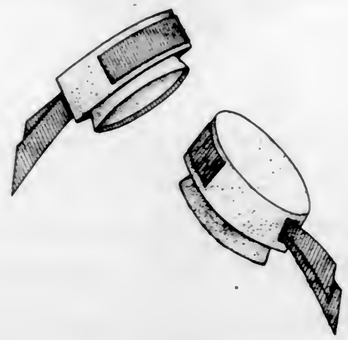
The ornamental design for a negligee, substantially as shown and described.

151,124
DESIGN FOR A LOLLIPOP
George Goodes, Jersey City, N. J.
Application October 9, 1947, Serial No. 141,815
Term of patent 3½ years
(Cl. D82—2)



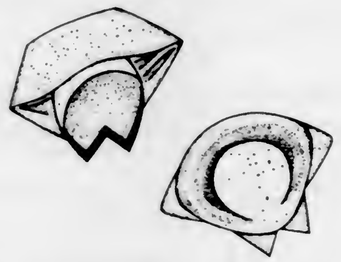
The ornamental design for a lollipop, as shown.

151,125
DESIGN FOR A PERFUME BOTTLE
Eli Gordon and Henry Sanders, Los Angeles, Calif.
Application June 29, 1946, Serial No. 131,171
Term of patent 7 years
(Cl. D58—9)



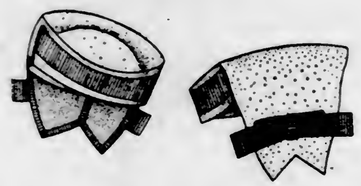
The ornamental design for a perfume bottle, as shown.

151,126
DESIGN FOR A SUPPORT FOR A SOAP TRAY OR THE LIKE
Ferdinand A. Hilenski, Salem, Mass.
Application October 25, 1946, Serial No. 134,261
Term of patent 3½ years
(Cl. D4—3)



The ornamental design for a support for a soap tray or the like, as shown.

151,127
DESIGN FOR A HAT
G. Howard Hodge, New York, N. Y.
Application June 17, 1947, Serial No. 139,759
Term of patent 3½ years
(Cl. D3—13)

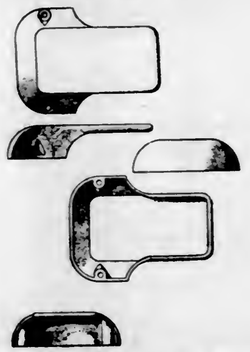


The ornamental design for a hat, substantially as shown.

151,128
DESIGN FOR A HAT
G. Howard Hodge, New York, N. Y.
Application June 17, 1947, Serial No. 139,760
Term of patent 3½ years
(Cl. D3—13)

The ornamental design for a hat, substantially as shown.

151,129
DESIGN FOR A HAT
G. Howard Hodge, New York, N. Y.
Application June 17, 1947, Serial No. 139,762
Term of patent 3½ years
(Cl. D3—13)



The ornamental design for a hat, substantially as shown.

151,130
DESIGN FOR AN EAR CLIP FINDING
Karl F. Hoeckele, Newark, N. J., assignor to Eastern Jewelry Finding Works, Inc., a corporation of New Jersey
Application January 30, 1948, Serial No. 144,147
Term of patent 7 years
(Cl. D45—1)

The ornamental design for an ear clip finding, substantially as shown.

151,131
DESIGN FOR A DOOR PULL
Lewis L. Kadleck, Fort Worth, Tex.
Application December 16, 1946, Serial No. 135,541
Term of patent 3½ years
(Cl. D10—8)

The ornamental design for a door pull, as shown.

151,132
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,776
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

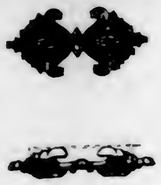
151,133
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,778
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,134
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,784
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,135
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,803
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

151,136
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,804
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,137
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,932
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,138
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,934
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,139
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,938
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,140
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,967
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,141
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 30, 1948, Serial No. 144,173
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,142
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,256
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,143
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,258
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,144
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,260
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,145
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,262
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

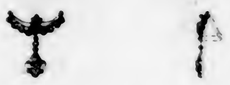
151,146
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,264
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,147
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application February 19, 1948, Serial No. 144,611
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,148
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application February 19, 1948, Serial No. 144,612
Term of patent 7 years
(Cl. D45—9)

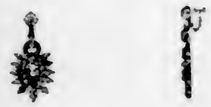


The ornamental design for an earring or similar article, substantially as shown.

151,149
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 27, 1948, Serial No. 144,785
Term of patent 7 years
(Cl. D45—19)

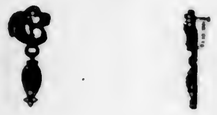
The ornamental design for a brooch or similar article, substantially as shown.

151,150
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 27, 1948, Serial No. 144,786
Term of patent 7 years
(Cl. D45—9)



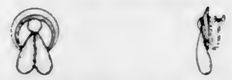
The ornamental design for an earring or similar article, substantially as shown.

151,151
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application March 13, 1948, Serial No. 145,074
Term of patent 7 years
(Cl. D45—19)



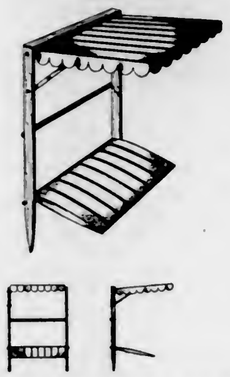
The ornamental design for a separable brooch or similar article, substantially as shown.

151,152
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application March 17, 1948, Serial No. 145,169
Term of patent 7 years
(Cl. D45—9)



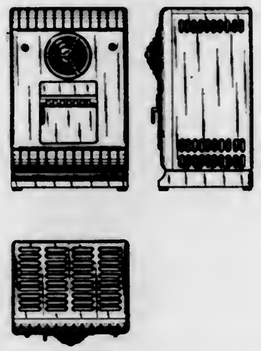
The ornamental design for an earring or similar article, substantially as shown.

151,153
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application March 17, 1948, Serial No. 145,170
Term of patent 7 years
(Cl. D45—9)



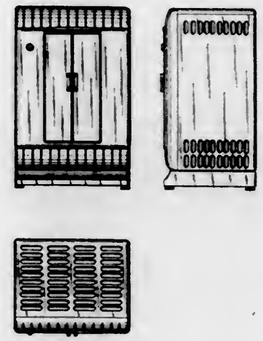
The ornamental design for an earring or similar article, substantially as shown.

151,154
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application March 17, 1948, Serial No. 145,173
Term of patent 7 years
(Cl. D45—9)



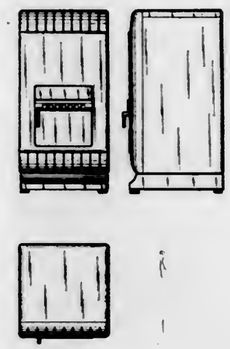
The ornamental design for an earring or similar article, substantially as shown.

151,155
DESIGN FOR A SUN-BATHING AWNING
Olaf D. Koski, Seattle, Wash.
Application October 4, 1946, Serial No. 133,767
Term of patent 14 years
(Cl. D88—3)



The ornamental design for a sun-bathing awning, as shown.

151,156
DESIGN FOR A HEATER
Ralph E. Kruck, Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application September 24, 1947, Serial No. 141,566
Term of patent 14 years
(Cl. D81—19)



The ornamental design for a heater, as shown and described.

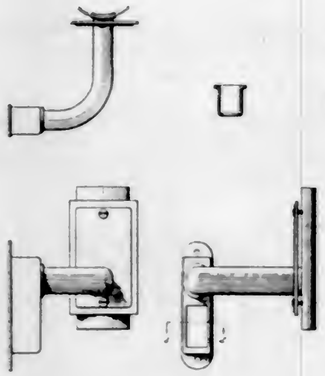
151,157
DESIGN FOR A HEATER
Ralph E. Kruck, Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application September 24, 1947, Serial No. 141,567
Term of patent 14 years
(Cl. D81—19)

The ornamental design for a heater, as shown and described.

151,158
DESIGN FOR A HEATER
Ralph E. Kruck, Clinton, Conn., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application September 24, 1947, Serial No. 141,568
Term of patent 14 years
(Cl. D81—19)

The ornamental design for a heater, as shown and described.

151,159
DESIGN FOR A NEGLIGEE
Alice Macksoud, New York, N. Y.
Application January 20, 1948, Serial No. 143,895
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a negligee, substantially as shown.

151,160
DESIGN FOR A FRUIT HOLDER
Milo J. Manca, Seattle, Wash.
Application June 6, 1946, Serial No. 130,469
Term of patent 7 years
(Cl. D44—29)

The ornamental design for a fruit holder, substantially as shown.

151,161
DESIGN FOR A MOUNTING BRACKET FOR AN ELECTRICAL FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application November 29, 1946, Serial No. 135,153
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a mounting bracket for an electrical fixture, substantially as shown.

151,162
DESIGN FOR A TABLE
Jerome L. Metz, Chicago, Ill., assignor to J. L. Metz Furniture Company, Hammond, Ind., a corporation of Illinois
Application April 17, 1947, Serial No. 138,454
Term of patent 7 years
(Cl. D33—14)

The ornamental design for a table, as shown.

151,163
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Oreste Pennino, New York, N. Y.
Application January 13, 1948, Serial No. 143,707
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,164
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,901
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,165
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,902
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,166
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,903
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,167
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,904
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,168
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,906
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,169
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,907
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,170
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,908
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,171
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,909
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,172
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,911
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,173
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,912
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,174
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 20, 1948, Serial No. 143,913
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,175
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,051
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,176
DESIGN FOR A CLIP OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,056
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a clip or similar article, substantially as shown.

151,177
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,057
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,178
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,058
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

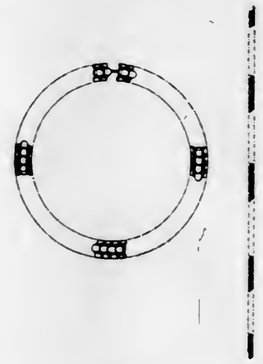
151,179
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 30, 1948, Serial No. 144,145
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,180
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 30, 1948, Serial No. 144,146
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,181
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 4, 1948, Serial No. 144,271
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

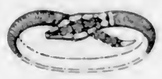
151,182
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 14, 1948, Serial No. 144,491
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,183
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 19, 1948, Serial No. 144,618
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,184
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1948, Serial No. 144,823
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

151,185
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1948, Serial No. 144,824
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,186
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 28, 1948, Serial No. 144,825
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, as shown and described.

151,187
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 13, 1948, Serial No. 145,075
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

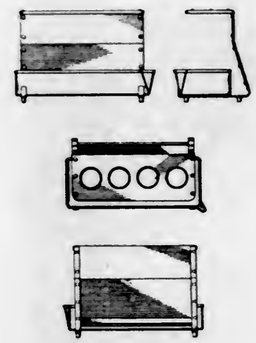
151,188
DESIGN FOR A STOOL OR SIMILAR ARTICLE
Edward V. Price and Veronica E. Price, Van Nuys, Calif.
Application June 19, 1946, Serial No. 130,862
Term of patent 14 years
(Cl. D15—8)

The ornamental design for a stool or similar article, substantially as shown and described.

151,189
DESIGN FOR A COMBINED STAND, ELECTRIC HEATER AND FAN
John T. Rausch and George Towne, Danville, Ill.
Application November 2, 1946, Serial No. 134,478
Term of patent 14 years
(Cl. D81—10)

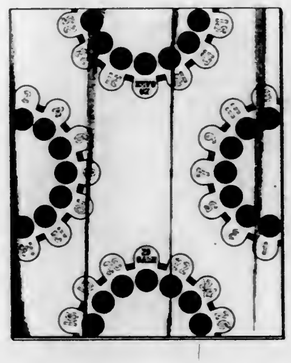
The ornamental design for a combined stand, electric heater and fan as shown and described.

151,190
DESIGN FOR A COAT
George Reiter, New York, N. Y.
Application December 1, 1947, Serial No. 142,897
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a coat, substantially as shown.

151,191
DESIGN FOR A SUIT
George Reiter, New York, N. Y.
Application December 1, 1947, Serial No. 142,898
Term of patent 3½ years
(Cl. D3—4)

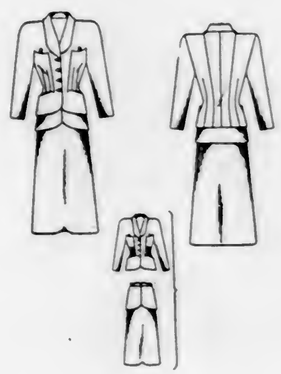


The ornamental design for a suit, substantially as shown.

151,192
DESIGN FOR A BOTTLE DRAINER
Harry Roe, Kansas City, Mo.
Application March 10, 1947, Serial No. 137,494
Term of patent 14 years
(Cl. D91—1)

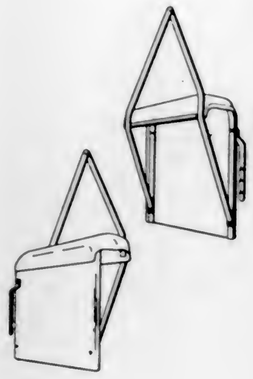
The ornamental design for a bottle drainer, as shown.

151,193
DESIGN FOR A GAME BOARD
John Scarne, Fairview, N. J.
Application July 29, 1946, Serial No. 132,080
Term of patent 14 years
(Cl. D34—5)



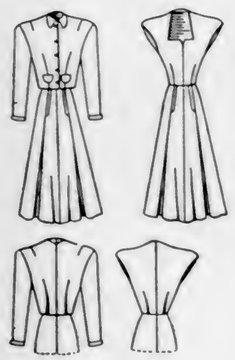
The ornamental design for a game board, as shown.

151,194
DESIGN FOR A SUIT
Benjamin Schultz, New York, N. Y.
Application December 1, 1947, Serial No. 142,900
Term of patent 3½ years
(Cl. D3—4)



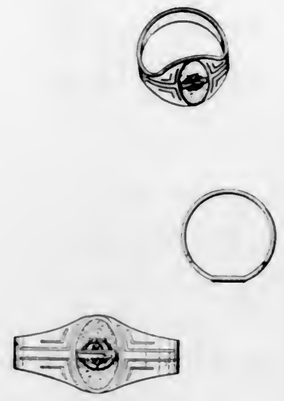
The ornamental design for a suit, substantially as shown.

151,195
DESIGN FOR A SUIT
Benjamin Schultz, New York, N. Y.
Application December 1, 1947, Serial No. 142,901
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a suit, substantially as shown.

151,196
DESIGN FOR A SWING END FRAME
William I. Smith, Perrysburg, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application August 14, 1946, Serial No. 132,521
Term of patent 14 years
(Cl. D15—11)



The ornamental design for a swing end frame, as shown.

151,197
DESIGN FOR A DRESS ENSEMBLE
John F. Strassner, New York, N. Y.
Application December 18, 1947, Serial No. 143,225
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress ensemble, substantially as shown and described.

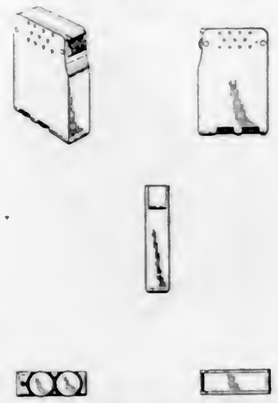
151,198
DESIGN FOR A FINGER RING
Robert H. Taylor, Brooklyn, N. Y.
Application June 19, 1946, Serial No. 130,853
Term of patent 3½ years
(Cl. D45—10)

The ornamental design for a finger ring, as shown.

151,199
DESIGN FOR A TUB FILLER WITH TRANSFER UNIT FOR DIVERTING WATER TO SHOWER
Amy Lenore Thomssen, Toledo, Ohio, assignor to Barnes Manufacturing Co., Mansfield, Ohio, a corporation of Ohio
Application April 30, 1947, Serial No. 138,727
Term of patent 14 years
(Cl. D91—3)

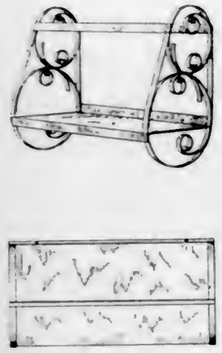
The ornamental design for a tub filler with transfer unit for diverting water to shower, as shown.

151,200
DESIGN FOR A BOWLING GAME BOARD
Harvey M. Wescott, South Westport, Mass.
Application September 18, 1946, Serial No. 133,391
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a bowling game board, as shown.

151,201
DESIGN FOR A RACK POOL BOARD
Harvey M. Wescott, South Westport, Mass.
Application September 18, 1946, Serial No. 133,392
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a rack pool board, as shown.

151,202
DESIGN FOR A CIGARETTE LIGHTER
Raymond Wolanske, North Tonawanda, N. Y., assignor to Hygrade Industries, Inc., Buffalo, N. Y., a corporation of New York
Application February 15, 1946, Serial No. 126,598
Term of patent 7 years
(Cl. D48—27)

The ornamental design for a cigarette lighter as shown and described.

151,203
DESIGN FOR A WALL SHELF OR SIMILAR ARTICLE
Saul K. Wolff, Long Beach, N. Y.
Application April 20, 1948, Serial No. 145,837
Term of patent 3½ years
(Cl. D33—3)

The ornamental design for a wall shelf or similar article, as shown.

Hides and leather. A. K. Saiz Company. 502,444, Sept. 28; Serial No. 506,839, published June 15, 1948.
Leather. Pfister & Vogel Tanning Co. 502,531, Sept. 28; Serial No. 534,921, published June 15, 1948.
Leather. Fred Rueping Leather Company. 502,543, Sept. 28; Serial No. 535,997, published June 22, 1948.
Leather and hydraulic leather, Flat belt. J. E. Rhoads & Sons. 227,552, May 10, 1927. Republished Sept. 28.
Resins, Synthetic. Advance Solvents & Chemical Corporation. 440,802, Sept. 28; Serial No. 517,685, published Jan. 20, 1948.
Resins, Synthetic. Monsanto Chemical Company. 440,754, Sept. 28; Serial No. 467,614, published June 22, 1948.
Resins, Synthetic. Monsanto Chemical Company. 440,755, Sept. 28; Serial No. 471,355, published June 22, 1948.
Resins, Synthetic. Monsanto Chemical Company. 440,809, Sept. 28; Serial No. 520,174, published June 22, 1948.
Resins, Synthetic. Monsanto Chemical Company. 502,445, Sept. 28; Serial No. 507,410, published June 8, 1948.
Rubber, Cushion. General Sports, Inc. 349,634, Aug. 31, 1937. Republished Sept. 28.
Seeds, Field, garden, and flower. Collins-Maddox Company. 440,796, Sept. 28; Serial No. 514,411, published June 15, 1948.
Sponges. American Sponge & Chamois Co., Inc. 502,545, Sept. 28; Serial No. 536,333, published June 22, 1948.
Sponges, Cellulose. O-Cel-O, Inc. 440,807, Sept. 28; Serial No. 519,689, published June 22, 1948.

CLASS 2

Cans, Garbage. Binswanger-Henkin Industries. 502,451, Sept. 28; Serial No. 520,260, published July 6, 1948.
Cans, Tin. Vulcan Tin Can Co. 502,538, Sept. 28; Serial No. 535,658, published July 6, 1948.
Garment bags, laundry bags, and shoe bags. Phoenix Closet Accessories, Inc. 395,108, May 12, 1942. Republished Sept. 28.
Pans for animals, Sanitary toilet. C. R. Blatchford. 502,442, Sept. 28; Serial No. 498,108, published July 6, 1948.

CLASS 3

Key holders, Leather. C. E. Erickson Co., Inc. 238,149, Jan. 31, 1928. Republished Sept. 28.
Trunk straps, woven razorstrops, woven skate straps, etc., Woven. Buffalo Weaving & Belting Company. 211,403, Apr. 13, 1926. Republished Sept. 28.
Trunks, hand trunks, and automobile trunks, Wardrobe. May & Malone, Incorporated. 284,261, June 23, 1931. Republished Sept. 28.

CLASS 4

Cleaner, cleanser, and detergent, Sudsing. Procter & Gamble Company. 502,587, Sept. 28; Serial No. 545,037, published July 6, 1948.
Cleanser for manikins and similar painted or enameled display fixtures and backgrounds. Bontee Laboratories. 436,889, Mar. 2, 1948. New Certificate. O. G. Sept. 28.
Compound, General cleaning and scouring. Royce Chemical Company. 340,954, Nov. 24, 1936. Republished Sept. 28.
Compounds in powdered form. E. F. Houghton & Co. 236,682, Dec. 20, 1927. Republished Sept. 28.
Compounds, Liquid scrubbing. Adco, Inc. 502,446, Sept. 28; Serial No. 509,317, published July 6, 1948.
Polish. J. L. Prescott & Co. 31,982, re-renewed Sept. 20, 1948. O. G. Sept. 28.
Polish, Metal. Magnetic Polish Company, Inc. 232,230, Sept. 6, 1927. Republished Sept. 28.
Polish, Silver. J. C. Penney Company. 242,178, renewed May 15, 1948. O. G. Sept. 28.
Powder, Washing and cleaning. A. Lenzner. 440,794, Sept. 28; Serial No. 511,628, published July 6, 1948.
Remover, Liquid wax, grease, and polish. Seidlitz Paint & Varnish Co. 502,596, Sept. 28; Serial No. 536,162.
Soap. Marie Earle, Inc. 244,225, renewed July 17, 1948. O. G. Sept. 28.
Soap. D. F. Nealon. 502,588, Sept. 28; Serial No. 547,142, published July 6, 1948.
Soap. Palmolive Peet Company. 251,214, renewed Jan. 1, 1949. O. G. Sept. 28.
Soap and soap cream, Toilet. Houbigant, Inc. 234,817, Nov. 8, 1927. Republished Sept. 28.
Soap, Dry-cleaning. C. E. Langfield. 243,223, June 12, 1928. Republished Sept. 28.
Soap or soap paste, Liquid. D. T. Products Co. 244,229, renewed July 17, 1948. O. G. Sept. 28.
Soap, Toilet. Cheramy, Inc. 157,654, Aug. 15, 1922. Republished Sept. 28.
Soaps. Andrew Jergens Company. 145,314, Aug. 2, 1921. Republished Sept. 28.
Soaps, Toilet. Marie Earle, Inc. 247,886, renewed Oct. 9, 1948. O. G. Sept. 28.
Soaps, Toilet. Parfumerie Houbigant. 139,598, Feb. 8, 1921. Republished Sept. 28.
Trunk straps, woven razorstrops, woven skate straps, etc., Woven. Buffalo Weaving & Belting Company. 211,403, Apr. 13, 1926. Republished Sept. 28.

CLASS 5

Cements, Adhesive. W. Marvin. 244,751, renewed July 24, 1948. O. G. Sept. 28.
Cereal product used in foundries as an adhesive. Miner-Hillard Milling Co. 502,536, Sept. 28; Serial No. 535,580, published June 8, 1948.
Compound, Liquid adhesive. Cambridge Rubber Company. 241,990, renewed May 8, 1948. O. G. Sept. 28.

CLASS 6

Acids, albumens, menthol, etc. H. S. Wellcome. 76,731, Feb. 8, 1910. Republished Sept. 28.
Amino acids, Brand of natural. Professional Pharmacal Company, Inc. 440,780, Sept. 28; Serial No. 506,264, published June 8, 1948.
Antacid and sedative. Bristol Laboratories Incorporated. 440,806, Sept. 28; Serial No. 518,935, published June 22, 1948.
Aqua ammonia, dry ammonia, laundry ammonia, etc. Citizens' Wholesale Supply Company. 150,294, Jan. 3, 1922. Republished Sept. 28.
Bath oil, face powder, bath powder, etc. H. P. Willats. 386,266, Apr. 1, 1941. Republished Sept. 28.
Brilliantine, face powder, face cream, etc. Cheramy, Inc. 146,966, Sept. 27, 1921. Republished Sept. 28.
Capsules, Pain relieving. J. M. Chamblin. 502,516, Sept. 28; Serial No. 533,444, published June 22, 1948.

Castor oil, Sulphonated for textile purposes. Royce Chemical Company. 292,822, Mar. 29, 1932. Republished Sept. 28.
Chemical compositions. National Aluminate Corporation. 395,917–18, June 16, 1942. Republished Sept. 28.
Chemical product. Society of Chemical Industry in Basle. 245,502, renewed Aug. 14, 1948. O. G. Sept. 28.
Chemical soot remover. H. Kirk White and Company. 502,534, Sept. 28; Serial No. 535,288, published July 6, 1948.
Chemicals adapted for discharging dyeings. Royce Chemical Company. 355,202, Mar. 8, 1938. Republished Sept. 28.
Chemicals adapted for the dyeing, bleaching, finishing, and treatment of textile fibers. Royce Chemical Company. 340,177, Nov. 3, 1936. Republished Sept. 28.
Chemicals employed in the treatment of water. National Aluminate Corporation. 342,307, Jan. 12, 1937. Republished Sept. 28.
Chemicals, medicines, and pharmaceutical products. R. J. Strasenburgh Company. 97,184, May 19, 1914. Republished Sept. 28.
Cologne. John H. Woodbury, Inc. 399,205, Dec. 22, 1942. Republished Sept. 28.
Cologne, perfumes, bath crystals, etc. Mayo Reese Inc. 440,773, Sept. 28; Serial No. 503,390, published June 29, 1948.
Compounds for absorbing water vapor, gases, and liquids, Desiccating. P. N. Davey. 502,539, Sept. 28; Serial No. 535,689, published June 29, 1948.
Cosmetics and beauty preparations. J. Cochran. 392,606, Jan. 6, 1942. Republished Sept. 28.
Cosmetics and beauty preparations. J. Cochran. 502,553, Sept. 28; Serial No. 537,418, published June 29, 1948.
Cream, Hand. Elmer and Amend. 502,492, Sept. 28; Serial No. 530,926, published June 8, 1948.
Cream tartar, tartaric acid, sodium potassium tartrate, etc. Stauffer Chemical Company. 502,485, Sept. 28; Serial No. 530,582, published June 29, 1948.
Cream, Toilet. P. Beiersdorf & Co., Inc. 249,754, renewed Nov. 20, 1948. O. G. Sept. 28.
Deodorant Geo. C. V. Fesler Company. 248,317, Oct. 16, 1928. Republished Sept. 28.
Deodorant. Andrew Jergens Company. 404,431, Nov. 23, 1943. Republished Sept. 28.
Dyes, bluing, and a preparation for removing colors from all fabrics and stains from white goods. North American Dye Corporation. 502,438, Sept. 28; Serial No. 489,674, published June 22, 1948.
Dyestuffs and pigment colors. Nova Chemical Corporation. 428,688, Apr. 1, 1947. Republished Sept. 28.
Dyestuffs and pigment colors. Nova Chemical Corporation. 429,470, Apr. 29, 1947. Republished Sept. 28.
Egg preserver, Water glass. Rutland Fire Clay Co. 155,813, June 6, 1922. Republished Sept. 28.
Egg preserver, Water glass. Rutland Fire Clay Co. 161,831, Nov. 31, 1922. Republished Sept. 28.
Ergosterol, Activated. Mead Johnson & Company. 244,145, renewed July 10, 1948. O. G. Sept. 28.
Face powder, dusting powder, perfume, and face tissues of paper. Marie Earle, Inc. 249,004, renewed Nov. 6, 1948. O. G. Sept. 28.
Face powder, talcum powder, rouge, etc. Valmor Health Products Co. 218,299, Sept. 21, 1926. Republished Sept. 28.
Gums suitable for the printing of textile fabrics. Royce Chemical Company. 334,938, May 19, 1936. Republished Sept. 28.
Hydrosulphite. Royce Chemical Company. 294,610, June 7, 1932. Republished Sept. 28.
Insect repellent. Phillips Petroleum Company. 440,790, Sept. 28; Serial No. 509,367, published June 29, 1948.
Insecticide, moth spray, and moth and larvae inhibitor. Enoz Chemical Company. 440,760, Sept. 28; Serial No. 486,090, published Dec. 24, 1946.
Insecticides. Balcom Industries, Inc. 502,593, Sept. 28; Serial No. 530,366.
Insecticides. R. R. Littell. 502,595, Sept. 28; Serial No. 534,161.
Insecticides. Stauffer Chemical Company. 502,497–8, Sept. 28; Serial Nos. 531,530–1, published July 6, 1948.
Insecticides, ant sprays, ant powders, etc. Great Northern Chemical Co. 367,208, May 9, 1939. Republished Sept. 28.
Licorice in stick, tablet, and pearl form. Tur Hermanos. 247,217, renewed Sept. 25, 1948. O. G. Sept. 28.
Licorice product. MacAndrewes & Forbes Company. 502,535, Sept. 28; Serial No. 535,423, published June 29, 1948.
Liniment. D. E. Oglesby. 502,597, Sept. 28; Serial No. 541,170.
Liniment. Dr. Earl S. Sloan, Incorporated. 247,636, renewed Oct. 2, 1948. O. G. Sept. 28.
Lotion, deodorants, after shave lotion, etc., Before shave. Gourielli, Inc. 440,795, Sept. 28; Serial No. 512,739, published June 15, 1948.
Medicinal or pharmaceutical preparation. Wm. J. Schepp Co., Inc. 440,763, Sept. 28; Serial No. 491,932, published Apr. 30, 1946.
Medicinal preparation. Desbergers Limited. 502,532, Sept. 28; Serial No. 535,005, published June 6, 1948.
Medicinal preparation. Ozomulsion Company. 502,589, Sept. 28; Serial No. 547,273, published June 29, 1948.
Medicinal preparations. Reed & Carnrick. 262,414, Oct. 8, 1929. Republished Sept. 28.
Medicinal preparations. Vincent Christina & Company, Inc. 440,764, Sept. 28; Serial No. 492,487, published June 22, 1948.
Medicine and a saline cathartic, Proprietary. Occy-Crystine Corporation. 248,095, renewed Oct. 16, 1948. O. G. Sept. 28.
Medicine for rheumatism. Weldona Company. 124,173, Jan. 14, 1919. Republished Sept. 28.
Mint-alcohol. E. De Ricqles & Cie. 21,900, re-renewed Nov. 1, 1942. O. G. Sept. 28.
Nasal douche powder. Pierce's Proprietaries, Inc. 502,537, Sept. 28; Serial No. 535,618, published June 15, 1948.
Nasal ointments. Sinclair Pharmacal Co., Inc. 138,512, Dec. 28, 1920. Republished Sept. 28.
Nickel brightener. Hanson-Van Winkle-Munning Company. 502,520, Sept. 28; Serial No. 534,278, published June 15, 1948.
Nickel salts and nickel brightener. Hanson-Van Winkle-Munning Company. 502,519, Sept. 28; Serial No. 534,277, published June 15, 1948.
Olive oil, Sulphonated. Royce Chemical Company. 292,820, Mar. 29, 1932. Republished Sept. 28.
Penicillin and aluminum hydroxide gel with calcium carbonate, Composition of. William R. Warner & Co., Inc. 440,777, Sept. 28; Serial No. 505,540, published June 29, 1948.
Perfume. Andrew Jergens Company. 418,569. Jan. 1, 1946. Republished Sept. 28.
Perfume extract and toilet water. Houbigant, Inc. 157,343, Aug. 1, 1922. Republished Sept. 28.
Perfume, toilet water, face lotion, face powder, etc. Cheramy, Inc. 157,316, Aug. 1, 1922. Republished Sept. 28.
Perfume, toilet water, face powder, etc. Houbigant, Inc. 181,408, Mar. 18, 1924. Republished Sept. 28.
Perfume, toilet water, face powder, etc. Houbigant, Inc. 207,709, Jan. 5, 1926. Republished Sept. 28.
Perfume, toilet water, face powder, etc. Houbigant, Inc. 234,458, Oct. 25, 1927. Republished Sept. 28.
Perfume, toilet water, face powder, etc. Houbigant, Inc. 300,161. Jan. 10, 1933. Republished Sept. 28.
Perfume, toilet water, face powder, talcum powder, etc. Houbigant, Inc. 180,501, Mar. 4, 1924. Republished Sept. 28.
Perfumes and rouges. J. Desprez. 440,765, Sept. 28; Serial No. 494,040, published July 9, 1946.
Perfumes and toilet waters. F. N. Lewis. 244,645, renewed July 24, 1948. O. G. Sept. 28.
Perfumes and toilet waters. Parfum L'Orle, Inc. 440,804, Sept. 28; Serial No. 518,030, published July 6, 1948.
Perfumes, essences of perfumes, etc. A. L. van Ameringen. 245,404, renewed Aug. 14, 1948. O. G. Sept. 28.
Perfumes, toilet water, face powder, and talcum powder. Lentheric Incorporated. 249,644, renewed Nov. 20, 1948. O. G. Sept. 28.
Perfumes, toilet water, face powder, etc. Houbigant, Inc. 300,997. Feb. 14, 1933. Republished Sept. 28.
Perfumes, toilet waters, rouge, lipstick, etc. Les Parfums Norante, Societe a Responsabilite Limitee. 502,467, Sept. 28; Serial No. 528,493, published June 15, 1948.
Perfumes, toilet waters, sachet, etc. Parfumerie Houbigant. 141,389–92, Apr. 19, 1921. Republished Sept. 28.
Pharmaceutical preparations. Society of Chemical Industry in Basle. 142,139, renewed May 3, 1941. O. G. Sept. 28.
Pharmaceutical preparations. R. J. Strasenburgh Company. 412,405, Mar. 6, 1945. Republished Sept. 28.
Powders and compact rouges, lip sticks, eyebrow pencils, etc., Compact. I. Miller & Sons, Inc. 250,663, renewed Dec. 11, 1948. O. G. Sept. 28.
Preparation for the relief of hay fever, sinus, and colds. J. B. Baker. 502,443, Sept. 28; Serial No. 504,242, published July 22, 1948.
Preparation for the treatment of bowed tendons, etc. Oldham's Iodothine Co. 440,792, Sept. 28; Serial No. 509,441, published June 29, 1948.
Preparation for the treatment of coughs due to colds. Homo Distributing Co., Inc. 390,087, Sept. 9, 1941. Republished Sept. 28.
Preparation for the treatment of dandruff. Sulfa-Bay Company, Inc. 502,506, Sept. 28; Serial No. 532,173, published June 29, 1948.
Preparation for treatment to relieve excessive perspiration. W. Nelson. 243,214, renewed June 12, 1948. O. G. Sept. 28.
Reagent for the purpose of detecting the pressure of occult blood. Ames Company, Inc. 502,585, Sept. 28; Serial No. 544,686, published June 15, 1948.
Reagent tablet for the purpose of evaluating the sulphonamide level in body fluids. Ames Company, Inc. 502,586, Sept. 28; Serial No. 544,687, published June 15, 1948.
Remedies for catarrh, hay-fever, cold in the head, etc. T. N. Kenyon. 38,348, May 27, 1902. Republished Sept. 28.
Rochelle salt, senna leaves, epsom salts, etc. Brunswig Drug Company. 297,333, Sept. 13, 1932. Republished Sept. 28.

Sal soda, baking soda, and bicarbonate of soda. Church & Dwight Co., Inc. 502,457, Sept. 28; Serial No. 526,743, published June 29, 1948.
Sal soda, washing soda, and bicarbonate of soda (baking soda). Church & Dwight Co., Inc. 502,458, Sept. 28; Serial No. 526,745, published June 29, 1948.
Salve, tonic, and lotion. Marie Earle, Inc. 247,632, renewed Oct. 2, 1948. O. G. Sept. 28.
Scale solvent, Acid. Diversey Corporation. 502,453, Sept. 28; Serial No. 522,736, published June 22, 1948.
Shampoo, Liquid. La France Laboratories Inc. 147,124, Oct. 4, 1921. Republished Sept. 28.
Shock absorber oil, shock absorber fluid, compound for repairing radiator leaks, etc. Park Chemical Company. 440,766, Sept. 28; Serial No. 496,654, published Dec. 2, 1947.
Sizing agents for knitting yarns. E. F. Houghton & Co. 502,517, Sept. 28; Serial No. 533,578, published June 8, 1948.
Soda ash and caustic soda and modified forms. Diamond Alkali Company. 152,151, Feb. 21, 1922. Republished Sept. 28.
Sour, Laundry. Speare Supply Company, The. 407,518, June 6, 1944. Republished Sept. 28.
Spreader for insecticides. Stauffer Chemical Company. 502,501, Sept. 28; Serial No. 531,537, published July 6, 1948.
Starch, Powdered laundry. Faultless Starch Company. 51,025, Apr. 3, 1906. Republished Sept. 28.
Sulphur. Stauffer Chemical Company. 502,496, Sept. 28; Serial No. 531,528, published July 6, 1948.
Sulphur. Stauffer Chemical Company. 502,499–500, Sept. 28; Serial Nos. 531,535–6, published July 6, 1948.
Sulphur. Stauffer Chemical Company. 502,549, Sept. 28; Serial No. 536,845, published June 22, 1948.
Sulphur, sulphate of alumina, iron sulphate, and carbon bisulphide. Stauffer Chemical Company. 502,508, Sept. 28; Serial No. 532,368, published June 15, 1948.
Tablets containing thyroid for internal consumption. Clark & Clark. 403,769, Oct. 19, 1943. Republished Sept. 28.
Talcum powder, rouge, cold cream, etc. Cheramy, Inc. 155,640, June 6, 1922. Republished Sept. 28.
Toilet preparation, Semi-solid. H. S. Wellcome. 71,267, Nov. 10, 1908. Republished Sept. 28.
Tonic, Vegetable compound. M. G. Neumann. 331,113, Dec. 31, 1935. Republished Sept. 28.
Veterinary preparation. Puritan Laboratories, Inc. 440,775, Sept. 28; Serial No. 504,211, published June 29, 1948.
Vitamin capsules. Sears, Roebuck and Co. 440,831, Sept. 28; Serial No. 492,965, published July 22, 1948.

CLASS 7

Rope and cables, Wire. American Steel & Wire Company of New Jersey. 71,585, re-renewed Dec. 1, 1948. O. G. Sept. 28.

CLASS 8

Cigarette cases. Evans Case Co. 502,484, Sept. 28; Serial No. 530,485, published July 6, 1948.
Cigarette cases. Springfield Leather Products Company. 251,571, renewed Jan. 8, 1949. O. G. Sept. 28.
Cigarette package holders of plastic material. Skinner & Kennedy Company. 502,552, Sept. 28; Serial No. 537,249, published July 6, 1948.

CLASS 9

Blasting powder, Permissible. King Powder Company. 502,505, Sept. 28; Serial No. 532,031, published May 11, 1948.
Firearms. O. F. Mossberg & Sons, Inc. 440,820, Sept. 28; Serial No. 523,068, published June 1, 1948.
Firecrackers. R. D. Lyon. 502,533, Sept. 28; Serial No. 535,247, published June 8, 1948.
Fuse. Ensign-Bickford Company. 187,764–5, Aug. 12, 1924. Republished Sept. 28.
Fuse. Ensign-Bickford Company. 188,178, Aug. 19, 1924. Republished Sept. 28.
Fuse, Detonating. Ensign-Bickford Company. 345,773, May 4, 1937. Republished Sept. 28.
Fuses. Climax Fuse Co. 56,489, Oct. 2, 1906. Republished Sept. 28.
Fuses. Coast Manufacturing & Supply Co. 62,243, Apr. 30, 1907. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 73,676, May 11, 1909. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 73,678, May 11, 1909. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 74,343, July 6, 1909. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 102,388–9, Feb. 9, 1915. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 102,391–3, Feb. 9, 1915. Republished Sept. 28.
Fuses. Ensign-Bickford Company. 104,286, May 18, 1915. Republished Sept. 28.
Ignition device. Ensign-Bickford Company. 385,372, Feb. 25, 1941. Republished Sept. 28.
Smokeless powder. Olin Industries, Inc. 502,462, Sept. 28; Serial No. 527,639, published June 8, 1948.

CLASS 10

Fertilizer, Inorganic. Farm Fertilizers, Inc. 502,495, Sept. 28; Serial No. 531,202, published June 1, 1948.
Fertilizer, Liquid plant food. Liquid Plant Food Company. 502,483, Sept. 28; Serial No. 530,325, published June 29, 1948.
Fertilizer, Organic. Union Stock Yards Company of Omaha, Ltd. 502,512, Sept. 28; Serial No. 532,889, published May 18, 1948.
Fertilizers, and chemical substances, Artificial and natural. B. R. Glaenzer. 502,441, Sept. 28; Serial No. 495,229, published May 4, 1948.

CLASS 11

Carbon black. Godfrey L. Cabot, Inc. 502,518, Sept. 28; Serial No. 534,088, published June 29, 1948.
Carbon paper. Horder's Incorporated. 366,162, Apr. 4, 1939. Republished Sept. 28.
Ribbons, etc., Adding, accounting, calculating, and typewriting machine. Stationers' Guild of America. 502,581, Sept. 28; Serial No. 541,375, published June 29, 1948.

CLASS 12

Bituminous material, High softening point. Ohio Oil Company. 502,529, Sept. 28; Serial No. 534,805, published June 22, 1948.
Brick and fire brick. Acme Brick Company. 502,472, Sept. 28; Serial No. 529,428, published June 22, 1948.
Brick and tile. Western Brick Company. 206,443, Dec. 1, 1925. Republished Sept. 28.
Bricks. Western Brick Company. 86,013, Apr. 2, 1912. Republished Sept. 28.
Building paper. Western Waxed Paper Company of Oregon. 258,930, July 16, 1929. Republished Sept. 28.
Buildings, portable buildings, knock-down buildings, etc., Readily erectable. Great Lakes Steel Corporation. 440,757, Sept. 28; Serial No. 476,099, published June 22, 1948.
Cement, iron cement, etc., Asbestos furnace. Rutland Fire Clay Co. 160,651, Oct. 24, 1922. Republished Sept. 28.
Cement, iron cement, etc., Asbestos furnace. Rutland Fire Clay Co. 163,759, Jan. 23, 1923. Republished Sept. 28.
Cement, Portland. Standard Portland Cement Company. 260,581, Aug. 27, 1929. Republished Sept. 28.
Construction material. Schumacher Wall Board Corporation. 248,241, renewed Oct. 16, 1948. O. G. Sept. 28.
Joint paste. W. R. Thurston. 248,283, renewed Oct. 16, 1948. O. G. Sept. 28.
Plaster for walls, Patching. Rutland Fire Clay Co. 159,754, Oct. 3, 1922. Republished Sept. 28.
Plaster for walls, Patching. Rutland Fire Clay Company. 324,155–6, May 14, 1935. Republished Sept. 28.
Refractory bricks, blocks, and grains. Corhart Refractories Company. 500,350, May 11, 1948. Corrected. O. G. Sept. 28.
Roofing, Felt. Stelwagon Manufacturing Company. 502,510, Sept. 28; Serial No. 532,653, published June 22, 1948.
Shingles and sidings. Tilo Roofing Company, Inc. 440,826, Sept. 28; Serial No. 524,633, published June 15, 1948.
Slates, tiles, plates, etc. Societe Francaise de l'Everite. 224,568–70, renewed Mar. 1, 1947. O. G. Sept. 28.
Stove lining, Plastic. Rutland Fire Clay Co. 152,978, Mar. 7, 1922. Republished Sept. 28.
Veneer board, Wood and paper. Chicago Mill and Lumber Company. 422,066, July 2, 1946. Republished Sept. 28.

CLASS 13

Angle irons, bed rail clips, bed rail fasteners, etc. National Lock Co. 419,976, Mar. 19, 1946. Republished Sept. 28.
Apparatus for preparing infusions. Automatic Grip-O-Lator Company. 268,715, Mar. 18, 1930. Republished Sept. 28.
Cocks, faucets, plumbing valve devices, etc. Cleveland Brass Manufacturing Company. 263,455, Nov. 5, 1929. New certificate. O. G. Sept. 28.
Fasteners of the slider-controlled type, Separable. Hookless Fastener Company. 250,113, renewed Nov. 27, 1948. O. G. Sept. 28.
Fasteners, Slider-controlled. North & Judd Manufacturing Company. 245,274, renewed Aug. 7, 1948. O. G. Sept. 28.
Hardware, Automobile body. Ternstedt Manufacturing Company. 244,392–3, renewed July 17, 1948. O. G. Sept. 28.
Valves and traps, Plumbing and steam fitting. Barnes & Jones, Incorporated. 295,523, July 5, 1932. Republished Sept. 28.

CLASS 14

Alloys in various forms. Eutectic Welding Alloys Corporation. 502,459, Sept. 28; Serial No. 526,926, published June 15, 1948.
Babbitt metal. Magnolia Metal Company. 502,447, Sept. 28; Serial No. 514,123, published June 8, 1948.
Castings, Steel. Z. V. S. Company. 502,554, Sept. 28; Serial No. 537,540, published June 29, 1948.
Copper in the form of wire bars, billets, etc. American Metal Company (Limited). 312,273, Apr. 24, 1934. Republished Sept. 28.

Frogs and crossings, Railroad. Cleveland Frog & Crossing Co. 502,479–80, Sept. 28; Serial Nos. 529,964–5, published June 8, 1948.
Hardware, Automobile body. Terstedt Manufacturing Company. 244,555, renewed July 24, 1948. O. G. Sept. 28.
Metal balls. National Supply Company. 136,878, Nov. 9, 1920. Republished Sept. 28.
Metal powders, and metal powders in paste form. Magna Manufacturing Co., Inc. 502,503, Sept. 28; Serial No. 531,816, published June 29, 1948.
Metal products. American Metal Company (Limited). 282,235, Apr. 14, 1931. Republished Sept. 28.
Metal products. American Metal Company (Limited). 283,049, May 12, 1931. Republished Sept. 28.
Rods and electrodes, Metal. Eutectic Welding Alloys Corporation. 502,460, Sept. 28; Serial No. 526,938, published June 8, 1948.
Rods and wires. Eutectic Welding Alloys Corporation. 502,469, Sept. 28; Serial No. 529,244, published June 8, 1948.
Sheets, cold rolled sheets, shapes, bars, etc., Hot rolled. Inland Steel Company. 502,450, Sept. 28; Serial No. 517,190, published June 1, 1948.
Sheets, strips, rails, etc. Inland Steel Company. 502,440, Sept. 28; Serial No. 494,272, published June 22, 1948.
Solder. Kester Solder Company. 502,470, Sept. 28; Serial No. 529,271, published June 22, 1948.
Steel. W. J. Holliday & Co. 502,493, Sept. 28; Serial No. 531,037, published June 8, 1948.
Steel bars of various shapes and sizes and on forgings, blocks, etc. Firth-Sterling Steel Company. 243,330, renewed June 19, 1948. O. G. Sept. 28.
Steel in bar, rod, rail, etc. Jno. Hy. Andrew & Co. Ld. 65,490, Oct. 8, 1907. Republished Sept. 28.
Steel, iron, brass, etc. Dodge Manufacturing Corporation. 245,508, renewed Aug. 14, 1948. O. G. Sept. 28.
Strip or sheet material, Metal. Superior Steel Corporation. 502,471, Sept. 28; Serial No. 529,422, published June 22, 1948.
Welding electrodes of the rod or wire type. McKay Company. 440,770, Sept. 28; Serial No. 499,422, published June 29, 1948.
Welding rods, Consumable metallic. Crucible Steel Company of America. 440,829, Sept. 28; Serial No. 525,550, published Nov. 18, 1947.
Wires, Corrosion resistant. Kenmore Metals Corporation. 440,808, Sept. 28; Serial No. 519,758, published June 29, 1948.

CLASS 15

Gasoline. Miller & Holmes, Inc. 385,302, Feb. 25, 1941. Republished Sept. 28.
Kerosene, gasoline, naphtha, etc. Macmillan Petroleum Products Company. 249,592, renewed Nov. 20, 1948. O. G. Sept. 28.
Oils and greases, Lubricating. Canfield Oil Company. 317,504, Sept. 25, 1934. Republished Sept. 28.

CLASS 16

Algin product. Kelco Company. 436,047, Sept. 23, 1947. Republished Sept. 28.
Algin product. Kelco Company. 440,783, Sept. 28; Serial No. 507,532, published May 25, 1948.
Linseed oil, turpentine, paint and enamel, etc. Western Auto Supply Company. 293,073, Apr. 5, 1932. Republished Sept. 28.
Paint enamel. Andrew Brown Company. 379,148, July 2, 1940. Republished Sept. 28.
Paint enamel. Western Auto Supply Company. 353,690, Jan. 11, 1938. Republished Sept. 28.
Paint enamel, asphalt roof paint, etc., Stovepipe. Rutland Fire Clay Co. 159,079, Sept. 19, 1922. Republished Sept. 28.
Paint thinner. P. L. Meadows. 416,943, Oct. 9, 1945. Republished Sept. 28.
Paints. Mason Paint Co., Inc. 423,278, Aug. 27, 1946. Republished Sept. 28.
Paints and paint enamel. C. A. Nash & Son, Inc. 392,220, Dec. 16, 1941. Republished Sept. 28.
Paints, etc., Dry, ready-mixed, and paste. Lehman Bros., Inc. 242,297, renewed May 22, 1948. O. G. Sept. 28.
Paints, paint enamels, lacquer, etc. House. Standard Industrial Products, Inc. 383,150, Nov. 26, 1940. Republished Sept. 28.
Paints, paint enamels, varnishes, etc., Ready-mixed. Western Auto Supply Company. 336,402, July 7, 1936. Republished Sept. 28.
Paints, varnishes, metallic lacquer, Ready-mixed. Standard Industrial Products, Inc. 382,445, Oct. 29, 1940. Republished Sept. 28.
Primer and finish coating for floors, Resinous, Plastic Engineering Corporation. 440,821, Sept. 28; Serial No. 523,205, published May 25, 1948.
Shellac, banana bronzing liquids, etc. Prepared. H. L. Greenbaum. 207,016, Dec. 15, 1925. Republished Sept. 28.
Wax and polish, Cleaner. Ken-Nite Company. 402,058, June 29, 1943. Republished Sept. 28.

CLASS 17

Cigars. Daniel Frank Company. 502,521, Sept. 28; Serial No. 534,426, published July 6, 1948.
Cigars. Federal Cigar Company, Inc. 248,633, renewed Oct. 23, 1948. O. G. Sept. 28.
Cigars. A. Sensenbrenner Sons. 502,582–3, Sept. 28; Serial Nos. 541,583–4, published July 6, 1948.
Cigars, cheroots, cigarettes, etc. D. Emil Klein Co., Inc. 502,477, Sept. 28; Serial No. 529,783, published July 6, 1948.
Cigars, cigarettes, and smoking tobacco. Cifuentes y Compañia. 440,817, Sept. 28; Serial No. 522,687, published July 6, 1948.

CLASS 19

Automobile heaters of the internal combustion type. Stewart-Warner Corporation. 344,788, Apr. 6, 1937. Republished Sept. 28.
Automobiles and motor-driven trucks. General Motors Corporation. 245,099, renewed Aug. 7, 1948. O. G. Sept. 28.
Bicycles, tricycles. Western Auto Supply Co. 289,563, Dec. 1, 1931. Republished Sept. 28.
Gears, Steering. International Motor Company. 328,409, Sept. 24, 1935. Republished Sept. 28.
Handling equipment, Material. Barrett-Cravens Company. 343,811, Mar. 9, 1937. Republished Sept. 28.
Seat covers for motor vehicles. Western Auto Supply Company. 419,362–3, Feb. 12, 1946. Republished Sept. 28.
Trucks and tractor trucks, Self-propelled commercial motor. International Motor Company. 303,673, June 6, 1933. Republished Sept. 28.
Trucks, Motor. International Motor Company. 291,095, Jan. 26, 1932. Republished Sept. 28.

CLASS 20

Mats and floor covering. Archer Rubber Products Co. Inc. 249,782, renewed Nov. 20, 1948. O. G. Sept. 28.

CLASS 21

Bells, buzzers, relays, etc., Electric. Signal Electric Manufacturing Co. 255,370, Apr. 23, 1929. Republished Sept. 28.
Cells, Electric. Societe Anonyme Le Carbone. 182,555, renewed Apr. 15, 1946. O. G. Sept. 28.
Control apparatus, Electric. Ward Leonard Electric Company. 348,307, July 20, 1937. Republished Sept. 28.
Control apparatus, Electric illumination. Ward Leonard Electric Company. 348,143, July 20, 1937. Republished Sept. 28.
Cooking stoves and electrical parts, etc., Electric. Electro-Master Company. 310,873, Mar. 13, 1934. Republished Sept. 28.
Dome lights and electric corner lights, Automobile electric. Ternstedt Manufacturing Company. 244,556, renewed July 24, 1948. O. G. Sept. 28.
Fluorescent lamps, electrical lighting fixtures, electrical appliances. American Fluorescent Lighting Corporation. 396,090, June 30, 1942. Republished Sept. 28.
Generator-brush holders, battery cables, generator housings. R. G. Lafite. 233,495, Oct. 4, 1927. Republished Sept. 28.
Lamps, Electric. P. E. Greenblat. 424,180, Sept. 24, 1946. Republished Sept. 28.
Lamps, Incandescent. Federal Distributing Company. 249,997, renewed Nov. 27, 1948. O. G. Sept. 28.
Radio receiving sets. Affiliated Retailers, Inc. 423,605, Sept. 3, 1946. Republished Sept. 28.
Radio receiving sets. W. J. Halligan. 322,050, Feb. 26, 1935. Republished Sept. 28.
Rheostats, electric illumination control apparatus, Electric. Ward Leonard Electric Company. 337,570, Aug. 11, 1936. Republished Sept. 28.
Spark plugs and spark plug porcelains. Western Auto Supply Company. 341,752, Dec. 22, 1936. Republished Sept. 28.
Storage batteries, Electrical. Vesta Accumulator Company. 69,872, re-renewed July 14, 1948. O. G. Sept. 28.
Switch handles, electric outlets, switch plates, etc., Electric. Arrow-Hart & Hegeman Electric Company. 335,050, May 19, 1936. Republished Sept. 28.

CLASS 22

Athletic and sporting goods. Ken-Wel Sporting Goods Co. Inc. 241,191, renewed Apr. 17, 1948. O. G. Sept. 28.
Bicycles, tricycles. Western Auto Supply Co. 289,563, Dec. 1, 1931. Republished Sept. 28.
Fishing reels and artificial fish baits. Fraser Reel and Specialty Company. 502,591, Sept. 28; Serial No. 518,396.
Roller skates. Chicago Roller Skate Company. 294,438–9, May 24, 1932. Republished Sept. 28.
Roller skates. Kohler Die & Specialty Company. 233,736, Oct. 11, 1927. Republished Sept. 28.
Trunk straps, woven razorstrops, woven skate straps, etc., Woven. Buffalo Weaving & Belting Company. 211,403, Apr. 13, 1926. Republished Sept. 28.

CLASS 23

Alarm-Whistles, Mechanical. Sireno Company. 70,228, rerenewed Aug. 11, 1948. O. G. Sept. 28.
Apparatus for the treatment of solids. Dorr Company. 248,626, Oct. 23, 1928. Republished Sept. 28.
Apparatus for the treatment of solids suspended in liquids. Dorr Company. 205,320, Nov. 3, 1925. Republished Sept. 28.

Apparatus for boarding, blocking, or setting the shape of articles. Paramount Textile Machinery Co. 378,112. May 28, 1940. Republished Sept. 28.
Blades, Safety razor. Marlin Firearms Company. 345,427, Apr. 27, 1937. Republished Sept. 28.
Chucks, Collet. Forst Brothers. 427,561, Feb. 11, 1947. Republished Sept. 28.
Conveyors of the adjustable boom type, Portable. Fairfield Engineering Company. 379,331, July 9, 1940. Republished Sept. 28.
Cutlery handles and picker sticks. Adams Plastics Co., Inc. 431,617. July 29, 1947. Republished Sept. 28.
Engines. Buda Company. 404,188, Nov. 9, 1943. Republished Sept. 28.
Fire extinguishing apparatus, Hand operated, portable, and stationary. American-La France and Foamite Corporation. 248,455, renewed Oct. 23, 1948. O. G. Sept. 28.
Hammers, mallets, and mauls. Greene, Tweed & Co. 313,729, June 5, 1934. Republished Sept. 28.
Handling equipment, Material. Barrett-Cravens Company. 343,811, Mar. 9, 1937. Republished Sept. 28.
Hoists. Chisholm & Moore Manufacturing Company. 65,207, re-renewed Sept. 10, 1947. O. G. Sept. 28.
Horns or alarms, Signal. Lovell-McConnel Manufacturing Company. 69,913, re-renewed July 14, 1948. O. G. Sept. 28.
Lug straps, loom straps, harness straps, etc. J. E. Rhoads & Sons. 227,553, May 10, 1927. Republished Sept. 28.
Milling machines, chucks and chuck attachments, etc. Birmingham Small Arms Company Limited. 70,339, re-renewed Aug. 25, 1948. O. G. Sept. 28.
Planers for metal working apparatus. William Sellers & Company, Incorporated. 386,827, Apr. 22, 1941. Republished Sept. 28.
Pneumatic tools. New Haven Vibrator Company, Inc. 333,894, Apr. 14, 1936. Republished Sept. 28.
Razors. Durham Safety Razor Co. 70,855, re-renewed Oct. 13, 1948. O. G. Sept. 28.
Saws, hatchets, claw-hatchets, etc. Boetticher & Kellogg Co. 98,123, July 7, 1914. Republished Sept. 28.
Tools, machines, and devices, Thread cutting. Oster Manufacturing Company. 70,024, July 21, 1908. Republished Sept. 28.
Vibrators and their controls, Hydraulic and pneumatic. Syntron Company. 415,309, Aug. 7, 1945. Republished Sept. 28.
Water-softening apparatus and parts therefor. Ward-Love Pump Corporation. 246,182, renewed Sept. 4, 1948. O. G. Sept. 28.
Wrenches and parts thereof. Greene, Tweed & Co. 178,287, Jan. 8, 1924. Republished Sept. 28.

CLASS 24

Covers and pads, Ironing-board. J. C. Penney Company. 245,668, renewed Aug. 21, 1948. O. G. Sept. 28.
Drying forms, Garment. Paramount Textile Machinery Co. 358,263, July 5, 1938. Republished Sept. 28.

CLASS 26

Alarm apparatus. Crescent Laboratories. 440,805, Sept. 28; Serial No. 518,520, published July 6, 1948.
Apparatus for revealing defects in metal members. Flannery Bolt Company. 412,045, Feb. 13, 1945. Republished Sept. 28.
Computing apparatus, Electrical. Dev-Ro Novelty Company, Not Inc. 440,814, Sept. 28; Serial No. 521,987, published July 6, 1948.
Controlling, indicating, and signalling apparatus, Automatic, electrically operated. Leeds & Northrup Company. 440,818, Sept. 28; Serial No. 522,797, published June 8, 1948.
Films, and slide film still pictures, Processed moving picture. Irena Film Studio. 440,774, Sept. 28; Serial No. 503,816, published July 6, 1948.
Frames, Spectacle. Victory Optical Manufacturing Company. 502,481, Sept. 28; Serial No. 530,133, published June 8, 1948.
Gas valves, etc., Thermostatically controlled. Lowell and Grayson Manufacturing Company. 432,481, Sept. 2, 1947. Republished Sept. 28.
Gauges and indicators, parts and fittings thereof, Liquid level. Reliance Gange Column Company. 502,476, Sept. 28; Serial No. 529,695, published June 6, 1948.
Instruments for determining the concentration of fatty materials in liquids. American Chemical Paint Company. 440,789, Sept. 28; Serial No. 509,263, published July 6, 1948.
Lens, Contact. G. J. Hellinger. 440,824, Sept. 28; Serial No. 524,188, published June 29, 1948.
Lenses, Photographic. Eastman Kodak Company. 502,474–5, Sept. 28; Serial Nos. 529,614–15, published June 15, 1948.
Machines for testing balance of tires. J. P. Lannen. 397,956, Sept. 29, 1942. Republished Sept. 28.
Measuring apparatus, Quantity. Bailey Meter Company. 356,669. May 10, 1938. Republished Sept. 28.
Meters, piston meters, disk meters, etc., Liquid. Worthington-Gamon Meter Company. 502,456. Sept. 28; Serial No. 526,728, published June 22, 1948.
Mount for telescopic gun sights. E. C. Herkner. 440,776, Sept. 28; Serial No. 505,496, published June 22, 1948.
Ophthalmic mountings. American Zyloptic Company, Incorporated. 440,797, Sept. 28; Serial No. 515,150, published July 6, 1948.
Ophthalmic mountings and parts thereof and optical viewing members or lenses. Versa-Lite Optical Corporation. 502,494, Sept. 28; Serial No. 531,165, published June 15, 1948.
Photographic equipment. Federal Manufacturing and Engineering Corp. 440,801, Sept. 28; Serial No. 517,565, published Jan. 27, 1948.
Screens, Motion picture. O. Hehn. 440,786, Sept. 28; Serial No. 508,907, published July 6, 1948.
Screw machine products. U. S. Automatic Corporation. 440,759, Sept. 28; Serial No. 486,015, published July 6, 1948.
Tape measures. Lufkin Rule Company. 502,487–90, Sept. 28; Serial No. 530,655–8, published June 15, 1948.
Tape measures. Lufkin Rule Company. 502,491, Sept. 28; Serial No. 530,660, published June 15, 1948.
Tape measures. Warren Featherbone Co. 502,486, Sept. 28; Serial No. 530,607, published June 15, 1948.

CLASS 28

Articles of jewelry. M. Wasilkoff. 244,674, renewed July 24, 1948. O. G. Sept. 28.
Holders, Collar. Baer & Wilde Co. 244,634, renewed July 24, 1948. O. G. Sept. 28.
Jewelry. Williams and Anderson Company. 313,752, June 5, 1934. Republished Sept. 28.
Jewelry, etc. Coro, Inc. 502,511, Sept. 28; Serial No. 532,690, published June 8, 1948.

CLASS 30

Flower pots. George Koch Sons, Inc. 376,478, Mar. 26, 1940. Republished Sept. 28.

CLASS 31

Filters, automatic sand filters, Automatic vacuum. Filtration Engineers, Incorporated. 429,458, Apr. 29, 1947. Republished Sept. 28.

Grapefruit juices. Florida Fruit Canners, Inc. 255,630, Apr. 30, 1929. Republished Sept. 28.
Lemons, grapefruit; fresh fruits. G. L. Dinjian. 242,599, renewed May 29, 1948. O. G. Sept. 28.
Macaroni food products and egg noodles. Minnesota Macaroni Company. 352,567, Dec. 7, 1937. Republished Sept. 28.
Malted milk and chocolate malted milk. Land O'Lakes Creameries, Inc. 238,023, renewed Jan. 24, 1948. O. G. Sept. 28.
Meats and meat products. Albany Packing Company, Inc. 390,097, Sept. 9, 1941. Republished Sept. 28.
Melons, Fresh. A. E. Engelman. 440,810, Sept. 28; Serial No. 520,204, published June 29, 1948.
Milk, Condensed. Borden's Condensed Milk Company. 72,214, re-renewed Jan. 12, 1949. O. G. Sept. 28.
Mincemeat. Atmore & Son, Inc. 240,300, Mar. 20, 1928. Republished Sept. 28.
Nougat bars, Chocolate. Fenn Bros. Inc. 70,918, Oct. 13, 1908. Republished Sept. 28.
Nuts, Salted. Tower Salted Nut Co. 440,815, Sept. 28; Serial No. 522,093, published June 29, 1948.
Oleomargarine. C. A. Swanson & Sons. 502,463, Sept. 28; Serial No. 528,038, published June 29, 1948.
Olive oil, bottled peppers, bottled pimentos, etc. L. and S. Packing Co., Inc. 459,847, May 20, 1947. Republished Sept. 28.
Pancake flour, Self-rising. Light Grain & Milling Co. 301,337, Feb. 28, 1933. Republished Sept. 28.
Pastry spice. Knickerbocker Mills Co. 205,606, Nov. 10, 1925. Republished Sept. 28.
Pickles. W. W. Dougherty. 440,828, Sept. 28; Serial No. 525,307, published June 29, 1948.
Prunes, Dried. Sweetarts Company. 242,227, renewed May 15, 1948. O. G. Sept. 28.
Salad oil. Conway Import Co., Inc. 336,436, July 7, 1936. Republished Sept. 28.
Sauce Bordelaise, sauce Newberg, etc. Steele-Wedeles Company. 244,065, renewed July 10, 1948. O. G. Sept. 28.
Sausage, Dried. Otto Roth & Co. Inc. 249,662–4, renewed Nov. 20, 1948. O. G. Sept. 28.
Syrups, Table. W. L. Craft. 265,714, Jan. 7, 1930. Republished Sept. 28.
Toast. Devon Bakeries, Inc. 299,766, Dec. 20, 1932. Republished Sept. 28.
Tomato catchup, chili sauce, and canned pork and beans. Greenabaum Bros., Inc. 156,679, July 11, 1922. Republished Sept. 28.
Vegetables, Fresh. A. E. Engelman. 440,799–800, Sept. 28; Serial Nos. 517,186–7, published June 29, 1948.
Vegetables, Fresh. Wilkinson Bros. 225,887, Mar. 29, 1927. Republished Sept. 28.
Vegetables, frozen applesauce, and frozen strawberries, Frozen. Great Lakes Growers Cooperative. 440,819, Sept. 28; Serial No. 522,859, published June 22, 1948.

CLASS 48

Beer. Miller Brewing Company. 362,399, Nov. 15, 1938. Republished Sept. 28.
Beer. Miller High Life Company. 305,854–5, Aug. 29, 1933. Republished Sept. 28.
Beer. Miller High Life Company. 305,870–1, Aug. 29, 1933. Republished Sept. 28.
Beer and ale. G. Krueger Brewing Company. 333,508, Mar. 24, 1936. Corrected. O. G. Sept. 28.
Malt beverages, Nonalcoholic, cereal. West End Brewing Co. 249,079, renewed Nov. 6, 1948. O. G. Sept. 28.

CLASS 49

Liqueurs. Chartreuse Corporation. 373,676–7, Dec. 19, 1939. Republished Sept. 28.
Rum. Destileria Serralles, Inc. 341,119, Dec. 1, 1936. New certificate. O. G. Sept. 28.
Rum and other spirituous liquors. Edmund Melhado & Co., Inc. 311,775–7, Apr. 3, 1934. New certificate. O. G. Sept. 28.
Rum and other spirituous liquors. Edmund Melhado & Co., Inc. 314,130, June 19, 1934. New certificate. O. G. Sept. 28.

CLASS 50

Doilies, Rubber. Webster Rubber Company. 271,642, June 17, 1930. Republished Sept. 28.
Fabrics, Rubberized. Hodgman Rubber Company, Inc. 328,199, Sept. 17, 1935. Corrected. O. G. Sept. 28.
Rugs and mats, Skin. Clark, Son & Morland, Limited. 236,306, Dec. 6, 1927. Republished Sept. 28.

Total	929			

Patents expiring: Patent Numbers 1,825,650 to 1,826,700, inclusive, issued October 6, 1931, expire October 6, 1948

Condition of Applications Under Examination at Close of Business Sept. 17, 1948

Total number of patent applications awaiting action, 156,080. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	8-28-47	1-24-47	2874
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	1-2-47	8-19-46	3037
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	11-25-47	11-12-47	1442
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Disptach; Store Service; Mining, Quarrying, and Ice Harvesting.	3-3-47	1-30-47	4015
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	2-18-47	9-3-46	1625
6. SURLE, H., Carbon Chemistry (part)	10-9 47	9-5-47	1838
7. HANLIN, GEORGE, Optics; Photographic Apparatus	12-13-47	7-30 47	1698
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	12-4-46	9-9-46	4428
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	6-19-47	1-11-47	2253
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	12-17-47	11-19-47	1688
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	11-10-47	1-7-48	768
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	10-22-47	9-6-46	2154
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	9-20-46	9-9-46	2418
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	11-28-47	9-26-47	1376
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	6-14-47	3-19-47	2091
16. LOVEWELL, N. N., Television; Telephony	10-15-47	6-12-47	1534
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	3-7-47	10-11-46	2078
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	7-15-47	8-28-46	1966
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	9-18-47	1-14 47	1921
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	3-14-47	11-19-46	2041
21. MADER, R. C., Textiles	10-11-47	8-7-47	1250
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	11-14-47	12-6-46	1737
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	9-30-47	8-13-46	1220
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	9-16-47	8-9-47	2760
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	11-12-47	1-20-47	1766
26. YOUNG, R. R., Electricity—Generation and Motive Power	12-30-47	12-2-47	1324
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	6-28-47	12-12-46	3515
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	8-11-47	8-7-47	1058
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	2-8-47	1-9-47	3208
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	12-16-47	8-5-47	1312
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	12-21-47	12-24-47	2204
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	3-6-47	11-5-46	3207
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	1-18-47	9-16-46	3538
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	1-17-47	8-28-46	1550
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	6-5-47	9-21-46	3302
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	11-4-46	9-16-46	1699
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	10-31-47	2-7-47	1481
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	7-5-47	5-1-47	1840
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	3-7-47	7-19-46	3010
40. DRUMMOND, E. J., Receptacles (part); Packages	2-13-47	10-21-46	3288
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	1-21-47	9-20 46	2372
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	12-17-47	12-30-47	1200
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	12-6-47	11-1-37	1346
44. HARVEY, L. P., Refrigeration; Preserving	9-28-46	7-22-46	1125
45. MANTER, W. B., Shafting and Flexible Shaft Couplings: Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sproket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	3-18-47	9-26-46	2902
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	6-11-47	8-16-46	1854

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 156,080. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	12-1-47	6-3-47	2236
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	12-17-47	2-24-47	1560
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	8-13-47	7-24-47	1572
50. LEVIN, SAMUEL, Synthetic Resins	12-5-47	7-31-47	2255
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	12-23-47	6-10-47	1826
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	9-22-47	12-14-46	3847
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	4-3-47	8-31-46	3651
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	12-2-47	7-18-47	1787
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	9-3-47	6-30-47	1984
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	10-22-47	10-31-47	1078
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	3-25-47	8-19-46	3632
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	12-31-46	10-30-46	2153
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	8-23-47	3-21-47	2011
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	12-23-47	5-27-47	1449
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	11-29-46	6-10-46	3626
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	3-14-47	9-12-46	1935
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	9-8-47	7-3-47	1496
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	2-16-48	2-13-48	1609
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	12-18-47	5-29-47	2130
66. LISANN, I., Geometrical Instruments	4-14-47	4-16-46	2089
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	6-24-47	4-25-47	2031
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	1-17-48	7-15-47	1464
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	6-21-47	10-14-46	1858
DESIGNS: BREHM, G. L.	2-1-47	3-3-48	8029

Total number of trade-mark applications awaiting action (including renewals and republications) 40,622. Date of oldest new application, Sept. 5, 1947; date of oldest amended application, Feb. 12, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	1-8-48	6-3-48	3061
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	9-17-47	3-20-48	5542
3. SUMMERS, G. S., Classes 13, 21, 23, 26	9-5-47	3-22-48	4828
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	9-26-47	3-12-48	4480
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	10-25-47	3-11-48	3306
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	11-14-47	4-26-48	3444
7. KEYS, C. M., Classes 16, 19, 55	9-15-47	3-20-48	2236
8. GEDIMAN, H. W. — Renewals	8-12-48	8-26-48	48
8. GEDIMAN, H. W. — Republications — All Classes	10-16-47	8-30-48	13588

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abercrombie & Fitch Company, New York, N. Y. Dart boards, beach equipment. Serial No. 530,045, Oct. 5. Class 22.

Ace Periodicals Inc., New York, N. Y. Periodical published bi-monthly or at other regular intervals. Serial No. 534,221, Oct. 5. Class 38.

Adler Co., The, Cininnati, Ohio. Men's, women's and children's knitted socks. Serial No. 514,876, Oct. 5. Class 39.

Aeroquip Corporation, Jackson, Mich., assignor to Standard Locknut & Lockwasher, Inc., Indianapolis, Ind. Metallic washers. Serial No. 497,436, Oct. 5. Class 13.

Affiliated Retailers, Inc., New York, N. Y. Automobile and bicycle tires and tubes, and fan belts. Serial No. 531,175, Oct. 5. Class 35.

Affleck, Augustus J., doing business under the name and style of Affleck Laboratories, Sacramento, Calif. Hygienic douche powder. Serial No. 546,537, Oct. 5. Class 6.

Affleck Laboratories: *See*—
Affleck, Augustus J.

Albany Billiard Ball Company, Albany, N. Y. Billiard balls. Serial No. 540,235, Oct. 5. Class 22.

Albert, Inc., Chicago, Ill. Women's, misses' and junior misses' or girls' undergarments. Serial No. 522,685, Oct. 5. Class 39.

Altec Lansing Corporation, Los Angeles and Hollywood, Calif. Speaker systems. Serial No. 520,598, Oct. 5. Class 21.

American Brake Shoe Company, New York, N. Y. Car wheels, brake shoes, brake shoe keys, etc. Serial No. 520,667, Oct. 5. Class 19.

Anchor Post Fence Company, Baltimore, Md. Metallic fencing. Serial No. 481,686, Oct. 5. Class 13.

Ardmore Chemical Company, The, Columbus, Ohio. Clothes bleach. Serial No. 514,792, Oct. 5. Class 6.

Armour and Company, Chicago, Ill. Sausage. Serial No. 528,400, Oct. 5. Class 46.

Armour and Company, Chicago, Ill. Soap. Serial No. 529,852, Oct. 5. Class 4.

Armour and Company, Chicago, Ill. Soap. Serial Nos. 529,854–5, Oct. 5. Class 4.

Atkinson Milling Company, Minneapolis, Minn. Hard wheat first clear flour. Serial No. 534,864, Oct. 5. Class 46.

Auburn Rubber Corporation, Auburn, Ind. Toy representation of some weapons, tractors, automobiles, etc. Serial No. 508,885, Oct. 5. Class 22.

Automatic Wire Goods Mfg. Co. Inc., New York, N. Y. Mixer strainers. Serial No. 525,177, Oct. 5. Class 23.

Avon Products, Inc., New York, N. Y. Cosmetic sets, etc. Serial No. 509,557, Oct. 5. Class 6.

B. R. Company: *See*—
Bronson Reel Company.

Baker Extract Company, Springfield, Mass. Camphor, camphorated oil, glycerine, etc. Serial No. 530,054, Oct. 5. Class 6.

Bal-Dart Incorporated, Detroit, Mich. Lawn sprinklers. Serial No. 512,482, Oct. 5. Class 13.

Barrell, William L., Company, New York, N. Y. Cotton duck in the piece. Serial No. 533,976, Oct. 5. Class 42.

Battles, Otto V., Los Olivos, Calif. Aberdeen-Angus cattle. Serial No. 518,195, Oct. 5. Class 1.

Beneficial Industrial Loan Corporation, Wilmington, Del. Services rendered in the small loan, instalment loan and instalment credit business. Serial No. 527,275, Oct. 5. Class 55.

Berndt-Dach, Incorporated, Los Angeles, Calif. Sound picture film recording galvanometers, amplifiers, cameras, etc. Serial No. 535,123, Oct. 5. Class 26.

Bersted Manufacturing Company, Fostoria, Ohio. Electrical appliances. Serial No. 519,721, Oct. 5. Class 21.

Beutex Corporation, Perth Amboy, N. J. Pressure sensitive adhesive sheets. Serial No. 498,050, Oct. 5. Class 5.

Bewley Mills, Fort Worth, Tex. Wheat flour. Serial No. 517,608, Oct. 5. Class 46.

Blake Manufacturing Co., Pawhuska, Okla. Air deflector. Serial No. 552,632, Oct. 5. Class 19.

Bloomsburg Mills, Inc., New York, N. Y. Piece goods. Serial No. 552,567, Oct. 5. Class 42.

Blue Moon Foods, Inc., Thorp, Wis., assignor to Blue Moon Foods, Inc., Dover, Del. Cheese and cheese spread. Serial No. 484,660, Oct. 5. Class 46.

Chemical products, Normally liquid organic. Givaudan-Delawanna, Inc. 502,715, Oct. 5; Serial No. 544,813, published July 6, 1948.

Chemicals. National Aluminate Corporation. 301,906, Mar. 21, 1933. Republished Oct. 5.

Chemicals for scouring, fulling, felting and softening textiles. Quaker Chemical Products Corporation. 502,652, Oct. 5; Serial No. 535,875, published June 22, 1948.

Coating and/or lubricant comprising essentially petroleum hydrocarbons and a small amount of a corrosion inhibiting chemical, Protective. Pure Oil Company. 502,619, Oct. 5; Serial No. 527,285, published June 15, 1948.

Coloring materials, Aniline. Schoellkopf, Hartford & Hanna Company. 71,242, re-renewed Nov. 10, 1948. O. G. Oct. 5.

Composition for the treatment of cellulose yarns. Southern Sizing Company. 502,691, Oct. 5; Serial No. 539,450, published June 8, 1948.

Compound in paste form, for treatment of foot corns. E. McClelland. 502,606, Oct. 5; Serial No. 515,960, published June 22, 1948.

Compound, lithium oxyquinolinate. Benzol Products Company. 502,712, Oct. 5; Serial No. 544,692, published July 6, 1948.

Compounds for human use. Maker of Kal, Inc. 502,629, Oct. 5; Serial No. 529,663, published June 22, 1948.

Cones, antiseptic powder, beef, etc., Antiseptic. Brunswig Drug Company. 211,032, Mar. 30, 1926. Republished Oct. 5.

Corrosion inhibiting coating liquids. Tremco Manufacturing Company. 396,691, July 28, 1942. Republished Oct. 5.

Cosmetics and beauty preparations. J. Cochran. 502,655, Oct. 5; Serial No. 536,584, published June 15, 1948.

Cough drops. Luden's Inc. 502,663, Oct. 5; Serial No. 537,912, published July 6, 1948.

Deodorant, Household. Belmont Laboratories. 416,037, Aug. 21, 1945. Cancelled. O. G. Oct. 5.

Dermato-therapeutic medication. Doak Company, Incorporated. 502,704, Oct. 5; Serial No. 543,905, published June 29, 1948.

Disinfectant. Southern Metal Stamping Co., Inc. 440,853, Oct. 5; Serial No. 510,032, published May 18, 1948.

Dye-containing liquids used in cosmetic compositions. Givaudan-Delawanna, Inc. 502,718, Oct. 5; Serial No. 544,817, published July 6, 1948.

Dyestuffs. Allied Chemical & Dye Corporation. 502,692–3, Oct. 5; Serial No. 539,469–70, published June 15, 1948.

Dyestuffs. Geigy Company, Inc. 502,703, Oct. 5; Serial No. 543,174, published June 22, 1948.

Eau de cologne water, perfumery, hair tonics, shampoo, pomade, brilliantine, etc. P. P. Mülhens. 245,510, renewed Aug. 14, 1948. O. G. Oct. 5.

Emulsion of cod liver oil. Morton Manufacturing Corporation. 374,938, Jan. 30, 1940. Republished Oct. 5.

Ergosterol, an anti-rachitic substance containing vitamin D, Activated. Mead Johnson & Company. 502,699, Oct. 5; Serial No. 541,754, published July 29, 1948.

Extract of cascara; lotion, etc., Fluid. Strawbridge & Clothier. 260,477, Aug. 27, 1929. Republished Oct. 5.

Feeding preparation and vitamin concentrate in dry, granular or powdered form, Medicinal. Nutritional Research Associates, Inc. 502,705, Oct. 5; Serial No. 544,183, published June 8, 1948.

Fluxes. Multicore Solders Limited. 502,599, Oct. 5; Serial No. 493,206, published July 6, 1948.

Fluxes employed in welding, brazing, soldering, etc. Eutectic Welding Alloys Corporation. 502,614, Oct. 5; Serial No. 526,927, published June 15, 1948.

Fluxes, Soldering. Kester Solder Company. 502,628, Oct. 5; Serial No. 529,270, published June 22, 1948.

Hair wash. Felix Tempest Co. 69,597, re-renewed June 23, 1948. O. G. Oct. 5.

Hypo-allergenic product designed as a substitute for milk. Mead Johnson & Company. 502,607, Oct. 5; Serial No. 516,938, published June 15, 1948.

Inhibitors, Sprouting. Faesy & Besthoff, Inc. 440,862, Oct. 5; Serial No. 514,019, published June 22, 1948.

Inorganic compounds of metals. United States Vanadium Corporation. 440,878, Oct. 5; Serial No. 519,303, published July 6, 1948.

Insecticide. Rogers Exterminating Company. 502,770, Oct. 5; Serial No. 543,328.

Instrument cleaner, Diamond. Dental Specialty Manufacturing Co., Inc. 428,719, Apr. 1, 1947. Republished Oct. 5.

Laxative chewing tablets. Health Products Corporation. 250,691, renewed Dec. 11, 1948. O. G. Oct. 5.

Laxative, Physiologic. Ames Company, Inc. 502,710, Oct. 5; Serial No. 544,684, published June 15, 1948.

Liniment. H. D. Hussey. 251,791, renewed Jan. 15, 1949. O. G. Oct. 5.

Liquid material, general odorants, Odoriferous. Givaudan-Delawanna, Inc. 502,727–8, Oct. 5; Serial Nos. 544,826–7, published July 6, 1948.

Liquid material, odorant for textile goods, Odoriferous. Givaudan-Delawanna, Inc. 502,726, Oct. 5; Serial No. 544,825, published July 6, 1948.

Liquid material, perfume base, Odoriferous. Givaudan-Delawanna, Inc. 502,719, Oct. 5; Serial No. 544,818, published July 6, 1948.

Liquid material, perfumes, Odoriferous. Givaudan-Delawanna, Inc. 502,724–5, Oct. 5; Serial Nos. 544,823–4, published July 6, 1948.

Liquid material, soap base perfumes, Odoriferous. Givaudan-Delawanna, Inc. 502,723, Oct. 5; Serial No. 544,822, published July 6, 1948.

Liquid material, soap base perfumes, Odoriferous. Givaudan-Delawanna, Inc. 502,730, Oct. 5; Serial No. 544,829, published July 6, 1948.

Lotion, After shaving. R. Z. Lindsay. 418,899, Jan. 15, 1946. Republished Oct. 5.

Lotion, Antiseptic. F. C. Russell. 440,837, Oct. 5; Serial No. 492,794, published July 6, 1948.

Lotion or wash, Skin. Cosmex Corp. 422,313, July 16, 1946. Cancelled Aug. 26, 1948. O. G. Oct. 5.

Lubricant, Surgical. Burroughs Wellcome & Co. (U. S. A.) Inc. 440,859, Oct. 5; Serial No. 512,962, published July 29, 1947.

Lye. H. M. Sinclair, Jr. 502,616, Oct. 5; Serial No. 527,005, published June 22, 1948.

Make-ups, Theatrical. M. Factor. 250,507–8, renewed Dec. 11, 1948. O. G. Oct. 5.

Medical preparation for use in the treatment of disorders of basal metabolism. Roche-Organon Inc. 440,869, Oct. 5; Serial No. 517,524, published July 6, 1948.

Medicinal preparation. Eli Lilly and Company. 502,737, Oct. 5; Serial No. 545,107, published June 22, 1948.

Medicinal tablets. Novocol Chemical Mfg. Co., Inc. 502,741, Oct. 5; Serial No. 547,867, published June 29, 1948.

Medicine for use in germ infections and as an antiseptic. Pyridium Corporation. 251,253, renewed Jan. 1, 1949. O. G. Oct. 5.

Medicine, Sarcoptic mange. Skipper's Remedies. 417,784, Nov. 13, 1945. Cancelled Aug. 26, 1948. O. G. Oct. 5.

Nitrous oxid. Oxygen Gas Company. 127,471, Nov. 11, 1919. Republished Oct. 5.

Nutritional spray for plants. Kilgore Seed Company. 502,610, Oct. 5; Serial No. 526,507, published June 29, 1948.

Odoriferous material, odorants for fly sprays and insecticides. Givaudan-Delawanna, Inc. 502,734, Oct. 5; Serial No. 544,833, published July 6, 1948.

Odoriferous material, ordorants for sprays and insecticides. Givaudan-Delawanna, Inc. 502,721, Oct. 5; Serial No. 544,820, published July 6, 1948.

Odoriferous material, odorants for textiles and rubber goods. Givaudan-Delawanna, Inc. 502,720, Oct. 5; Serial No. 544,819, published July 6, 1948.

Odoriferous material, suitable for use as a fixative in perfumes and the like. Givaudan-Delawanna, Inc. 502,735, Oct. 5; Serial No. 544,834, published July 6, 1948.

Oil. G. B. Carran. 278,439, Dec. 16, 1930. Republished Oct. 5.

Oil, Rubbing. A. W. Curtis, Jr. 416,249, Sept. 4, 1945. Republished Oct. 5.

Ointment. Foster Dack Co. 78,497, June 21, 1910. Republished Oct. 5.

Ointment, Borated. Horton & Converse. 502,601, Oct. 5; Serial No. 505,301, published July 6, 1948.

Ointment, Pomade. R. E. McMoore. 502,738, Oct. 5; Serial No. 545,145, published July 6, 1948.

Oxide, oxygen, carbon dioxide, etc., Nitrous. Ohio Chemical & Mfg. Co. 502,740, Oct. 5; Serial No. 547,758, published June 29, 1948.

Perfume and cologne. G. Begley, Jr. 416,330, Sept. 4, 1945. Cancelled Aug. 26, 1948. O. G. Oct. 5.

Perfume and talc powder. Colgate-Palmolive-Peet Company. 502,633, Oct. 5; Serial No. 531,890, published June 29, 1948.

Perfume, face powder, and talcum powder. Morton Manufacturing Corporation. 419,170, Feb. 5, 1946. Republished Oct. 5.

Perfume ingredient, Solvent. Givaudan-Delawanna, Inc. 502,722, Oct. 5; Serial No. 544,821, published July 6, 1948.

Perfume, toilet water, cologne. Benard & Honnorat. 502,743–4, Oct. 5; Serial Nos. 548,314–15, published June 29, 1948.

Perfume, toilet water, cologne. Benard & Honnorat. 502,745, Oct. 5; Serial No. 548,317, published June 29, 1948.

Perfumes, toilet waters, sachet and sachet powders. Parfumerie Houbigant. 146,323, Sept. 6, 1921. Republished Oct. 5.

Perfumery. Eau de Colognefabriek J. C. Boldoot N. V. 182,655, renewed Apr. 15, 1944. O. G. Oct. 5.

Perfumery, talcum powders, cosmetics, etc. Houbigant, Inc. 147,112, Oct. 4, 1921. Republished Oct. 5.

Powder and face powder. Talcum. Houbigant, Inc. 164,489, Feb. 20, 1923. Republished Oct. 5.

Powder, rouge, and lipstick, Face. R. Hudnut. 502,666, Oct. 5; Serial No. 538,135, published June 22, 1948.

Powder, talcum powder, and perfume, Face. Andrew Jergens Company. 153,647, Mar. 28, 1922. Republished Oct. 5.

Powder, Toilet. Andrew Jergens Company. 148,676, Nov. 22, 1921. Republished Oct. 5.

Preparation designed to restrain gonadotrophic action of the pituitary gland. E. P. McCullagh. 502,605, Oct. 5; Serial No. 513,893, published June 8, 1948.

Preparation for prevention of chapped lips and skin, etc. Morton Manufacturing Corporation. 405,186–7, Jan. 11, 1944. Republished Oct. 5.

Preparation for the treatment of cuts, sores, and other open wounds. F. M. Jones. 502,765, Oct. 5; Serial No. 533,317.

Preparation for use as an indicator for determining the presence or absence of sugar in urine. Ames Company, Inc. 502,711, Oct. 5; Serial No. 544,685, published June 15, 1948.

Preparation in powdered form to be used as a bleach and stain remover in washing clothes, sinks, refrigerators, etc. Kaleen Chemical Corp. 502,647, Oct. 5; Serial No. 534,148, published June 29, 1948.

Preparation intended for use in the treatment of bronchial spasm such as in asthma. Abbott Laboratories. 502,747, Oct. 5; Serial No. 550,197, published June 29, 1948.

Preparation of pure Jamaica ginger. Potter Drug & Chemical Corporation. 58,771, Dec. 25, 1906. Republished Oct. 5.

Preparation of salt, calcium, and phosphorus. Barton Salt Company. 336,417, July 7, 1936. Republished Oct. 5.

Preparation to be used on the lips as a conditioner. Morton Manufacturing Corporation. 382,841, Nov. 12, 1940. Republished Oct. 5.

Preparation used in the treatment of chapped hands, and the like. C. P. Brown. 375,567, Feb. 20, 1940. Republished Oct. 5.

Preparation used in the treatment of tuberculosis. Souza, Seabra & Cia., Ltda. 502,748, Oct. 5; Serial No. 550,268, published June 29, 1948.

Product for premature and newborn infants, Specially prepared. Mead Johnson & Company. 502,608, Oct. 5; Serial No. 516,939, published June 15, 1948.

Remedies for the cure or alleviation of croup, etc. Abbott Alkaloidal Co. 42,124, Feb. 23, 1904. Republished Oct. 5.

Remedies for the cure or alleviation of diseases, etc. Abbott Alkaloidal Co. 44,140, Feb. 7, 1905. Republished Oct. 5.

Rhubarb, sweet oil, glycerine, etc. Baker Extract Company. 308,444, Dec. 5, 1933. Amended. O. G. Oct. 5.

Rouge and lip sticks, Lip. Coty, Inc. 247,551, renewed Oct. 2, 1948. O. G. Oct. 5.

Sal soda and monobydrated carbonate of soda. Church & Dwight Co., Inc. 502,613, Oct. 5; Serial No. 526,763, published June 22, 1948.

Salve for treatment of cancer. L. Bocchio. 249,318, renewed Nov. 13, 1948. O. G. Oct. 5.

Salve, Medicated. Morton Manufacturing Corporation. 410,606, Dec. 5, 1944. Republished Oct. 5.

Salve or ointment, Medicinal. T. N. Kenyon. 101,782, Jan. 12, 1915. Republished Oct. 5.

Scalp and hair treating preparations, etc. M. L. Heim. 382,231, Oct. 22, 1940. Republished Oct. 5.

Sedative expectorant. Sharp & Dohme. 139,697, renewed Jan. 5, 1948. O. G. Oct. 5.

Shampoo and complexion cream, Liquid. Conti Products Corporation. 502,739, Oct. 5; Serial No. 547,403, published June 15, 1948.

Solution for the treatment of diarrhea in infants, Intravenous. Cutter Laboratories. 502,708, Oct. 5; Serial No. 544,330, published June 22, 1948.

Solvent preparation. Pennsylvania Refining Company. 502,768, Oct. 5; Serial No. 536,281.

Starch. Worthington Foods, Inc. 502,707, Oct. 5; Serial No. 544,311, published June 22, 1948.

Surgical dressing. Foster-Dack Co.. 205,795, Nov. 17, 1925. Republished Oct. 5.

Tablet, Reagent. Ames Company, Inc. 502,709, Oct. 5; Serial No. 544,683, published June 22, 1948.

Toilet preparations. John H. Woodbury, Inc. 395,543, Aug. 22, 1933. Republished Oct. 5.

Tonic and bitter stomachic, rectal ointment, salve, General. Pierce's Proprietaries, Inc. 502,667, Oct. 5; Serial No. 538,446, published June 29, 1948.

Tonic food beverage, Medicated. MacLeans Laboratories, Inc. 440,846, Oct. 5; Serial No. 506,116, published July 6, 1948.

Tonic, Liquid. Lanman & Kemp, Inc. 250,966, renewed Dec. 18, 1948. O. G. Oct. 5.

Water soluble fat, used as a softener. Haas-Miller Corporation. 502,746, Oct. 5; Serial No. 550,041, published June 29, 1948.

Waving lotions, Hair. Zotos Corporation. 309,971, Feb. 6, 1934. Republished Oct. 5.

Wood preservative and insecticide. El Roy Naval Stores, Inc. 352,916, Dec. 14, 1937. Republished Oct. 5.

Yeast cultures in mineral oil and agar agar emulsion. Otis E. Glidden & Co., Incorporated. 502,697, Oct. 5; Serial No. 540,540, published July 6, 1948.

CLASS 7

Rope and wire strand, Wire. American Chain & Cable Company, Inc. 356,482, Apr. 26, 1938. Republished Oct. 5.

Rope, cable, tarred lath, and fodder yarns, etc. Columbian Rope Company. 61,075, Mar. 5, 1907. Republished Oct. 5.

Rope, cable, tarred lath, and fodder yarns, etc. Columbian Rope Company. 65,092, Sept. 10, 1907. Republished Oct. 5.

CLASS 9

Fuses. Ensign-Bickford Company. 102,390, Feb. 9, 1915. Republished Oct. 5.

Matches. Donelson & Poston. 251,262, renewed Jan. 1, 1949. O. G. Oct. 5.

Matches. Donelson & Poston. 251,283, renewed Jan. 1, 1949. O. G. Oct. 5.

Rifles, Air. A. B. T. Manufacturing Corp. 502,753, Oct. 5; Serial No. 484,380.

Shotguns and rifles. Marlin Firearms Co. 72,755, Feb. 16, 1909. Republished Oct. 5.

Shotguns, rifles, revolvers. Marlin Firearms Company. 55,158, Aug. 7, 1906. Republished Oct. 5.

CLASS 10

Fertilizer. Armour Fertilizer Works. 337,219, Aug. 4, 1936. Republished Oct. 5.

CLASS 11

Carbon black for printing and lithographing inks. Godfrey L. Cabot, Inc. 502,658, Oct. 5; Serial No. 536,999, published June 15, 1948.

Carbon black for printing and lithographing inks. Godfrey L. Cabot, Inc. 502,664, Oct. 5; Serial No. 538,094, published June 15, 1948.

Carbon paper, Hectograph. Ditto, Incorporated. 502,698, Oct. 5; Serial No. 540,984, published June 15, 1948.

Carbon paper, typewriter ribbons, and inked ribbons. Nelson-Eismann Company. 502,624, Oct. 5; Serial No. 527,874, published June 22, 1948.

Inks, Printing and lithographing. W. D. Wilson Printing Ink Co. Ltd. 502,700, Oct. 5; Serial No. 542,383, published June 8, 1948.

Solution used in printing, Offset. Sprayomatic Products Company. 440,897, Oct. 5; Serial No. 525,415, published June 8, 1948.

Stamp pads and rubber stamp ink. Fulton Specialty Co. 502,641, Oct. 5; Serial No. 533,294, published June 8, 1948.

CLASS 12

Acoustical and sound absorbing plaster. Cleveland Gypsum Company. 502,688, Oct. 5; Serial No. 539,393, published June 29, 1948.

Asphalt compositions. E. L. Blum. 440,832, Oct. 5; Serial No. 486,455, published June 29, 1948.

Asphalt shingles and mineral-surfaced asphalt roofing, Mineral-surfaced. Flintkote Company. 233,861, Oct. 11, 1927. Republished Oct. 5.

Blocks and monumental stones, Granite. Boutwell Milne & Co. 95,516, Feb. 24, 1914. Republished Oct. 5.

Blocks used as filling or packing material for chemical towers or reaction spaces, Hollow. A. M. Fairlie. 245,589, renewed Aug. 14, 1948. O. G. Oct. 5.

Caulking and pointing compounds and roofing and dampproofing compounds. Tremco Manufacturing Company. 407,335, May 30, 1944. Republished Oct. 5.

Cement, Mastic. Tremco Manufacturing Company. 410,901, Dec. 26, 1944. Republished Oct. 5.

Cement, Portland. Marquette Cement Manufacturing Company. 502,617, Oct. 5; Serial No. 527,192, published June 1, 1948.

Cement, Portland. Missouri Portland Cement Company. 440,899, Oct. 5; Serial No. 525,656, published June 29, 1948.

Cement, Roof. Stelwagon Manufacturing Company. 502,635, Oct. 5; Serial No. 532,652, published June 22, 1948.

Colloid coating materials, Irreversible. Jennison-Wright Corporation. 502,618, Oct. 5; Serial No. 527,220, published June 1, 1948.

Composition of material. Dahlbert & Company, Inc. 167,870, May 8, 1923. Republished Oct. 5.

Elastic compound, Permanently. Tremco Manufacturing Company. 406,018, Mar. 7, 1944. Republished Oct. 5.

Fire brick, refractory brick, refractory blocks, etc. Massillon Refractories Company. 502,625, Oct. 5; Serial No. 528,125, published June 22, 1948.

Floor plates and door thresholds. Wooster Products, Inc. 291,265, Feb. 2, 1932. Republished Oct. 5.

Floor plates, ramp plates, and door thresholds. Wooster Products, Inc. 329,792, Nov. 12, 1935. Republished Oct. 5.

Flooring and trim, Hardwood. Bradley Lumber Company of Arkansas. 250,655, renewed Dec. 11, 1948. O. G. Oct. 5.

Hygroscopic composition in liquid form to be applied to roads, tennis courts, etc. Michigan Chemical Corporation. 440,847, Oct. 5; Serial No. 506,334, published June 29, 1948.

Lime and cement. Societe Anonyme des Chaux et Ciments de Lafarge et du Teil. 197,944, renewed Apr. 28, 1945. O. G. Oct. 5.

Lime and cement. Societe Anonyme des Chaux et Ciments de Lafarge et du Teil. 201,734, renewed Aug. 4, 1945. O. G. Oct. 5.

Liquid coatings, Protective. Tremco Manufacturing Company. 410,891, Dec. 26, 1944. Republished Oct. 5.

Lumber and railroad ties. Cleveland-Cliffs Iron Co. 318,350, Oct. 23, 1934. Republished Oct. 5.

Lumber, plywood, millwork, and moulding. Piedmont Pine Corporation. 502,648, Oct. 5; Serial No. 534,337, published June 29, 1948.

Mastic compound. Tremco Manufacturing Company. 407,710, June 20, 1944. Republished Oct. 5.

Mastic compound. Tremco Manufacturing Company. 416,434, Sept. 11, 1945. Republished Oct. 5.

Mouldings, Metal. Wooster Products, Inc. 352,222, Nov. 23, 1937. Republished Oct. 5.

Pliable, elastic material. Tremco Manufacturing Company. 408,763, Aug. 29, 1944. Republished Oct. 5.

Pulp-board. MacAndrews & Forbes Company. 100,573, Oct. 20, 1914. Republished Oct. 5.

Roofing and asphalt roofing; asphalt-plastic roof cement, Metal. Southern States Iron Roofing Company. 502,651, Oct. 5; Serial No. 535,639, published June 29, 1948.

Roofing, Felt. Stelwagon Manufacturing Company. 502,636, Oct. 5; Serial No. [illegible]4, published June 22, 1948.

Screens, Window. Ry-Lock Compa[illegible] Ltd. 440,882, Oct. 5; Serial No. 520,234, published June 29, 1948.

Sealing compound. Garlock Packing Company. 377,982–3, May 21, 1940. Republished Oct. 5.

Stair treads, floor plates, and ramp plates, Safety. Wooster Products, Inc. 285,075, July 14, 1931. Republished Oct. 5.

Stair treads, floor plates, ramp plates, etc., Metallic safety. Wooster Products, Inc. 330,263, Nov. 26, 1935. Republished Oct. 5.
Steel buildings, portable and sectional buildings, etc. International Derrick & Equipment Company. 502,689, Oct. 5; Serial No. 539,420, published June 22, 1948.
Strips for terrazzo flooring. Manhattan Terrazzo Brass Strip Company. 245,595, renewed Aug. 14, 1948. O. G. Oct. 5.
Tile, Ceramic. Dallas Ceramic Company. 502,630, Oct. 5; Serial No. 529,883, published June 1, 1948.
Top linings of brick or similar heat insulating material, Hot. Ferro Engineering Company. 283,631, June 2, 1931. Republished Oct. 5.
Treatment material for treating cement, concrete, and like surfaces. Tremco Manufacturing Company. 403,383, Sept. 21, 1943. Republished Oct. 5.

CLASS 13

Bolts, studs, nuts, etc. Aircraft Screw Products Company, Inc. 368,446, June 20, 1939. Republished Oct. 5.
Fasteners for shelf dividers and the like. Lyon Metal Products, Incorporated. 260,791, Aug. 27, 1929. Republished Oct. 5.
Hinges, catches, snap hooks, etc. Harvard Lock Company. 440,904, Oct. 5; Serial No. 525,840.
Lawn sprinkler. Stansen Corporation. 421,135, May 21, 1946. Canceled Aug. 26, 1948. O. G. Oct. 5.
Metal ware, Enameled. Jacob J. Vollrath Mfg. Co. 70,317, Aug. 18, 1908. Republished Oct. 5.
Screw connections and parts of screw connections. Aircraft Screw Products Company, Incorporated. 404,065, Nov. 2, 1943. Republished Oct. 5.
Screw connections and parts of screw connections. Aircraft Screw Products Company, Inc. 419,476, Feb. 19, 1946. Republished Oct. 5.
Sink tops, Kitchen. Kitchen Maid Corporation. 408,085, July 18, 1944. Republished Oct. 5.

CLASS 14

Alloy, Zinc-base. New Jersey Zinc Company. 251,579, renewed Jan. 8, 1949. O. G. Oct. 5.
Iron and steel in bars, blooms, and rings. Stora Kopparbergs Bergslags, Aktiebolag. 242,325, renewed May 22, 1948. O. G. Oct. 5.

CLASS 15

Candles. Smith & Nichols, Inc. 227,199, May 3, 1927 Republished Oct. 5.
Candles. Smith & Nichols, Inc. 229,111, June 21, 1927. Republished Oct. 5.
Candles. Smith & Nichols, Inc. 415,073–4, July 10, 1945. Republished Oct. 5.
Cleaner and lubricant, Handpiece. Dental Specialty Manufacturing Co., Inc. 418,052, Nov. 27, 1945. Republished Oct. 5.
Grease, Lubricating. Garlock Packing Company. 378,035, May 21, 1940. Republished Oct. 5.
Lubricating oils and greases. Tiona Refining Company. 241,496, renewed May 1, 1948. O. G. Oct. 5.
Lubricant and cleaner, Handpiece. Dental Specialty Manufacturing Co., Inc. 424,499, Oct. 8, 1946. Republished Oct. 5.
Lubricants. A. C. Buzby. 15,013, Dec. 13, 1887. Republished Oct. 5.
Oils and greases, Lubricating. G. B. Carran. 173,468, Sept. 25, 1923. Republished Oct. 5.
Oils and greases, Lubricating. Garlock Packing Company. 377,981, May 21, 1940. Republished Oct. 5.
Oils and greases, Lubricating. Garlock Packing Company. 381,919, Oct. 15, 1940. Republished Oct. 5.
Oils and greases, Lubrication. Marquette Petroleum Products, Inc. 325,198, June 11, 1935. Republished Oct. 5.

CLASS 16

Asphaltic compound in liquid form. Davison Chemical Corporation. 440,901, Oct. 5; Serial No. 470,966.
Dry powder for non-washable wall finish. Benjamin Moore & Company. 69,301, re-renewed June 2, 1948. O. G. Oct. 5.
Enamel in the nature of paint. Tropical Paint & Oil Company. 251,578, renewed Jan. 8, 1949. O. G. Oct. 5.
Enamels, Paint. Tremco Manufacturing Company. 344,275, Mar. 16, 1937. Republished Oct. 5.
Enamels, Paint. Tremco Manufacturing Company. 392,016, Dec. 2, 1941. Republished Oct. 5.
Enamels, Paint. Tremco Manufacturing Company. 408,181, July 25, 1944. Republished Oct. 5.
Enamels, varnishes, lacquers, Paint. Andrew Brown Company. 305,087, Aug. 1, 1933. Republished Oct. 5.
Paint, Enamel. Tremco Manufacturing Company. 416,992, Oct. 9, 1945. Republished Oct. 5.
Paint, Ready-mixed. Tremco Manufacturing Company. 401,058, Apr. 20, 1943. Republished Oct. 5.
Paint, Ready-mixed. Tremco Manufacturing Company. 408,563, Aug. 15, 1944. Republished Oct. 5.
Paints. Tremco Manufacturing Company. 392,676, Jan. 6, 1942. Republished Oct. 5.
Paints. Tremco Manufacturing Company. 393,383, Feb. 10, 1942. Republished Oct. 5.
Paints, etc., Dried, paste, and ready-mixed. Andrew Brown Co., Inc. 246,553, Sept. 11, 1928. Republished Oct. 5.
Paints, Ready mixed. Tremco Manufacturing Company. 407,701, June 20, 1944. Republished Oct. 5.
Varnishes, japans, oil-finish and bronzing liquid. Mayer & Loewenstein. 46,556, Sept. 26, 1905. Republished Oct. 5.
Wall-finish. Benjamin Moore & Company. 31,906, re-renewed Aug. 30, 1948. O. G. Oct. 5.

CLASS 17

Cigars. Donelson & Poston. 251,538, renewed Jan. 8, 1949. O. G. Oct. 5.

CLASS 19

Aircraft. Nelson Aircraft Corporation. 440,844, Oct. 5; Serial No. 504,571, published July 6, 1948.
Airplanes and structural parts. Boeing Airplane Company. 247,992, renewed Oct. 9, 1948. O. G. Oct. 5.
Automobile accessories. Houde Engineering Corporation. 248,512–13, renewed Oct. 23, 1948. O. G. Oct. 5.
Automobile seat covers, automobile gasoline tank caps, automobile radiator caps, etc., Fibre and cloth. Sun Oil Company. 440,898, Oct. 5; Serial No. 525,422, published July 6, 1948.
Automobiles. Ted's Motors, Inc. 502,702, Oct. 5; Serial No. 542,892, published July 6, 1948.
Automobiles, Reconditioned. Better Cars, Inc. 502,670, Oct. 5; Serial No. 538,714, published July 6, 1948.
Automotive accessories and replacement parts. E. H. Ebert. 440,885, Oct. 5; Serial No. 521,060, published July 6, 1948.
Bicycles. Mead Cycle Company. 502,620–1, Oct. 5; Serial Nos. 527,341–2, published July 6, 1948.
Bicycles and parts thereof. Sale & Co. (U. S. A.) Inc. 502,615, Oct. 5; Serial No. 526,980, published July 6, 1948.
Boats, Powered. Equitable Equipment Company, Inc. 502,694, Oct. 5; Serial No. 539,681, published July 6, 1948.
Bus bodies, Student and adult passenger. H. O. De Boer. 440,834, Oct. 5; Serial No. 489,902, published July 6, 1948.
Coaches, busses, motor vehicles, etc. Transicoach, Inc. 502,640, Oct. 5; Serial No. 533,213, published July 6, 1948.
Cushioned connections for use in vehicle. International Motor Company. 171,507, Aug. 7, 1923. Republished Oct. 5.
Dollies, Non-mechanical, hand operated. Hulbert Manufacturing Company. 440,890, Oct. 5; Serial No. 523,589, published July 6, 1948.
Marine propellers. F. E. Thompson, Jr. 502,627, Oct. 5; Serial No. 528,825, published July 6, 1948.
Marine vessels and ships and parts thereof. American Ship Building Company. 440,876–7, Oct. 5; Serial Nos. 519,156–7, published July 6, 1948.
Mats for motor vehicles. Cork Manufacturing Company Limited. 245,548, renewed Aug. 14, 1948. O. G. Oct. 5.
Metal parts for cushioned connections in vehicles. International Motor Company. 171,504, Aug. 7, 1923. Republished Oct. 5.
Perambulators. Grove Manufacturing Company, Inc. 440,839, Oct. 5; Serial No. 497,092, published July 6, 1948.
Platform-trucks. West Bend Equipment Co. 146,910, Sept. 20, 1921. Republished Oct. 5.
Propellers, propeller hubs, and propeller assemblies. Koppers Company. 410,586, Dec. 5, 1944. Republished Oct. 5.
Saddles. Troxel Manufacturing Company. 502,623, Oct. 5; Serial No. 527,861, published July 6, 1948.
Tanks, trailer tanks, refuse truck bodies, etc., Vehicular. Heil Co. 502,668, Oct. 5; Serial No. 538,637, published July 6, 1948.
Theft guards, Antisiphoning. Scully Signal Company. 394,290, Mar. 31, 1942. Re-republished Oct. 5.
Trailers, Automobile. Ben-Hur Mfg. Co. 440,849, Oct. 5; Serial No. 507,613, published July 6, 1948.
Trailers of the two wheel, tilt bed type. Meill-Blumberg Corporation. 502,701, Oct. 5; Serial No. 542,610, published July 6, 1948.
Trucks and hose reels, Combined hand. Morrone Mfg. Co. 502,634, Oct. 5; Serial No. 532,624, published July 6, 1948.
Trucks, Industrial warehouse trailers, dollies, etc., Hand-operated two and four wheel. Wurzburg Brothers. 440,855, Oct. 5; Serial No. 510,141, published July 6 1948.
Trucks, Mobile logging. Taylor Machine Works. 440,854, Oct. 5; Serial No. 510,130, published July 6, 1948.
Trucks, Motor. International Motor Company. 187,497, Aug. 5, 1924. Republished Oct. 5.
Trucks, Steel warehouse. Illinois Iron & Bolt Co. 502,612, Oct. 5; Serial No. 526,713, published July 6, 1948.
Trucks, Wheel. Rol-A-Way Company, Inc. 440,874, Oct. 5; Serial No. 518,854, published May 25, 1948.
Vehicles. Ohio Tubular Products Company. 440,848, Oct. 5; Serial No. 507,334, published July 6, 1948.

CLASS 21

Drink mixers, Electrically-operated. Hamilton Beach Manufacturing Company. 274,965, Sept. 9, 1930. Republished Oct. 5.
Electric motors. United States Electrical Manufacturing Company. 263,208, Nov. 5, 1929. Republished Oct. 5.
Electric motors. Yates-American Machine Company. 290,519, Jan. 5, 1932. Republished Oct. 5.
Electric resistance units, rheostats, regulators, etc. Ward Leonard Electric Company. 147,827–8, Nov. 1, 1921. Republished Oct. 5.
Lamps, etc., Electrical incandescent. Solar Electric Corporation. 429,745, May 13, 1947. Canceled Aug. 26, 1948. O. G. Oct. 5.

Bond, Willard H., Jr., assignor to American Seating Company, Grand Rapids, Mich. Chair standard. 151,210, Oct. 5.

Bradbury, Joseph W., Bridgeport, Conn. Soap dish. 151,211, Oct. 5.

Brohawn, Philip J., New York, N. Y., assignor to International Engraving Machine Corp. Engraving machine. 151,212, Oct. 5.

Bruner, Charles C., Wichita, Kans. Milking stool. 151,213, Oct. 5.

Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Cabinet or similar article. 151,214, Oct. 5.

Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Cabinet or similar article. 151,215, Oct. 5.

Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Cabinet or similar article. 151,216, Oct. 5.

Buehren, Mary, Winnetka, Ill. Combined ashtray, glass and poker chip holder. 151,217, Oct. 5.

Bulova Watch Company, Inc., assignee: *See*—
Fachon, Emil E.

Cameron, Paul P., assignor to Parker Products Company, Flint, Mich. Child's desk. 151,218, Oct. 5.

Clarke Sanding Machine Company, assignee: *See*—
Atkin, Kenneth C.

Clauser, Milton U., Los Angeles, and A. N. Hatch, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Turbine jet aircraft engine. 151,219, Oct. 5.

Coro, Inc., assignee: *See*—
Katz, Adolph.

Crain, Lloyd S., Evanston, Ill. Costumer or the like. 151,220, Oct. 5.

Daystrom Corporation, assignee: *See*—
Kipp, Karl.

Ditto, Arthur, assignor to Marine Optical Mfg. Co., Boston, Mass. Spectacle frame. 151,221, Oct. 5.

Ditto, Arthur, assignor to Marine Optical Mfg. Co., Boston, Mass. Spectacle frame. 151,222, Oct. 5.

Dix, Samuel A., assignor to Bartmann & Bixer, Inc., New York, N. Y. Textile fabric or similar article. 151,223, Oct. 5.

Dix, Samuel A., assignor to Bartmann & Bixer, Inc., New York, N. Y. Textile fabric or similar article. 151,224, Oct. 5.

Dix, Samuel A., assignor to Bartmann & Bixer, Inc., New York, N. Y. Textile fabric or similar article. 151,225, Oct. 5.

Dix, Samuel A., assignor to Bartmann & Bixer, Inc., New York, N. Y. Textile fabric or similar article. 151,226, Oct. 5.

Dix, Samuel A., assignor to Bartmann & Bixer, Inc., New York, N. Y. Textile fabric or similar article. 151,227, Oct. 5.

Doane, Leroy C., Essex, assignor to The Sight Light Corporation, Deep River, Conn. Floor lamp. 151,228, Oct. 5.

Douglas Aircraft Company, Inc., assignee: *See*—
Clauser, Milton U., and Hatch.

Eddy, Donald F., South Gate, Calif. Swimming flipper. 151,229, Oct. 5.

Ekco Products Company, assignee: *See*—
Zimmer, Myron J.

F. & N. Lawn Mower Company, The, assignee: *See*—
Kluter, Marlowe H.

Fachon, Emil E., Edgewood, R. I., assignor to Bulova Watch Company, Inc., New York, N. Y. Expansible link chain for a bracelet or similar article. 151,230, Oct. 5.

Funderburg, John E., Ashland, Ky. Game board. 151,231, Oct. 5.

Gardel, Robert, New York, N. Y. Connecting link for a necklace or similar article. 151,232, Oct. 5.

Goessling, Gerald A., Richmond Heights, assignor to Quick Point Pencil Co., St. Louis, Mo. Combination pen and pencil. 151,233, Oct. 5.

Graham, Elizabeth N., New York, N. Y. Combined eye shadow and rouge case. 151,234, Oct. 5.

Grosfeld House, Inc., assignee: *See*—
Buckner, Anthony J.

Harman, Gerald J., Beverly Hills, Calif. Trailer vehicle. 151,235, Oct. 5.

Harper, Philip S., assignor to Harper-Wyman Company, Chicago, Ill. Smoker's stand or the like. 151,236, Oct. 5.

Harper-Wynman Company, assignee: *See*—
Harper, Philip S.

Harris, Kenneth, and O. A. May, Chicago, Ill. Toothbrush. 151,237, Oct. 5.

Harris Manufacturing Company, assignee: *See*—
Inskeep, Oliver M.

Hatch, Arlton N.: *See*—
Clauser, Milton U., and Hatch.

Heintzelman, Leo A., Grand Rapids, Mich. Paring knife. 151,238, Oct. 5.

Herter, Albert H.: *See*—
Zeller, Henry, and Herter.

Hingelberg, Vilhelm, Aarhus, Denmark. Combined tea urn and stand. 151,239, Oct. 5.

Illinois Watch Case Co., assignee: *See*—
King, David M., and Wewetzer, Albert.

Inskeep, Oliver W., assignor to Harris Manufacturing Company, Stockton, Calif. Two-wheel trailer. 151,240, Oct. 5.

International Engraving Machine Corp., assignee: *See*—
Brohawn, Philip J.

Jones, John E., assignor to James C. Whittaker Co., Inc., Long Beach, Calif. Boat. 151,242, Oct. 5.

Jones, Theodore C., Louisville, Ky. Electrolytic water correction device. 151,243, Oct. 5.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,244, Oct. 5.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Clip or similar article. 151,245, Oct. 5.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,246, Oct. 5.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,247, Oct. 5.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,248, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,249, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,250, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,251, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 151,252, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,253, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,254, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,255, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,256, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,257, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article 151,258, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,259, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,260, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,261, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,262, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,263, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,264, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,265, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,266, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,267, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Jewelry finding or similar article. 151,268, Oct. 5.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,269, Oct. 5.
Kaufman, Martin, Minneapolis, Minn. Lounge. 151,270, Oct. 5.
King, David M., Chicago, and A. Wewetzer, Elgin, Ill., assignors to Illinois Watch Case Co. Combined lighter and cigarette case. 151,271, Oct. 5.
Kipp, Karl, assignor to Daystrom Corporation, Olean, N. Y. Towel rack. 151,272, Oct. 5.
Kirchhof, Edward A., Altadena, Calif. Table type refrigerator. 151,273, Oct. 5.
Kirschner, Henry E., St. Joseph, Mo. Hose reel. 151,274, Oct. 5.
Kluter, Marlowe H., assignor to The F. & N. Lawn Mower Company, Richmond, Ind. Power lawn mower. 151,275, Oct. 5.
Lamb, Hosea, Ponca City, Okla. Fish lure. 151,276, Oct. 5.
Lewis, Lyle L.: *See*—
Shoemaker, Paul E., and Lewis.
Little, John M., Toledo, Ohio, assignor to Westinghouse Electric Corporation. Refrigerator cabinet. 151,277, Oct. 5.
Louis Allis Company, The, assignee: *See*—
Wieseman, Theodore R., and Robinson.
Lucchesi, Jack, Chicago, Ill. Twine holder. 151,278, Oct. 5.
Magnavox Company, The, assignee: *See*—
Stone, Leland G.
Marine Optical Mfg. Co., assignee: *See*—
Ditto, Arthur.
Marrison, Warren A., Maplewood, N. J., and F. M. Thayer, Jackson Heights, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Desk stand for a hand telephone set. 151,279, Oct. 5.
May, Otto A.: *See*—
Harris, Kenneth, and May.
Merritt, Glenn W., assignor to The Nolan Company, Bowerston, Ohio. Railway car door opener and closer. 151,280, Oct. 5.
Meyer, Swen M., Stockton, Calif. Portable storage chest or similar article. 151,281, Oct. 5.
Middleton, Lois E., Oakland, Calif. Combined spoon and cup measurer. 151,282, Oct. 5.
Miller, Edith J. B., assignor to Associated Products, Inc., Chicago, Ill. Bottle cap. 151,283, Oct. 5.
Mistletoe Children's Products, Inc., assignee: *See*—
Shelton, Irving.
Morris, Richard B., Quincy, Ill. Jig-saw puzzle. 151,284, Oct. 5.
Motorola, Inc., assignee: *See*—
Jenks, Albert L.
Mullins Manufacturing Corporation, assignee: *See*—
Stanitz, Jacques.
Murdock Mfg. & Supply Co., The, assignee: *See*—
Bart, Thomas E.
Nolan Company, The, assignee: *See*—
Merritt, Glenn W.
Nutone, Incorporated, assignee: *See*—
Waltman, Chauncey E.
Packard Motor Car Company, assignee: *See*—
Yaeger, Howard F.
Parker Products Company, assignee: *See*—
Cameron, Paul P.
Pfeffer, David, New York, N. Y. Finger ring mounting 151,285, Oct. 5.
Plainville Stock Company, assignee: *See*—
Weisman, Julius.
Quick Point Pencil Co., assignee: *See*—
Goessling, Gerald A.
Robinson, Russell I.: *See*—
Wieseman, Theodore R., and Robinson.
St. Louis, Andrew H., Utica, N. Y. Oxygen therapy apparatus. 151,286, Oct. 5.
Sanders, Margaret, Pittsburgh, Pa. Combined dining table and writing desk. 151,287, Oct. 5.
Schwarz, Ernst G., New York, N. Y. Pendant charm. 151,288, Oct. 5.

Stone, Leland G., assignor to The Magnavox Company, Fort Wayne, Ind. Radio phonograph cabinet. 151,297, Oct. 5.
Sutton, Frank L., Buffalo, assignor to Bell Aircraft Corporation, Wheatfield, N. Y. Helicopter. 151,298, Oct. 5.
Swengel, Robert C., York, Pa. Hobby horse. 151,299, Oct. 5.
Thayer, Francis M.: *See*—
Marrison, Warren A., and Thayer.
Thompson, William F., Philadelphia, Pa. Clock. 151,300, Oct. 5.
Tuffo, James A., Boston, Mass. Combined wrist watch and stem guard. 151,301, Oct. 5.
Uydess, Benjamin, New York, N. Y. Bench vise. 151,302, Oct. 5.
Walsh, John J., St. Louis, Mo. Shoe. 151,303, Oct. 5.
Walsh, John J., St. Louis, Mo. Shoe. 151,304, Oct. 5.
Waltman, Chauncey E., assignor to Nutone, Incorporated, Chicago, Ill. Push button. 151,305, Oct. 5.
Weisman, Julius, Providence, R. I., assignor to Plainville Stock Company, Plainville, Mass. Alphabet for forming monograms or the like. 151,306, Oct. 5.
Westinghouse Electric Corporation, assignee: *See*—
Little, John M.
Weston, Alexander S., New York, N. Y. Combined cap and clip for a fountain pen or similar article. 151,307, Oct. 5.
Wewetzer, Albert: *See*—
King, David M., and Wewetzer.
Wieseman, Theodore R., and R. I. Robinson, assignors to The Louis Allis Company, Milwaukee, Wis. Electric motor. 151,308, Oct. 5.
Wittaker, James C., Co., Inc., assignee: *See*—
Jones, John E.
Witte, Samuel A., assignor to Wittle Mfg. & Sales Co., Chicago, Ill. Oscillating electric fan type heater. 151,309, Oct. 5.
Wittle Mfg. & Sales Co., assignee: *See*—
Witte, Samuel A.
Yaeger, Howard F., assignor to Packard Motor Car Company, Detroit, Mich. Vehicle hood ornament or similar article. 151,310, Oct. 5.
Zeller, Henry, and A. H. Herter, Denver, Colo. Exhaust fan. 151,311, Oct. 5.
Zimmer, Myron J., Wood Dale, assignor to Ekco Products Company, Chicago, Ill. Stirring apparatus. 151,312, Oct. 5.
Zimmer, Myron J., Wood Dale, assignor to Ekco Products Company, Chicago, Ill. Stirring apparatus. 151,313, Oct. 5.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 5TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A C F-Brill Motors Company, assignee: *See*—
Flogaus, Howard A.
Achenbach, Charles J., Manitowoc, Wis. Traction shoe attachment for wheels. 2,450,776, Oct. 5.
Adam, Frank, Electric Company, assignee: *See*—
Williams, Floyd C.
Addressograph-Multigraph Corporation, assignee: *See*—
Gruver, John H.
Agriculture, The United States of America as represented by the Secretary of, assignee: *See*—
Dunning, John W., and Lathrop.
Schomer, Harold A.
Aircraft Mechanics Inc., assignee: *See*—
Robins, Jack B.
Airex Manufacturing Company, Inc., assignee: *See*—
Solovioff, Nicholas N., and Kling.
Alabama Textile Engineering Company, Inc., The, assignee: *See*—
West, William H.
Allen, Charles F. H., Rochester, N. Y., and A. Bell, Knoxville, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Sulfamyl-2-mercaptobenzothiazoles. 2,450,777, Oct. 5.
Allied Chemical & Dye Corporation, assignee: *See*—
Poltica, George K.
Weber, Edward.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Higgins, Arthur K.
Allshouse, Harlow E.: *See*—
Buttner, William C., and Allshouse.
Altamura, Mario S., Brooklyn, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Amides from sulfonyl fluorides. 2,450,883, Oct. 5.
American Associated Companies, Inc., assignee: *See*—
Ferguson, Albert G.
American Cyanamid Company, assignee: *See*—
Dean, Russell T., and Hook.
Anderson, Harold W., Scotia, N. Y., assignor to General Electric Company. High-frequency induction heating system. 2,450,623, Oct. 5.
Anderson, Paul, San Antonio, Tex. Centrifugal fan. 2,450,708, Oct. 5.
Angelus Paper Box Company, assignee: *See*—
Barber, Earl.
Aquilino, Frank, New York, N. Y. Arch steel shank. 2,450,624, Oct. 5.
Argus, Incorporated, assignee: *See*—
Leeman, Frederick G.
Arkay Infants Wear, Inc., assignee: *See*—
Buchler, Ernest.
Armour and Company, assignee: *See*—
Potts, Ralph H.
Roundy, Zola D., and Keil.
Armstrong Cork Company, assignee: *See*—
Baymiller, John W.
Associated Development and Research Corporation, assignee: *See*—
Wallach, Robert S.
Bahnson, Agnew H., Jr., Winston-Salem, N. C. Ductless system. 2,450,571, Oct. 5.
Baker, Aaron A., Coalinga, assignor to Baker Oil Tools, Inc., Vernon, Calif. Lock device for well tools. 2,450,822, Oct. 5.
Baker Oil Tools, Inc., assignee: *See*—
Baker, Aaron A.
Bakker, Jan: *See*—
Gisolf, Jacob H., Kröger, and Bakker.
Baldwin Locomotive Works, The, assignee: *See*—
Hofmann, Richard U.
Ballard, Virgil, Caldwell, Idaho. Decoy. 2,450,572, Oct. 5.
Bambas, Louis L., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Process for obtaining thiosemicarbazide. 2,450,406, Oct. 5.
Barber, Earl, assignor to Angelus Paper Box Company, Los Angeles, Calif. Folding box. 2,450,573, Oct. 5.
Barnett, Benjamin: *See*—
Vaughan, William E., and Barnett.
Bartgis, James E., Jr., Frederick, Md. Mine. 2,450,407, Oct. 5.
Bastian-Blessing Co., The, assignee: *See*—
Buttner, William C.
Buttner, William C., and Allshouse.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Humidity control means responsive to movements of a refrigerator door. 2,45,823, Oct. 5.
Bauman, Karl, Mere, Knutsford, assignor to Meetropolitan-Vickers Electrical Company Limited, London, England. Axial flow compressor. 2,45,745, Oct. 5.
Bausch & Lomb Optical Company, assignee: *See*—
Bouchard, Samuel E.
Baymiller, John W., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Textile fiber drafting element. 2,450,408, Oct. 5.
Baymiller, John W., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Roll cover for textile fiber drafting. 2,450,409, Oct. 5.
Baymiller, John W., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Roll cover for textile fiber drafting. 2,450,410, Oct. 5.
Beall, Benjamin S.: *See*—
Boisseau, Alexander C., Beall, Frank, and Lowery.
Beaudin, John P., Montreal, Quebec, Canada. Folding ski. 2,450,538, Oct. 5.
Beecher, John W., assignor to The Bristol Company, Waterbury, Conn. Fluid-pressure-responsive element. 2,450,625, Oct. 5.
Behnke, Albert O., Dayton, Ohio, and C. Kriegel, Wharton, Tex. Plate trimmer control. 2,450,411, Oct. 5.
Beilock, David, New York, N. Y. Toothbrush holder. 2,450,626, Oct. 5.
Bell, Alan: *See*—
Allen, Charles F. H., and Bell.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Brown, John T. L.
Kinkead, Fullerton S., Phelps, Smith, Singer, and Melhuish.
Mason, Warren P.
Beman, Ward W., Glendale, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Aircraft control. 2,450,709, Oct. 5.
Bendix Aviation Corporation, assignee: *See*—
Merritt, George E.
Root, Charles W.
Tognola, Tullio.
Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Device for transmitting and receiving compressional energy. 2,450,412, Oct. 5.
Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Spark transmitter. 2,450,413, Oct. 5.
Benning, Anthony F., Woodstown, N. J., assignor to Kinetic Chemicals, Inc., Wilmington, Del. Distillation process for separating products of chloroform fluorination. 2,450,414, Oct. 5.
Benning, Anthony F., Woodstown, N. J., assignor to Kinetic Chemicals, Inc., Wilmington, Del. Distillation process for separating products of carbon tetrachloride fluorination. 2,450,415, Oct. 5.
Bent, Arthur J., Penn Township, Allegheny County, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Load compensating brake. 2,450,464, Oct. 5.
Berger, Henry G., T. T. Noland, and E. W. Fuller, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition and improving agent thereof. 2,450,405, Oct. 5.
Bibb, John T., San Luis Rey, Calif. Draft operated angling mechanism for disk harrows. 2,450,574, Oct. 5.
Biedermann, Robert, assignor to J. R. Geigy A.-G., Basel, Switzerland. Phenoxyphenyl propyl amines. 2,450,497, Oct. 5.
Binkley, Stephen B.: *See*—
Bird, Orson D., and Binkley.
Bird, Orson D., and S. B. Binkley, assignors to Parke, Davis & Company, Detroit, Mich. Obtaining an antianemia vitamin product. 2,450,710, Oct. 5.
Bishop, Richard B.: *See*—
Denton, William I., and Bishop.
Marisic, Milton M., Denton, and Bishop.
Bliss, Lester E., assignor to Eastman Kodak Company, Rochester, N. Y. Safelight filter. 2,450,746, Oct. 5.
Bloch, Herman S., assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of tetrabasic acids. 2,450,627, Oct. 5.
Bludworth, Joseph E., Corpus Christi, Tex., and D. P. Easter, Washington, D. C., assignors to Celanese Corporation of America. Ethers of 1-methylolcyclohexylcyclohexylcarbinol. 2,450,498, Oct. 5.
Boehm, Milos E., assignor to Hughes Tool Company, Houston, Tex. Double seal grip tool joint. 2,450,453, Oct. 5.
Bohn, Paul E.: *See*—
Smith, Vernon C., and Bohn.

Boisseau, Alexander C., Lansdowne, B. S. Beall, Upper Darby, E. J. Frank, Springfield, and R. W. Lowery, Aldan, Pa., assignors to General Electric Company. Circuit breaker operating system. 2,450,628, Oct. 5.

Bolling, Stewart, Cleveland, Ohio. Working rubber. 2,450,575, Oct. 5.

Bondley, Ralph J., Scotia, N. Y., assignor to General Electric Company. Ultra high frequency magnetron generator. 2,450,629, Oct. 5.

Boonen, Henri M., assignor of one-half to T. J. Melancon, Houma, La. Solder. 2,450,778, Oct. 5.

Borglin, Joseph N., assignor to Hercules Powder Company, Wilmington, Del. Process for polymerizing butadiene in aqueous emulsion in the presence of an alkali metal salt of hydroxytetrahydroabietic acid. 2,450,416, Oct. 5.

Bossi, Romeo A., Newton Center, Mass. Universal ray or beam reflecting device. 2,450,417, Oct. 5.

Bouchard, Samuel E., Brighton, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Semirimless spectacle mounting. 2,450,711, Oct. 5.

Bourne, Edmund W., Jr., Utica, N. Y. Signal plug for engine failure warning systems. 2,450,630, Oct. 5.

Bradshaw, Robert, assignee: *See*—
Pulver, Harold M.

Brammer, Harry, Leeds, England. Belting. 2,450,576, Oct. 5.

Bratburd, David H., Bayside, N. Y. Adjustable hanger for frames. 2,450,465, Oct. 5.

Bresault, Delphis C., Lowell, Mass. Oil burner. 2,450,418, Oct. 5.

Bristol Company, The, assignee: *See*—
Beecher, John W.

Brock, Joseph L., Arcadia, Calif. Dolly wheel plate. 2,450,539, Oct. 5.

Brown, Anthony G., Lakewood, assignor by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Electrical coil tester. 2,450,577, Oct. 5.

Brown, Charles F., Bethany, W. Va., assignor to United States Rubber Company, New York, N. Y. Preparation of aqueous dispersions of synthetic rubbers. 2,450,578, Oct. 5.

Brown, Charles F., Bethany, W. Va., assignor to United States Rubber Company, New York, N. Y. Preparation of aqueous dispersions of synthetic rubbers. 2,450,579, Oct. 5.

Brown, John T. L., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Circuit maker and breaker. 2,450,499, Oct. 5.

Brown, Leo H., Glenville, Conn. Multiple reticle collimating gun sight. 2,450,712, Oct. 5.

Brozek, Lawrence, Jackson Heights, assignor to Waldes Koh-I-Noor, Inc., Long Island City, N. Y. Slide fastener. 2,450,779, Oct. 5.

Brunsing, Rex. L., San Francisco, Calif. Refrigerating system using dry ice and including a secondary heat exchange circuit. 2,450,713, Oct. 5.

Buchler, Ernest, Sunnyside, Long Island, assignor to Arkay Infants Wear, Inc., New York, N. Y. Garment. 2,450,631, Oct. 5.

Bucklen, Herbert E., III, assignor to Durakool, Inc., Elkhart, Ind. Electrode mounting means for mercury switches and relays. 2,450,780, Oct. 5.

Buggie, H. H., & Company, assignee: *See*—
Sprigg, Edward A.

Burney, Donald E.: *See*—
D'Ouville, Edmond L., and Burney.

Buttner, William C., Winnetka, assignor to The Bastian-Blessing Co., Chicago, Ill. Liquefied gas dispensing apparatus. 2,450,824, Oct. 5.

Buttner, William C., Winnetka, and H. E. Allshouse, assignors to The Bastian-Blessing Co., Chicago, Ill. Carbonated water dispenser. 2,450,825, Oct. 5.

Caldwell, Hamilton P., Jr., and H. D. Chapman, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,832, Oct. 5.

Caldwell, Lyle, assignee: *See*—
Greentree, Alexander.

California Research Corporation, assignee: *See*—
Clayton, James O.

Callaway, Clarence R., New York, N. Y., and F. R. Dunn, Little Ferry, N. J., assignors to Motor Economy Products, Inc., New York, N. Y. Crankcase ventilating apparatus. 2,450,864, Oct. 5.

Campbell, Garrett E., Modesto, Calif. Ironing cord holder. 2,450,714, Oct. 5.

Campbell, Willard S., assignor to M & C Conveyors, Inc., Chicago, Ill. Milk sampler. 2,450,715, Oct. 5.

Canada Trust Company, The, executrix: *See*—
Wilkinson, George H.

Cantley, Joseph C., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Bomb rack magazine with release mechanism. 2,450,540, Oct. 5.

Capitan, Joseph J., assignee: *See*—
Whiteley, Arlie E.

Cardox Corporation, assignee: *See*—
Williamson, Hilding V.

Carey, Leroy J.: *See*—
Galley, John H., and Carey.

Carlson, J. A., Edwin, assignor to Jacobsen Manufacturing Company, Racine, Wis. Lawn mower. 2,450,849, Oct. 5.

Carlson, Richard, Hamilton, Mont. Telescope mounting for guns. 2,450,466, Oct. 5.

Carlson, Swan O., Paton, Iowa. Air pressure water system. 2,450,781, Oct. 5.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Harris, Elmer F.

Carroll, Burt H., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic emulsion containing nitraniline sulfonic acids. 2,450,747, Oct. 5.

Carroll, Burt H., and J. Spence, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic silver halide emulsion supersensitized with a c-acyloxy quinoline base. 2,450,748, Oct. 5.

Cascia, Angelo, Bronx, N. Y. Blindlike shade. 2,450,782, Oct. 5.

Cassidy, John H., and R. M. Grunden, assignors to The Hinde & Dauch Paper Company, Sandusky, Ohio. Compartmented container. 2,450,419, Oct. 5.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., and Easter.

Celotex Corporation, The, assignee: *See*—
Muench, Carl G.

Chandler, Milton E., New Britain, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Control apparatus for internal-combustion engines. 2,450,826, Oct. 5.

Chapman, Harold D.: *See*—
Caldwell, Hamilton P., Jr., and Chapman.

Chase, Ernest E., E. S. Nokes, and F. E. Stratton, Beverly, and W. V. Goodhue, Ipswich, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Armed turret. 2,450,541, Oct. 5.

Chemical Developments Corporation, assignee: *See*—
Drummond, Folsom E.
Velten, Edmund M.

Chittick, Charles Y., Waban, Mass. Kitchen utensil. 2,450,716, Oct. 5.

Clare, Mabel K., assignee: *See*—
Clare, Martin L.

Clare, Mabel K., executrix: *See*—
Clare, Martin L.

Clare, Martin L., deceased, Appollo, Pa.; M. K. Clare, executrix, assignor to M. K. Clare. Folding table. 2,450,827, Oct. 5.

Clark, Alfred, Bartlesville, Okla., assignor to Phillips Petroleum Company. Synthesis of hydrocarbons. 2,450,500, Oct. 5.

Clark, Charles L., Brockway, Pa. Polarized house wiring receptacle and plug. 2,450,467, Oct. 5.

Clark, Donald H., Stockton, Calif. Garden tractor. 2,450,749, Oct. 5.

Clarkson, John L., Nashville, Ill. Conveyer chain. 2,450,501, Oct. 5.

Clayton, James O., Berkeley, assignor to California Research Corporation, San Francisco, Calif. Compounded oil. 2,450,633, Oct. 5.

Cline, Cranmore W., United States Navy, Jacksonville, Fla. Variable pitch impeller. 2,450,420, Oct. 5.

Codman, F. L. & J. C., assignee: *See*—
Ogden, Floyd H.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,850, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,851, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,852, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,853, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,854, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,855, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,856, Oct. 5.

Colbert, William H., and A. R. Weinrich, Brackenridge, Pa., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Coating by evaporating metals. 2,450,857, Oct. 5.

Coles, Harold W., Rochester, N. Y., assignor to Joseph E. Seagram & Sons, Inc., Shively, Ky. Recovering dextrins from stillage sirup. 2,450,717, Oct. 5.

Collins, Henry H., Bryn Mawr, Pa. Combination headrest and backrest in a beach or lawn chair. 2,450,783, Oct. 5.

Colombu, Eugène: *See*—
De Lacotte, Robert H., and Colombu.

Commonwealth Engineering Company, of Ohio, The, assignee: *See*—
Fisher, John R., Jr.

Comptoir Des Textiles Artificiels, assignee: *See*—
De Lacotte, Robert H., and Colombu.

Consolidated Engineering Corporation, assignee: *See*—
Washburn, Harold W.

Consolidated Mining and Smelting Company, of Canada, Limited, The, assignee: *See*—
Legeçe, Robert, and Jones.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Havens, Glenn G.

Continental Can Company, Inc., assignee: *See*—
Goldsworthy, Norman H.
Kronquest, Alfred L.

Conveyor and Machinery Manufacturers, assignee: *See*—
Herrmann, John G.

Conzelman, John E., Jr., assignor to Solar Aircraft Company, San Diego, Calif. Tube bender. 2,450,580, Oct. 5.

Cornelius, Richard T., Minneapolis, Minn. Motor-driven compressor. 2,450,468, Oct. 5.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Couty, Norman M., Detroit, Mich., assignor, by mesne assignments, to The Flex-O-Tube Company, Chicago, Ill. Swivel connection. 2,450,581, Oct. 5.

Coyle, Lyof M., Babakin, Western Australia, Australia. Spring type toolholder. 2,450,582, Oct. 5.

Crane, Carl J., Dayton, Ohio. Apparatus for simulating wind effects in aviation ground trainers. 2,450,421, Oct. 5.

Crompton & Knowles Loom Works, assignee: *See*—
Dion, Raymond F.
Palmer, Albert, and Sepavich.
Schedin, Robert S.
Sepavich, Victor F., and Kronoff.

Crown Cork & Seal Company, Inc., assignee: *See*—
Glock, Charles E.

Crozier, Alva H., Cheyenne, Wyo. Seed potato cutter, including an endless conveyer feeding to a stationary cutter. 2,450,583, Oct. 5.

Culdice, Charles W., Wentworth, Wis. Nonhide cutting fleshing tool. 2,450,502, Oct. 5.

Cutler-Hammer, Inc., assignee: *See*—
Kuhn, Clarence W.

Daiger, George P.: *See*—
Troxler, Charles G., and Daiger.

Darnell, Victor L., Centerville, assignor to The Master Electric Company, Dayton, Ohio. Hoist. 2,450,718, Oct. 5.

Davis, Lee Y., Atlanta, Ga. Horse collar. 2,450,719, Oct. 5.

Davis, Orris L.: *See*—
Nixon, Alan C., and Davis.

Dean, Russell T., Stamford, and E. O. Hook, Darien, Conn., assignors to American Cyanamid Company, New York, N. Y. Production of thiodihydracrylic acids. 2,450,634, Oct. 5.

De Lacotte, Robert H., and E. Colombu, Paris, France, assignors to Comptoir Des Textiles Artificiels. Spinning bath tank. 2,450,750, Oct. 5.

De Martin, Anthony E., Derby, Conn. Radius tool. 2,450,469, Oct. 5.

Dembenski, Joseph B., Nanticoke, Pa. Sanitary dental floss holder. 2,450,635, Oct. 5.

Denton, William I.: *See*—
Marisic, Milton M., Denton, and Bishop.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,636, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,637, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,638, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of aromatic nitriles. 2,450,639, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,640, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,641, Oct. 5.

Denton, William I., Woodbury, and R. B. Bishop, Haddonfield, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of nitriles. 2,450,642, Oct. 5.

De Vaney, Fred D., assignor to Erie Mining Company, Hibbing, Minn. Froth flotation of siliceous gangue from an alkaline magnetic iron ore pulp with an amine. 2,450,720, Oct. 5.

Diebold, Incorporated, assignee: *See*—
Magaw, Ronald R., and Miller.

Diessel, Anton E., assignor to International Shoe Company, St. Louis, Mo. Shoe machine. 2,450,643, Oct. 5.

Dion, Raymond F., Leominster, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Electronically controlled motor-driven loom letoff. 2,450,470, Oct. 5.

Ditsler, Walter H., Columbus, Nebr. Wheeled scooping device. 2,450,721, Oct. 5.

Dodge, Lysander H., Huntington Beach, Calif. Flashlight attachment for small arms. 2,450,584, Oct. 5.

Donaldson, Jack D., Tacoma, Wash. Maximum load indicating gauge. 2,450,644, Oct. 5.

Dorkin, Jess J., Brooklyn, N. Y. Necktie forming device. 2,450,471, Oct. 5.

D'Ouville, Edmond L., Chicago, Ill., and D. E. Burney, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Sulfonation process. 2,450,585, Oct. 5.

Dow Chemical Company, The, assignee: *See*—
Dreisbach, Robert R., and Heusted.
McIntire, Otis R.
Robinson, Harold A.

Doyle, Frank B., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Freezing food. 2,450,645, Oct. 5.

Dreisbach, Robert R., and G. B. Heusted, assignors to The Dow Chemical Company, Midland, Mich. Making methyl hydroxy-isopropyl keton. 2,450,646, Oct. 5.

Drije, Miles, Berwyn, Ill. Bracket. 2,450,722, Oct. 5.

Drummond, Folsom E., Westfield, N. J., assignor to Chemical Developments Corporation, Dayton, Ohio. Forming plastic coating compositions on surfaces. 2,450,503, Oct. 5.

Duffin, Walter M., Dartford, and S. Wilkinson, Beckenham, England, assignors to Therapeutic Research Corporation of Great Britain, Limited. Resolution of N-formylisopropylidene-penicillamine. 2,450,784, Oct. 5.

Dunham, Le Roy S., East Orange, and E. O. Jegge, Glen Ridge, assignors to Thomas A. Edison, Incorporated, West Orange, N. J. Alkaline primary battery. 2,450,472, Oct. 5.

Dunn, Frank R.: *See*—
Callaway, Clarence R., and Dunn.

Dunning, John W., and E. C. Lathrop, Peoria, Ill., assignors to The United States of America as represented by the Secretary of Agriculture. Saccharifying plant materials. 2,450,586, Oct. 5.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Flenner, Albert L.

Durakool, Inc., assignee: *See*—
Bucklen, Herbert E., III.

Eagle-Picher Company, The, assignee: *See*—
Harner, Harold R., Lindemuth, and Jones.

Easter, Donald P.: *See*—
Bludworth, Joseph E., and Easter.

Eastman Kodak Company, assignee: *See*—
Allen, Charles F. H., and Bell.
Bliss, Lester E.
Carroll, Burt H.
Elwood, Calvin A.
Hagemeyer, Hugh J., Jr.
Hutchison, Miller R., Jr.
MacNeille, Stephen M.

Edison, Thomas A., Incorporated, assignee: *See*—
Dunham, Le Roy S., and Jegge.

Elastic Stop Nut Corporation of America, assignee: *See*—
Sauer, John A.

Elgersma, Alta M., assignee: *See*—
Elgersma, Theodore M.

Elgersma, Theodore M., assignor of one-half to A. M. Elgersma, Fresno, Calif. Poultry bit. 2,450,587, Oct. 5.

Elks, William J., United States Navy. Dynamoelectric machine mount. 2,450,422, Oct. 5.

Elrad, William R., University Heights, Ohio. Bed rail blank. 2,450,723, Oct. 5.

Elwood, Calvin A., assignor to Eastman Kodak Company, Rochester, N. Y. Constant flow pump. 2,450,751, Oct. 5.

Emmer, Charles E., assignor to General Binding Corporation, Chicago, Ill. Binding. 2,450,785, Oct. 5.

Eppich, Elizabeth, Cleveland, Ohio. Hair curler. 2,450,542, Oct. 5.

Erie Mining Company, assignee: *See*—
De Vaney, Fred D.

Erskine, Robert A.: *See*—
Lane, Albert M., Kirkpatrick, and Erskine.

Essick, Bryant, Los Angeles, Calif. Blower. 2,450,647, Oct. 5.

Evering, Bernard L., Chicago, Ill., A. P. Lien, Hammond, Ind., and J. M. Page, Jr., assignors to Standard Oil Company, Chicago, Ill. Desulfurization of oils. 2,450,588, Oct. 5.

Faber, Ralph L., assignee: *See*—
Lomasney, Edmond P.

Factory Mutual Research Corporation, assignee: *See*—
Thompson, Norman J.

Falconbridge Nickel Mines, Limited, assignee: *See*—
Gronningsaeter, Anton M. and Hemmeren.

Falk, Charles T.: *See*—
Falk, Joseph M., and C. T.

Falk, Joseph M. and C. T., Kansas City, Mo. Top-stiffening tie bar for open-top trucks. 2,450,589, Oct. 5.

Fallon, Thomas F.: *See*—
Reinhardt, Otto K., and Fallon.

Farrell, Joseph K. O., London, England. Curler. 2,450,752, Oct. 5.

Farson, Ernest G., Xenia, Ohio. Screw driver having removable ratchet grip. 2,450,504, Oct. 5.

Felzer, Joseph, Los Angeles, Calif. Vehicle lift. 2,450,648, Oct. 5.

Ferguson, Albert G., Houston, Tex., assignor to American Associated Companies, Inc., Atlanta, Ga. Wall covering and applying same. 2,450,786, Oct. 5.

Fidao, Maxine C., assignee, trustee, et al.: *See*—
Robinson, William B., and Swenson.

Finch, William G. H., Newtown, Conn. Facsimile synchronizing system. 2,450,649, Oct. 5.

Fisher, John R., Jr., assignor to The Commonwealth Engineering Company of Ohio, Dayton, Ohio. Dry-cleaning emulsion. 2,450,505, Oct. 5.

Fitzpatrick, J. D., and L. D. Myers, Cincinnati, Ohio. Oxidizing unsaturated fatty bodies. 2,450,858, Oct. 5.

Fleming, Howard M., West Orange, assignor to Monroe Calculating Machine Company, Orange, N. J. Crawl carry mechanism. 2,450,787, Oct. 5.

Flenner, Albert L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Herbicidal composition. 2,450,543, Oct. 5.

Flex-O-Tube Company, The, assignee: *See*—
Couty, Norman M.

Flogaus, Howard A., Wallingford, Pa., assignor to A C F-Brill Motors Company, New York, N. Y. Vehicle suspension. 2,450,506, Oct. 5.

Flogaus, Howard A., Wallingford, Pa., assignor to A C F-Brill Motors Company, New York, N. Y. Vehicle wheel. 2,450,507, Oct. 5.

Flowers, Leola W.: *See*—
Flowers, Ralph G. and L. W.

Flowers, Ralph G. and L. W., Pittsfield, Mass., assignors to General Electric Company. Electric capacitor. 2,450,650, Oct. 5.

Focht, Carl W., South Williamsport, Pa., assignor of one-half to The Valley National Bank of Phoenix, Phoenix, Ariz. Lens marking gauge. 2,450,651, Oct. 5.

Foley, Charles F., Bloomington, Ill., assignor to Eureka Williams Corporation. Bag coupling. 2,450,544, Oct. 5.

Foster, Harry K., Pittsburgh, Pa. Baton. 2,450,545, Oct. 5.

Foster, Theodore, assignor to The Monarch Machine Tool Company, Sidney, Ohio. Lathe attachment. 2,450,788, Oct. 5.

Fowler, Arthur H.: *See*—
Vokes, Cecil G., and Fowler.

Francis, Alfred W., Woodbury, and C. H. Schlesman, Camden, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Alkyl benzenes. 2,450,652, Oct. 5.

Frank, Edward J.: *See*—
Boisseau, Alexander C., Beall, Frank, and Lowery.

Fraser, John W., Detroit, Mich., and L. Gordon, Eatontown, N. J. Terminal structure. 2,450,423, Oct. 5.

Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Co. Moldable reaction products of sulfur dioxide and olefins. 2,450,424, Oct. 5.

Frieman, Jocob G., Tiffin, Ohio. Sanitary garment. 2,450,789, Oct. 5.

Frisby, Frank D., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo. Retaining ring. 2,450,425, Oct. 5.

Frye, Jack, Broomfield, Abbots Langley, England. Milling machine control gear. 2,450,546, Oct. 5.

Fuller, Everett E.: *See*—
Berger, Henry G., Noland, and Fuller.

Fullman, James B.: *See*—
Thompson, George J., Koester, Jr., and Fullman.

Galley, John H., Los Angeles, Calif., and L. J. Carey, assignors to The Marquette Metal Products Company, Cleveland, Ohio. Reciprocating expansible chamber windshield wiper motor with shaft operated snap action distributing valve plungers. 2,450,653, Oct. 5.

Gaylor, Peter J., Union County, N. J. Continuous process for making solid polymer. 2,450,547, Oct. 5.

Geigy, J. R., A.-G., assignee: *See*—
Biedermann, Robert.

General Binding Corporation, assignee: *See*—
Emmer, Charles E.

General Electric Company, assignee: *See*—
Anderson, Harold W.
Boisseau, Alexander C., Beall, Frank, and Lowery.
Bondley, Ralph J.
Flowers, Ralph G. and L. W.
Gisolf, Jacob H., Kröger, and Bakker.
Jones, Ray D.
Northlander, Birger W.
Thomas, Charles A.

General Electric Company, Limited, The, assignee: *See*—
Stenning, Luis C.

General Motors Corporation, assignee: *See*—
Stevens, Clarence C.

General Tire & Rubber Company, The, assignee: *See*—
Te Grotenhuis, Theodore A.

Gerber, Dale C., assignor to The Hoover Company, North Canton, Ohio. Converter for suction cleaners. 2,450,828, Oct. 5.

Gilbert, A. C., Company, The, assignee: *See*—
Smith, William R.

Gisolf, Jacob H., F. A. Kröger, and J. Bakker, Eindhoven, Netherlands, assignors to General Electric Company, Schenectady, N. Y. Erythemal phosphor. 2,450,548, Oct. 5.

Gleitman, Harold, New Rochelle, and D. Hoenig, St. Albans, N. Y., said Hoenig assignor to said Gleitman. Automatic adjustable chair. 2,450,654, Oct. 5.

Glock, Charles E., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Tin plate treatment. 2,450,508, Oct. 5.

Glock, Charles E., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Tin plate treatment. 2,450,509, Oct. 5.

Goldie, Hector E., assignor to Rubenstein Bros. Company, Montreal, Quebec, Canada. Abrading device. 2,450,473, Oct. 5.

Goldsworthy, Norman H., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Spot welding metal keys to metal can ends. 2,450,655, Oct. 5.

Goodhue, William V.: *See*—
Chase, Ernest E., Nokes, Stratton, and Goodhue.

Goodrich, B. F., Company, The, assignee: *See*—
Wilson, Matthew W.

Goodyear Corporation, assignee: *See*—
Wiseberger, Paul M.

Gordon, Louis: *See*—
Fraser, John W., and Gordon.

Gowland, John P., Woking, England. Printing appliance. 2,450,656, Oct. 5.

Gradex, Inc., assignee: *See*—
Moore, Milford B.

Greaves, Albert H., London, assignor of forty per cent to R. V. Short, Haxby, England. Gas burner. 2,450,790, Oct. 5.

Greentree, Alexander, Paulsboro, N. J., assignor, by mesne assignments, to L. Caldwell, Los Angeles, Calif. Decolorizing vegetable oils with ferric salts and silicates. 2,450,549, Oct. 5.

Griffin, John B., Oakville, and A. W. Hagan, Stratford, Conn., assignors to United States Rubber Company, New York, N. Y. Locking slider for slide fasteners. 2,450,550, Oct. 5.

Grobner, Walter, Wallington, N. J., assignor to Botany Worsted Mills. Making practice golf balls. 2,450,474, Oct. 5.

Gronningsaeter, Anton M., New York, N. Y., and B. G. Hommeren, Kristiansand S., Norway, assignors to Falconbridge Nickel Mines, Limited, Toronto, Ontario, Canada. Electrolytic refining of nickel. 2,450,426, Oct. 5.

Grote, Henry W., Downers Grove, assignor to Universal Oil Products Company, Chicago, Ill. Conversion of sulfur containing hydrocarbons. 2,450,724, Oct. 5.

Grunden, Reed M.: *See*—
Cassidy, John H., and Grunden.

Gruver, John H., East Cleveland, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del. Embossing machine carriage. 2,450,725, Oct. 5.

Gruver, John H., East Cleveland, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del. Margin stop mechanism for embossing machine carriages. 2,450,726, Oct. 5.

Guernsey, Max M., Steilacoom, Wash. Electric plug. 2,450,657, Apr. 5.

Gulf Research & Development Company, assignee: *See*—
McCarthy, Paul R.

Gullo, Frank C., Cupertino, Calif. Fruit drier. 2,450,590, Oct. 5.

Guyer, Jesse A., Bartlesville, Okla., assignor to Phillips Petroleum Company. Apparatus and process for hydrocarbon conversion. 2,450,753, Apr. 5.

Hagan, Albert W.: *See*—
Griffin, John B., and Hagan.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Preparing enol acetates of alpha-diketones. 2,450,754, Oct. 5.

Hagen, Arthur H., Globe, Ariz. Pliers with link connected handle and jaw. 2,450,791, Oct. 5.

Hall, Elisha W., Scituate, Mass. Abrading element. 2,450,792, Oct. 5.

Hall, Elisha W., Scituate, Mass. Abrading element. 2,450,793, Oct. 5.

Halpert, Percy, Hempstead, N. Y., assignor to The Sperry Corporation. Servo units for automatic pilots. 2,450,427, Oct. 5.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Gas discharge oscillator. 2,450,475, Oct. 5.

Hansford, Rowland C.: *See*—
Rasmussen, Herbert E., and Hansford.

Hansford, Rowland C., and H. E. Rasmussen, Woodbury, N. J., C. G. Myers, Bryn Mawr, Pa., and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of thiophene. 2,450,658, Oct. 5.

Hansford, Rowland C., H. E. Rasmussen, and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Sulfur and hydrocarbon reactions and products. 2,450,659, Oct. 5.

Hanson, Peter P., Pocahontas, Iowa. Milk can strainer accommodating attachment. 2,450,510, Oct. 5.

Hardy, Gordon W., Euclid, assignor to The Marquette Metal Products Company, Cleveland, Ohio. Forming propeller hubs. 2,450,660, Oct. 5.

Harner, Harold R., R. L. Lindemuth, and A. L. Jones, Joplin, Mo., assignors to The Eagle-Picher Company, Cincinnati, Ohio. Apparatus for diverting mineral wool from blow rooms. 2,450,511, Oct. 5.

Harrington, Joseph, Jr., Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fire control mechanism for guns. 2,450,551, Oct. 5.

Harris, Carl C., Orange, Mass. One-piece wooden body pencil. 2,450,476, Oct. 5.

Harris, Elmer F., Birmingham, Ala., assignor, by mesne assignments, to Carnegie-Illinois Steel Corporation. Electrodeposition of tin. 2,450,794, Oct. 5.

Harris, Elmer F., Birmingham, Ala., assignor, by mesne assignments, to Carnegie-Illinois Steel Corporation. Electrodeposition of tin. 2,450,795, Oct. 5.

Hartford National Bank and Trust Company, trustee, assignee: *See*—
